Vineyard Wind is gathering information to be used in a radar analysis looking at the potential effects of offshore wind turbines on radar systems used by fishing vessels. When the radar analysis is complete results will be shared with BOEM, USCG and the report will be available on our website.

In order to get an accurate representation of radar units typically used in different fishing fleets we are asking fishermen to provide information about the units they have on board. Please answer the questions below. If you don’t have all the information, just the make and model of the radar unit will be helpful. You can fill out our online form at vineyardwind.com/radarquestionnaire or text/email a picture to me if that’s easier.

Thank you,
Crista Bank
