Plant and Animal Needs

Use observations to describe patterns of what plants and animals (including humans) need to survive. (Analyzing and Interpreting Data)

Weather Patterns

Use and share observations of local weather conditions to describe patterns over time. (Analyzing and Interpreting Data)

Environmental Change

Construct an argument supported by evidence for how plants and animals (including humans) can change the environment to meet their needs. (Systems and System Models)

Environmental Relationships

Use a model to represent the relationship between the needs of different plants and animals (including humans) and the places they live. (Systems and System Models)

Forecasting Severe Weather

Ask questions to obtain information about the purpose of weather forecasting to prepare for, and respond to, severe weather. (Cause and Effect)

Environmental Solutions

Communicate solutions that will reduce the impact of humans on the land, water, air, and/or other living things in the local environment. (Cause and Effect)

Pushes, Pulls, and Motion

Plan and conduct an investigation to compare the effects of different strengths or different directions of pushes and pulls on the motion of an object. (Cause and Effect)

Motion Design Solution

Analyze data to determine if a design solution works as intended to change the speed or direction of an object with a push or a pull. (Cause and Effect)
Clarification Statement: Examples of qualitative observations could include descriptions of the weather (such as sunny, cloudy, rainy, and warm); examples of quantitative observations could include numbers of sunny, windy, and rainy days in a month. Examples of patterns could include that it is usually cooler in the morning than in the afternoon and the number of sunny days versus cloudy days in different months.

Assessment Boundary: Assessment of quantitative observations limited to whole numbers and relative measures such as warmer/cooler or chemical reaction level.

Clarification Statement: Examples of patterns could include that animals need to take in food but plants do not; the different kinds of food needed by different types of animals; the requirement of plants to have light; and, that all living things need water.

Assessment Boundary: none

Clarification Statement: Examples of relationships could include that deer eat buds and leaves, therefore, they usually live in forested areas; and, grasses need sunlight so they often grow in meadows. Plants, animals, and their surroundings make up a system.

Assessment Boundary: none

Clarification Statement: Examples of human impact on the land could include cutting trees to produce paper and using resources to produce bottles. Examples of solutions could include reusing paper and recycling cans and bottles.

Assessment Boundary: none

Clarification Statement: Examples of pushes or pulls could include a string attached to an object being pulled, a person pushing an object, a person stopping a rolling ball, and two objects colliding and pushing on each other.

Assessment Boundary: Assessment is limited to different relative strengths or different directions, but not both at the same time. Assessment does not include non-
Sunlight Warms the Earth

Make observations to determine the effect of sunlight on Earth’s surface. (Cause and Effect)

Shade Structure Design

Use tools and materials provided to design and build a structure that will reduce the warming effect of sunlight on an area. (Cause and Effect)

Biomimicry Design Solution

Use materials to design a solution to a human problem by mimicking how plants and/or animals use their external parts to help them survive, grow, and meet their needs. (Structure and Function)

Behavior - Parents and Offspring

Read texts and use media to determine patterns in behavior of parents and offspring that help offspring survive.

Plant and Animal Structures - Parents and Offspring

Make observations to construct an evidence-based account that young plants and animals are like, but not exactly like, their parents. (Patterns)

Sun, Moon, and Star Patterns

Use observations of the sun, moon, and stars to describe patterns that can be predicted.

Seasonal Sunlight

Make observations at different times of year to relate the amount of daylight to the time of year. (Patterns)

Sound and Vibrating Materials

Plan and conduct investigations to provide evidence that vibrating materials can make sound and that sound can make materials vibrate. (Cause and Effect)
Clarification Statement: Examples of structures could include umbrellas, canopies, and tents that minimize the warming effect of the sun.

Assessment Boundary: none

Clarification Statement: Examples of Earth’s surface could include sand, soil, rocks, and water

Assessment Boundary: Assessment of temperature is limited to relative measures such as warmer/cooler.

Clarification Statement: Examples of patterns of behaviors could include the signals that offspring make (such as crying, cheeping, and other vocalizations) and the responses of the parents (such as feeding, comforting, and protecting the offspring).

