

Who We Are: Maternal & Infant Health Consulting (M&IHC)

Maternal & Infant Health Consulting (M&IHC) is a woman-owned social impact consulting firm whose mission is to bridge the gap between global health research and program implementation. To achieve that mission, we focus our work on research, communications, and strategic planning in the core areas of reproductive health, nutrition, micronutrients, digital health, and community health.

M&IHC is based in the United States of America and has worked in over 50 countries. M&IHC's Hub of Global Health Independent Contractors is trusted by a diverse array of clients, including PATH, Population Services International (PSI), and the Food and Drug Administration (FDA). M&IHC is hiring Independent Contractors to serve as part-time and remote Global Health Nutrition Researchers.

The Roles: Global Nutrition Researchers

The Global Health Researchers will support an upcoming research project focused on nutrition and micronutrients. These positions report directly to M&IHC's Executive Director and will work in collaboration with other individuals from M&IHC's Hub of Independent Contractors. These are contract roles that are 100% remote. The consultants will support this project on a part-time basis of 15-25 hours per week with a flexible schedule, largely up to the discretion of the candidate and confirmed prior to the position start date. We are hiring multiple researchers to support this work. We are looking for both individuals with qualitative experience and individuals with quantitative experience.

Responsibilities:

- Lead and Collaborate on Global Nutrition Research
 - Lead the design, execution, analysis, and presentation for a mixed methods research project. This will include collaborating with partners and stakeholders to design qualitative and quantitative research protocol tools in English. This protocol will undergo an Institutional Review Board (IRB) review process in the US and abroad.
 - Once approved, the Nutrition Research Team will support the participant recruitment and data collection process that is being executed by a predominantly local research team.
 - As data is received and transcribed, the Nutrition Research Team will execute qualitative and quantitative data analysis, in collaboration with a co-researcher.
 - Data analysis will include collectively designing a codebook, conducting a qualitative statistical analysis (NVivo, Dedoose, etc.), executing a quantitative data analysis (Stata, R, Excel, etc.), and creating a report and/or presentation highlighting the research findings.
 - Recommendations from the report and/or presentation will support several years of program implementation that works to bridge the gap between research and program implementation.

Qualifications

- Experience working in global public health, ideally in one or more of M&IHC's core areas
- Experience working in nutrition and/or micronutrients
- Masters Degree, in a relevant field
- Experience conducting research
- Strong writing and editing skills
- Strong organizational and communications skills
- Demonstrated ability to work independently, with limited supervision, as well as in teams
- Fluent in English

Apply Now:

- Applications must be submitted directly to M&IHC's website in order to be reviewed for consideration: <https://www.mihealthconsulting.com/connect> links to <http://tinyurl.com/3hecpcwb>
- Upload your CV, cover letter, and a writing sample with your application
- Ideally, the writing sample will be a document which you were either the sole author of or one of a few authors. This can be an excerpt of a larger document or one single document. Ideally, these will be 2-4 page documents and on a global health topic.
- Deadline to Apply: April 10, 2024
