- Omnidirectional Pickup Pattern**
- Reduces Background Noise**
- Points Microphone At Person Speaking**

Microphone for Recording Meetings

The Voice Tracker is an advanced technology microphone for recording in larger rooms or meeting rooms with background noise problems. Coverage up to 20 feet away in noisy rooms and further in quiet rooms.

Single Channel Voice Tracker Kit

The Single Voice Tracker microphone kit includes a 25 foot cable for connecting to the computer microphone input. An optional USB audio adapter can connect the microphone using a USB port.

Dual Channel Voice Tracker Kit

A Dual Voice Tracker kit is available for recording in larger rooms. This is useful, for example, where board members are sitting in front of an audience that participates in the meeting. The kit includes two Voice Tracker units, two 50 foot microphone cables, and a stereo USB recording interface.

Product Part Numbers

Single Voice Tracker Kit: VT2H
Optional USB Adapter: IMIC
Dual Voice Tracker Kit: VT2D

Capture speaking in larger meeting rooms

The Voice Tracker microphone uses "beam forming array" microphone technology to point the microphone at each person as they speak. It is able to switch pickup direction instantly as different people participate in the conversation. The result is a more intelligible recording with reduced background noise and room resonance. Built-in noise reduction processing also enhances intelligibility, removing even severe background noise, such as video projectors, air conditioning, or street noise.

Directional Pickup of Each Person Speaking, with Automatic Noise Reduction Features