Assessment Boundary: none

Clarification Statement: Examples of patterns of behaviors could include the signals that offspring make (such as crying, cheeping, and other vocalizations) and the responses of the parents (such as feeding, comforting, and protecting the offspring).

Assessment Boundary: none

Clarification Statement: Examples of patterns could include that the sun and moon appear to rise in one part of the sky, move across the sky, and set; and stars other than our sun are visible at night but not during the day.

Assessment Boundary: Assessment of star patterns is limited to stars being seen at night and not during the day.

Clarification Statement: Examples of patterns could include features plants or animals share. Examples of observations could include leaves from the same kind of plant are the same shape but can differ in size; and, a particular breed of dog looks like its parents but is not exactly the same.

Assessment Boundary: Assessment does not include inheritance or animals that undergo metamorphosis or hybrids.

Clarification Statement: Examples of patterns could include that the sun and moon appear to rise in one part of the sky, move across the sky, and set; and stars other than our sun are visible at night but not during the day.

Assessment Boundary: Assessment of star patterns is limited to stars being seen at night and not during the day.

Clarification Statement: Emphasis is on relative comparisons of the amount of daylight in the winter to the amount in the spring or fall.

Assessment Boundary: Assessment is limited to relative amounts of daylight, not quantifying the hours or time of daylight.

Clarification Statement: Examples of vibrating materials that make sound could include tuning forks and plucking a stretched string. Examples of how sound can make matter vibrate could include holding a piece of paper near a speaker making sound and holding an object near a vibrating tuning fork.

Assessment Boundary: none
Illumination and Darkness

Make observations to construct an evidence-based account that objects in darkness can be seen only when illuminated. (Cause and Effect)

Light and Materials

Plan and conduct investigations to determine the effect of placing objects made with different materials in the path of a beam of light. (Cause and Effect)

Communication Device Design

Use tools and materials to design and build a device that uses light or sound to solve the problem of communicating over a distance. (Connection to Engineering and Technology)

Environmental Plant Needs

Plan and conduct an investigation to determine if plants need sunlight and water to grow. (Cause and Effect)

Seed Dispersal and Pollination

Develop a simple model that mimics the function of an animal in dispersing seeds or pollinating plants. (Structure and Function)

Habitats and Biodiversity

Make observations of plants and animals to compare the diversity of life in different habitats. (Patterns)

Earth Events - Slow and Quick

Use information from several sources to provide evidence that earth events can occur quickly or slowly. (Stability and Change)

Erosion Design Solution

Compare multiple solutions designed to slow or prevent wind or water from changing the shape of the land. (Stability and Change)
Clarification Statement: Examples of materials could include those that are transparent (such as clear plastic), translucent (such as wax paper), opaque (such as cardboard), and reflective (such as a mirror).

**Assessment Boundary:** Assessment does not include the speed of light.

---

Clarification Statement: Examples of observations could include those made in a completely dark room, a pinhole box, and a video of a cave explorer with a flashlight. Illumination could be from an external light source or by an object giving off its own light.

**Assessment Boundary:** none

---

Clarification Statement: none

**Assessment Boundary:** Assessment is limited to testing one variable at a time

---

Clarification Statement: Examples of devices could include a light source to send signals, paper cup and string “telephones,” and a pattern of drum beats.

**Assessment Boundary:** Assessment does not include technological details for how communication devices work.

---

Clarification Statement: Emphasis is on the diversity of living things in each of a variety of different habitats.

**Assessment Boundary:** Assessment does not include specific animal and plant names in specific habitats.

---

Clarification Statement: Examples of solutions could include different designs of dikes and windbreaks to hold back wind and water, and different designs for using shrubs, grass, and trees to hold back the land.

**Assessment Boundary:** none

---

Clarification Statement: Examples of events and timescales could include volcanic explosions and earthquakes, which happen quickly and erosion of rocks, which occurs slowly.

