Since 1970, Environmental Works has been empowering Washington’s most vulnerable people and communities to create the spaces they need to succeed.
Dear Friends and Supporters,

Looking back on 2017 is difficult because we have been so in the moment, and focused on how we can be effective in the context of unsettling and quickly changing times. While it’s important to reflect on what we’ve accomplished, it seems that we all can’t move quickly enough to meet the local and national challenges of rapid growth, climate change, disenfranchisement, inequality, and displacement. Thankfully, we partner with many organizations that are also helping move us towards a better future.

I am thankful that we continue to assist organizations with providing responses to the current housing and homelessness issues as we have done for many years. While we’re excited to be helping in adding to the number of affordable homes available to underserved communities across the state, we’re equally engaged in providing design services for agencies addressing other day-to-day needs such as childcare, food assistance, counseling, health care, and supportive services of many kinds.

Because of the rapid pace of change, we have been learning to adapt and grow. We are so lucky to have a core group of talented staff committed to our mission who have been with us for 5-10 years and longer. We have also been able to attract new talent from diverse backgrounds who allow us to better serve the organizations with which we engage. You may have already met some of our new staff in our office or through social media, and we are excited to report that you will be meeting more soon.

In addition to our architectural assistance work, throughout our history we have pursued research related to our mission, especially related to environmental issues. We are excited to start a research project from a social sciences perspective, focused on identifying what features of supportive housing enable the residents to thrive. More details about the project and sponsorship opportunities can be found on our website, http://www.eworks.org. Stay tuned for next steps and our preliminary report. And if you have the capacity to provide support, please consider a donation to the project.

As always, we hope that you will follow us on social media. And please check out our new website that we think you will find engaging, easy to navigate, and informative.

In Collaboration,

Roger Tucker
Executive Director
Environmental Works

78% REPEAT

43 CLIENTS

A SNAPSHOT OF 2017:
The Washington Growers League is committed to providing safe, affordable temporary housing for agricultural workers in Grant County, Washington. The four buildings on the Mattawa Slope campus offer to farmworkers within 60 miles 144 beds in four-person rooms, shared bathrooms, common areas, porches with views, and barbecue areas, as well as office space and a manager’s apartment. Two upcoming additional building phases will more than triple the current capacity to eventually offer 528 beds in this proven model of housing that ensures that working people have a safe and stable place to call home.

EW was honored to partner on this project with repeat client Washington Growers League, for whom we designed the Brender Creek Seasonal Farmworker Housing in Cashmere, WA.

"This development really stands apart from most farmworker housing: the building design, choice of materials, site layout, and resulting campus atmosphere all give the development a feeling of high quality and attention to design and detail. I know that much of this is due to your creative vision, and to your technical ability to blend the physical needs of the housing provider and residents with your creative vision and sense of aesthetics."

Mike Gempler
Executive Director,
Washington Growers League
Local longtime early learning provider Denise Louie Education Center is transforming a portion of a vast former Navy barracks into a spacious child care facility for up to 97 children, ensuring they enter kindergarten prepared and on track to graduate high school. Denise Louie Education Center will offer six classrooms for infants to children age five, an outdoor play area, a gross motor room for rainy days, a socialization room for Early Head Start, and offices. This child care facility will be co-located with 148 units of affordable family housing being built by Mercy Housing Northwest, and a Neighborcare Health Clinic, with the assistance of Tonkin Architecture and Miller Hiyashi Architects.

After 20 years of disuse, the building was in rough shape. Plywood covered the windows, and rain poured through a decayed roof. The child care center’s design showcases large historic skylights that have been rebuilt, and existing terrazzo flooring that’s been uncovered during construction in this landmarked building.

The Emergence of a Great Community Asset From a Historic Former Naval Air Station Barracks

“A great team has been assembled for the large-scale, complicated renovation of the historic former Naval Air Station barracks at Building 9, and we’re really excited to be a part of it. We are partnering once again with Denise Louie Education Center, who is creating a child care center for up to 97 infants, toddlers, and preschoolers in 6 classrooms. Denise Louie Education Center provides high-quality multicultural early learning and family support services.

The child care will be located in the former naval mess halls (fitting, for a space to be used by creatively messy young children).”

Sally Knodell
Senior Architect, Community Facilities Lead, Environmental Works
Committed to a Housing First response to its opioid epidemic and increasing homelessness, the City of Everett is partnering with Catholic Housing Services to develop this EW-designed 65-unit permanent supportive housing facility for individuals coming out of chronic homelessness. Catholic Community Services will provide on-site case management and residential supports such as treatment for mental health conditions and addiction recovery. This project was awarded a Washington State Housing Trust Fund Ultra-High Energy Efficient Affordable Housing Demonstration funding, and will incorporate renewable energy systems designed to reach net-zero energy.

