Interest in US base and Research Center. Our reference 161320

Dear Jeff,

Thank you for hosting us at Osgood Landing in North Andover, Massachusetts and for visiting our offices and manufacturing facility in Wateringen, The Netherlands.

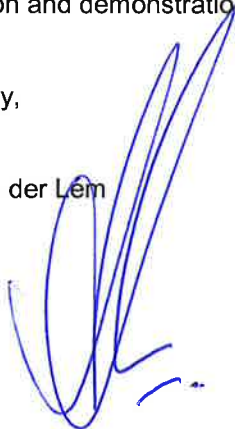

Gakon is a private company and operates internationally as a leading greenhouse builder with a team of approximately 80 employees. We design, engineer, manufacture and build complete greenhouses known for their high levels of innovation. Gakon has more than sixty-five years of experience in the sales and installation of greenhouses, heating equipment, screening, lighting, electrical and water technical systems, climate control and turnkey projects.

As a result of changing laws in the US, a large portion of our business is now directed towards the rapidly growing Cannabis industry. We have a strong interest in establishing a US headquarters to provide services to this new industry. The Cannabis Research Center and Manufacturing Facility that you are seeking to permit in N. Andover provides an ideal location for a collaborative enterprise that would work toward the development of GMP, automated, sustainable, green, energy efficient agricultural practices for Cannabis Cultivation. We have already developed preliminary plans for a state of the art grow and manufacturing facility located at Osgood Landing. This site would serve as an ideal demonstration center and education center for this industry and as a headquarters for our US operations. Several of our corporate partners expressed interest in developing R&D centers under our guidance at 1600 Osgood.

We would welcome this opportunity to work with you and hope that you prevail at the town meeting. Please make it known to the town that Gakon is a participant and supporter of your efforts and that we have an interest in basing our US headquarters at the facility which will include a horticultural R&D, education and demonstration center.

Sincerely,

Aad van der Lem
CEO

Arjan van der Meer
Export Sales Manager