**Assessment Boundary:** Assessment does not include quantitative measurements of timescales.
Mapping Land and Water

Develop a model to represent the shapes and kinds of land and bodies of water in an area. (Patterns)

Water on Earth

Obtain information to identify where water is found on Earth and that it can be solid or liquid. (Patterns)

Material Properties

Plan and conduct an investigation to describe and classify different kinds of materials by their observable properties. (Patterns)

Materials Testing

Analyze data obtained from testing different materials to determine which materials have the properties that are best suited for an intended purpose. (Cause and Effect)

Objects and Pieces

Make observations to construct an evidence-based account of how an object made of a small set of pieces can be disassembled and made into a new object. (Energy and Matter)

Reversible and Irreversible Changes

Construct an argument with evidence that some changes caused by heating or cooling can be reversed and some cannot. (Cause and Effect)

Plant and Animal Life Cycles

Develop models to describe that organisms have unique and diverse life cycles but all have in common birth, growth, reproduction, and death. (Patterns)

Animal Groups

Construct an argument that some animals form groups that help members survive. (Cause and Effect)
Clarification Statement: none
Assessment Boundary: none

Clarification Statement: Examples of properties could include, strength, flexibility, hardness, texture, and absorbency.
Assessment Boundary: Assessment of quantitative measurements is limited to length.

Clarification Statement: Examples of reversible changes could include materials such as water and butter at different temperatures. Examples of irreversible changes could include cooking an egg, freezing a plant leaf, and heating paper.
Assessment Boundary: none

Clarification Statement: None
Assessment Boundary: none

Clarification Statement: Changes organisms go through during their life form a pattern.
Assessment Boundary: Assessment of plant life cycles is limited to those of flowering plants. Assessment does not include details of human reproduction.
Inheritance and Variation of Traits
Analyze and interpret data to provide evidence that plants and animals have traits inherited from parents and that variation of these traits exists in a group of similar organisms. (Patterns)

Environmental Influence on Traits
Use evidence to support the explanation that traits can be influenced by the environment. (Cause and Effect)

Fossil Evidence of Past Environments
Analyze and interpret data from fossils to provide evidence of the organisms and the environments in which they lived long ago. (Scale, Proportion, and Quantity)

Variation, Survival, and Reproduction
Use evidence to construct an explanation for how the variations in characteristics among individuals of the same species may provide advantages in surviving, finding mates, and reproducing. (Cause and Effect)

Habitats and Organism Survival
Construct an argument with evidence that in a particular habitat some organisms can survive well, some survive less well, and some cannot survive at all. (Cause and Effect)

Environmental Change Solution
Make a claim about the merit of a solution to a problem caused when the environment changes and the types of plants and animals that live there may change. (Systems and System Models)

Seasonal Weather Conditions
Represent data in tables and graphical displays to describe typical weather conditions expected during a particular season. (Patterns)

World Climates
Obtain and combine information to describe climates in different regions of the world. (Patterns)
Clarification Statement: Examples of the environment affecting a trait could include normally tall plants grown with insufficient water are stunted; and, a pet dog that is given too much food and little exercise may become overweight.

Assessment Boundary: none

Clarification Statement: Examples of cause and effect relationships could be plants that have larger thorns than other plants may be less likely to be eaten by predators; and, animals that have better camouflage coloration than other animals may be more likely to survive and therefore more likely to leave offspring.

Assessment Boundary: none

Clarification Statement: Examples of environmental changes could include changes in land characteristics, water distribution, temperature, food, and other organisms.

Assessment Boundary: Assessment is limited to a single environmental change. Assessment does not include the greenhouse effect or climate change.

Clarification Statement: Examples of the similarities and differences in traits shared between offspring and their parents, or among siblings. Emphasis is on organisms other than humans.

Assessment Boundary: Assessment does not include genetic mechanisms of inheritance and prediction of traits. Assessment is limited to non-human examples.

Clarification Statement: Examples of data could include average temperature, precipitation, and wind direction.

Assessment Boundary: Assessment of graphical displays is limited to pictographs and bar graphs. Assessment does not include climate change.

Clarification Statement: Examples of data could include type, size, and distributions of fossil organisms. Examples of fossils and environments could include marine fossils found on dry land, tropical plant fossils found in Arctic areas, and fossils of extinct organisms.

Assessment Boundary: Assessment does not include identification of specific fossils or present plants and animals. Assessment is limited to major fossil types and relative ages.