This will be the first net-zero supportive housing facility in the whole of Washington State. The project team is incorporating a lot of unique design solutions to make the net-zero design happen.

This is one of the first projects developed as part of the City of Everett’s Safe Streets initiative, created to tackle issues such as homelessness, mental health conditions, and substance-abuse disorders within the City. The project will house 70 chronically homeless individuals, many who struggle with mental health issues and addiction. I am proud to be working on a project that will have such a direct impact on providing shelter and services for those in need.”

Christina Congdon
Project Manager, Operations Manager, Environmental Works
The design for the Ethiopian Community Village showcases the powerful influence community involvement can have in the design process. Through interactive hands-on community design workshops, we were able to identify and highlight elements of Ethiopian tradition and culture, and in turn reflect those ideas in the design of the building and spaces. We were delighted to have a high level of participation in community design workshops and review meetings, which provides a sense of ownership in the resulting design.

The intergenerational services housed in the new facility, including social, educational, economic, and health support services, will provide a seamless safety net across generations. Initial conceptual designs for the community center space include multi-user meeting and event spaces for cultural gatherings, life celebrations, and community meetings; a coffee shop serving traditional Ethiopian coffee, tea and snacks; social service offices to provide culturally competent case management, support, and community referrals; youth programming space to support after-school and summer activities; and a state-of-the-art computer learning center.

Preserving Cultural Significance by Incorporating Community Design

“The Ethiopian Community Village project was motivated by our clients’ deep love and respect for family and community. This makes the project extremely inspiring and exciting to collaborate on.

The community recognized the need for affordable housing for its seniors, and ECS’s forward-looking leadership developed this project as a response. The vision for the project is of a space that will be home to a multigenerational community, providing senior housing and an active community center.”

Scott William Ware Stark
Project Manager
Environmental Works
EW has partnered with Options for Supported Housing (formerly Foundation for the Challenged) since 2007 in designing community-based living options for people with developmental disabilities. OSH housing residents frequently also have physical disabilities as well, making adaptive remodeling key to meeting all their needs. In 2017, EW collaborated on OSH’s first projects in eastern Washington: “healthy homes” being renovated with Washington State Housing Trust Fund support to provide affordable, accessible housing to extremely low-income people with co-diagnoses of developmental disabilities and mental health issues.

“Adults with developmental disabilities can face a hard time locating affordable, accessible housing that’s integrated within their community. Longtime nonprofit EW partner Options for Supported Housing tackles this challenge through purchasing houses, adapting them to meet the needs of people with developmental disabilities (many of whom also have physical disabilities), and offering them at affordable rents.

We are honored to have completed over 35 projects in the past 11 years with Options for Supported Housing. This longtime collaboration has strengthened our capacity to deploy informed design solutions and durable and attractive materials that improve residents’ quality of life.”

Dan Baldner
Senior Architect, Special Projects Lead, Environmental Works
The Kirkland Shelter will provide emergency shelter for families and women for 4 to 6 months on the site of the existing Salt House Church. The facility will also offer on-site case support services, full kitchen and dining room amenities, laundry services, a day center, and administrative offices. The shelter will be able to accommodate up to 10 families and beds for up to 48 women. Partners include Catholic Community Services, Catholic Housing Services, the New Bethlehem Project (which helps families with children), The Sophia Way (which supports single, adult women), the Salt House Church, and the City of Kirkland.

"We are very excited to be partners on the Kirkland Shelter for Families and Women project which will provide emergency shelter and services that are either not provided, or only offered in a limited manner by various facilities on the Eastside, including on-site case management, housing navigation, and access to several service providers. The project is a great example of collaboration of community organizations to address the growing homeless population in East King County."

THANK YOU FOR SUPPORTING INCLUSIVE DESIGN FOR WASHINGTON NONPROFITS!

Since 1970,

Environmental Works has empowered underserved communities to develop the facilities they need to succeed. This critical work is accomplished through the support of local governments, companies, foundations, and individual donors like you.

Your donations support work that nonprofits would not be able to fund themselves, including feasibility and pre-development support that enable them to raise construction dollars; and, an innovative post-occupancy research project to assess which design features are most effective in permanent supportive housing.

Support socially and environmentally responsible design for nonprofits!
