

FOR IMMEDIATE RELEASE

Northern Virginia-Based HealthCelerate to Sponsor the 22nd Annual TIPAAA National Meeting

*Conference will convene Independent Practice Association (IPA) Leaders and
Physicians from around the country*

Ashburn, VA – March 20, 2017 – HealthCelerate, an innovative solution provider dedicated to improving how patient medical records and other health information are exchanged between clinicians, today announced that the company will sponsor and present at the 22nd Annual National Meeting of The Independent Physician Association of America (TIPAAA). Participating in the event will be physicians, medical directors, health plan professionals, IPA administrators, and many others from across the country, seeking to improve how their groups can effectively manage their practices while delivering high-quality care to their patient populations.

HealthCelerate's recently unveiled [Universal Health Record Interchange](#):

- Eliminates paper information exchange processes
- Improves patient information available at the point of care
- Eliminates the cost and complexity of integration projects between disparate systems
- Supports Meaningful Use II and III, as well as MIPS and MACRA requirements
- Empowers the patient care team to get the job done

CEO, Dr. Peter S. Tippet, will present an education session about “Making Health IT Work for You in a BigSoMoClo World”, focusing on how the Big Data-Social-Mobile-Cloud revolution provides new opportunities for physicians to share patient medical records, improve efficiency and collaboration among independent practices, and better serve patient needs with technology.

The [TIPAAA Annual Meeting](#) is being held March 23-25, 2017 in San Antonio, TX.

About HealthCelerate

HealthCelerate was founded in 2015, and is dedicated to improving the sharing of patient health information by leveraging an entirely new approach to allow data to flow freely and securely between hospitals and clinicians, regardless of which vendors they use or where they are located. Our proprietary, HIPAA-compliant interchange was custom-designed to enable unprecedented EMR interoperability with an architecture that lowers complexity, increases security, privacy, and universal access, and can simultaneously allow for turnkey integration into legacy systems.