Clarification Statement: Examples of evidence could include needs and characteristics of the organisms and habitats involved. The organisms and their habitat make up a system in which the parts depend on each other.

Assessment Boundary: none

Clarification Statement: Examples of data could include average temperature, precipitation, and wind direction.

Assessment Boundary: Assessment of graphical displays is limited to pictographs and bar graphs. Assessment does not include climate change.
Weather-Related Hazard Solution

Make a claim about the merit of a design solution that reduces the impacts of a weather-related hazard. (Cause and Effect)

3-ESS3-1

Balanced and Unbalanced Forces

Plan and conduct an investigation to provide evidence of the effects of balanced and unbalanced forces on the motion of an object. (Cause and Effect)

3-PS2-1

Predicting Future Motion

Make observations and/or measurements of an object's motion to provide evidence that a pattern can be used to predict future motion.

3-PS2-2

Electric and Magnetic Forces

Ask questions to determine cause and effect relationships of electric or magnetic interactions between two objects not in contact with each other.

3-PS2-3

Magnetic Design Solution

Define a simple design problem that can be solved by applying scientific ideas about magnets. (Engineering and Technology)

3-PS2-4

Internal and External Structures

Construct an argument that plants and animals have internal and external structures that function to support survival, growth, behavior, and reproduction. (Systems and System Models)

4-LS1-1

Sensation, Processing, and Response

Use a model to describe that animals receive different types of information through their senses, process the information in their brain, and respond to the information in different ways. (Systems and System Models)

4-LS1-2

Evidence from Rock Layers

Identify evidence from patterns in rock formations and fossils in rock layers for changes in a landscape over time to support an explanation for changes in a landscape over time.

4-ESS1-1
Clarification Statement: Examples could include an unbalanced force on one side of a ball can make it start moving; and, balanced forces pushing on a box from both sides will not produce any motion at all.

Assessment Boundary: Assessment is limited to one variable at a time: number, size, or direction of forces. Assessment does not include quantitative force size, only qualitative and relative. Assessment is limited to gravity.

Clarification Statement: Examples of design solutions to weather-related hazards could include barriers to prevent flooding, wind resistant roofs, and lightning rods.

Assessment Boundary: none

Clarification Statement: Examples of an electric force could include the force on hair from an electrically charged balloon and the electrical forces between a charged rod and pieces of paper; examples of a magnetic force could include the force between two permanent magnets, the force between an electromagnet and steel paperclips, and the force exerted by one magnet versus the force exerted by two magnets. Examples of cause and effect relationships could include how the distance between objects affects strength of the force and how the orientation of magnets affects the direction of the magnetic force.

Assessment Boundary: Assessment is limited to forces produced by objects that can be manipulated by students, and electrical interactions are limited to static electricity.

Clarification Statement: Examples of motion with a predictable pattern could include a child swinging in a swing, a ball rolling back and forth in a bowl, and two children on a see-saw.

Assessment Boundary: Assessment does not include technical terms such as period and frequency.

Clarification Statement: Examples of structures could include thorns, stems, roots, colored petals, heart, stomach, lung, brain, and skin.

Assessment Boundary: Assessment is limited to macroscopic structures within plant and animal systems.

Clarification Statement: Examples of problems could include constructing a latch to keep a door shut and creating a device to keep two moving objects from touching each other.

Assessment Boundary: none

Clarification Statement: Examples of evidence from patterns could include rock layers with marine shell fossils above rock layers with plant fossils and no shells, indicating a change from land to water over time; and, a canyon with different rock layers in the walls and a river in the bottom, indicating that over time a river cut through the rock.

Assessment Boundary: Assessment does not include specific knowledge of the mechanism of rock formation or memorization of specific rock formations and layers. Assessment is limited to relative time.

Clarification Statement: Emphasis is on systems of information transfer.

Assessment Boundary: Assessment does not include the mechanisms by which the brain stores and recalls information or the mechanisms of how sensory receptors function.
Weathering and Erosion

Make observations and/or measurements to provide evidence of the effects of weathering or the rate of erosion by water, ice, wind, or vegetation. (Cause and Effect)

Mapping Earth's Features

Analyze and interpret data from maps to describe patterns of earth's features.

