Dear Congresswoman Pingree:

Thank you for your exemplary leadership on wildlife, climate, and public lands issues. Your commitment to a healthy environment and stable climate are more important than ever as we are at a critical time for our nation's biodiversity. Taken together, habitat destruction, overexploitation of wildlife, climate change, introduction of invasive species, pollution, and other factors threaten the existence of more than one million species worldwide. The 31 undersigned organizations also greatly appreciate the expanded Endangered Species Act (ESA) funding included in the initial FY23 House Interior Appropriations bill, which would boost funding by $77 million over existing levels and begin to reverse the ESA’s long history of operating without adequate funding. We respectfully request that you remain steadfast in your support for these critical programs through the rest of the legislative process.

Wildlife is part of our identity in Maine, from moose to puffins to lobsters. Yet each of these iconic species is at risk, along with many others. The Gulf of Maine is warming faster than almost any other waterbody on Earth.\(^1\) Modeling reports from the National Audubon Society predict that if the current rate of warming continues, more than 106 of Maine's bird species will lose habitat in the state by 2050, and some, like the iconic Common Loon, will be pushed out of their breeding range entirely.\(^2\) But it is not just climate change—irresponsible development patterns, like sprawl, and investment-driven industrial forestry fragment and degrade essential fish and wildlife habitat. Nationally, one-third of terrestrial species in the U.S. are threatened with extinction,\(^3, 4\) and extinctions rates have accelerated in recent years.\(^5\)

By protecting critical habitat and preventing harm to listed species, the ESA has proven to be the strongest and most effective wildlife conservation law in place to curb the loss of vulnerable species and aid in their recovery. The nation has seen the positive effects of the ESA at work, from the incredible recovery of the Bald Eagle and its removal from the list to the ongoing persistence of the Piping Plover, Least Tern, Canada lynx, Atlantic salmon, and others. Despite support the ESA provides, a chronic lack of funding has kept it from achieving its full potential.

On behalf of our tens of thousands of members and supporters across Maine, we request that you defend critical funding for the U.S. Fish and Wildlife Service required to protect, conserve, and