Renewable and Non-renewable Energy

Obtain and combine information to describe that energy and fuels are derived from natural resources and their uses affect the environment. (Cause and Effect)

Natural Hazard Design Solution

Generate and compare multiple solutions to reduce the impacts of natural earth processes on humans. (Cause and Effect)

Motion Energy

Use evidence to construct an explanation relating the speed of an object to the energy of that object. (Energy and Matter)

Energy Transfer

Make observations to provide evidence that energy can be transferred from place to place by sound, light, heat, and electric currents. (Energy and Matter)

Energy in Collisions

Ask questions and predict outcomes about the changes in energy that occur when objects collide. (Energy and Matter)

Energy Conversion Device

Apply scientific ideas to design, test, and refine a device that converts energy from one form to another. (Energy and Matter)
Clarification Statement: Maps can include topographic maps of Earth's land and ocean floor, as well as maps of the locations of mountains, continental boundaries, volcanoes, and earthquakes.

Assessment Boundary: none

Clarification Statement: Examples of variables to test could include angle of slope in the downhill movement of water, amount of vegetation, speed of wind, relative rate of deposition, cycles of freezing and thawing of water, cycles of heating and cooling, and volume of water flow.

Assessment Boundary: Assessment is limited to a single form of weathering or erosion.

Clarification Statement: Examples of devices could include electric circuits that convert electrical energy into motion energy of a vehicle, light, or sound; and, a passive solar heater that converts light into heat. Examples of constraints could include the materials, cost, or time to design the device.

Assessment Boundary: Devices should be limited to those that convert motion energy to electric energy or use stored energy to cause

Clarification Statement: Emphasis is on the change in the energy due to the change in speed, not on the forces, as objects interact.

Assessment Boundary: Assessment does not include quantitative measurements of energy.

Clarification Statement: Examples of solutions could include designing an earthquake resistant building and improving monitoring of volcanic activity.

Assessment Boundary: Assessment is limited to earthquakes, floods, tsunamis, and volcanic eruptions.

Clarification Statement: Examples of renewable energy resources could include wind energy, water behind dams, and sunlight; non-renewable energy resources are fossil fuels and fissile materials. Examples of environmental effects could include loss of habitat due to dams, loss of habitat due to surface mining, and air pollution from burning of fossil fuels.

Assessment Boundary: none

Clarification Statement: Examples of renewable energy resources could include wind energy, water behind dams, and sunlight; non-renewable energy resources are fossil fuels and fissile materials. Examples of environmental effects could include loss of habitat due to dams, loss of habitat due to surface mining, and air pollution from burning of fossil fuels.

Assessment Boundary: none

Clarification Statement: Examples of renewable energy resources could include wind energy, water behind dams, and sunlight; non-renewable energy resources are fossil fuels and fissile materials. Examples of environmental effects could include loss of habitat due to dams, loss of habitat due to surface mining, and air pollution from burning of fossil fuels.

Assessment Boundary: none

Clarification Statement: Emphasis is on the change in the energy due to the change in speed, not on the forces, as objects interact.

Assessment Boundary: Assessment does not include quantitative measurements of energy.
Wave Model

Develop a model of waves to describe patterns in terms of amplitude and wavelength and that waves can cause objects to move.

Light and Vision

Develop a model to describe that light reflecting from objects and entering the eye allows objects to be seen. (Cause and Effect)

Information Transfer Solution

Generate and compare multiple solutions that use patterns to transfer information.

Plant Requirements - Air and Water

Support an argument that plants get the materials they need for growth chiefly from air and water. (Energy and Matter)

Environmental Matter Cycling

Develop a model to describe the movement of matter among plants, animals, decomposers, and the environment. (Systems and System Models)

Stellar Brightness and Distance

Support an argument that differences in the apparent brightness of the sun compared to other stars is due to their relative distances from the Earth. (Scale, Proportion, and Quantity)

Daily and Seasonal Sky Changes

Represent data in graphical displays to reveal patterns of daily changes in length and direction of shadows, day and night, and the seasonal appearance of some stars in the night sky.

Earth Sphere Interactions

Develop a model using an example to describe ways the geosphere, biosphere, hydrosphere, and/or atmosphere interact. (Systems and System Models)
Clarification Statement: none

Assessment Boundary: Assessment does not include knowledge of specific colors reflected and seen, the cellular mechanisms of vision, or how the retina works.

Clarification Statement: Examples could include the influence of the ocean on ecosystems, landform shape, and climate; the influence of the atmosphere on landforms and ecosystems through weather and climate; and the influence of mountain ranges on winds and clouds in the atmosphere. The geosphere, hydrosphere, atmosphere, and biosphere are each a system.

Assessment Boundary: Assessment is limited to relative distances, not sizes, of stars. Assessment does not include other factors that affect apparent brightness (such as stellar masses, age, stage).

Clarification Statement: Emphasis is on the idea that matter that is not food (air, water, decomposed materials in soil) is changed by plants into matter that is food. Examples of systems could include organisms, ecosystems, and the Earth.

Assessment Boundary: Assessment does not include molecular explanations.

Clarification Statement: Examples of solutions could include drums sending coded information through sound waves, using a grid of 1’s and 0’s representing black and white to send information about a picture, and using Morse code to send text.

Assessment Boundary: none

Clarification Statement: Emphasis is on the idea that plant matter comes mostly from air and water, not from the soil.

Assessment Boundary: none

Clarification Statement: Examples could include diagrams, analogies, and physical models using wire to illustrate wavelength and amplitude of waves.

Assessment Boundary: Assessment does not include interference effects, electromagnetic waves, non-periodic waves, or quantitative models of amplitude and wavelength.

Clarification Statement: Examples of patterns could include the position and motion of Earth with respect to the sun and selected stars that are visible only in particular months.

Assessment Boundary: Assessment does not include causes of seasons.
Water Availability and Distribution
Describe and graph the amounts and percentages of water and fresh water in various reservoirs to provide evidence about the distribution of water on earth. (Scale, Proportion, and Quantity)

Protecting Earth's Resources and Environment
Obtain and combine information about ways individual communities use science ideas to protect the earth’s resources and environment. (Systems and System Models)

Particle Model of Matter
Develop a model to describe that matter is made of particles too small to be seen. (Scale, Proportion, and Quantity)

Conservation of Matter
Measure and graph quantities to provide evidence that regardless of the type of change that occurs when heating, cooling, or mixing substances, the total weight of matter is conserved. (Scale, Proportion, and Quantity)

Material Properties
Make observations and measurements to identify materials based on their properties. (Scale, Proportion, and Quantity)

Mixing Substances
Conduct an investigation to determine whether the mixing of two or more substances results in new substances. (Cause and Effect)

Earth's Gravitational Force
Support an argument that the gravitational force exerted by earth on objects is directed down. (Cause and Effect)

Food Energy from the Sun
Use models to describe that the energy in animals’ food (used for body repair, growth, motion, and to maintain body warmth) was once energy from the sun. (Energy and Matter)
Clarification Statement: Examples of models could include diagrams, and flow charts.
Assessment Boundary: none

Clarification Statement: Examples of reactions or changes could include phase changes, dissolving, and mixing that form new substances.
Assessment Boundary: Assessment does not include distinguishing mass and weight.

Clarification Statement: Examples of evidence could include adding air to expand a basketball, compressing air in a syringe, dissolving sugar in water, and evaporating salt water.
Assessment Boundary: Assessment does not include the atomic-scale mechanism of evaporation and condensation or defining the unseen particles.

Clarification Statement: Examples of materials to be identified could include baking soda and other powders, metals, minerals, and liquids. Examples of properties could include color, hardness, reflectivity, electrical conductivity, thermal conductivity, response to magnetic forces, and solubility; density is not intended as an identifiable property.
Assessment Boundary: Assessment does not include density or distinguishing mass and weight.

Clarification Statement: “Down” is a local description of the direction that points toward the center of the spherical Earth.
Assessment Boundary: Assessment does not include mathematical representation of gravitational force.
