FIRM OVERVIEW

CRYPTOCURRENCY CAPITAL LLC (CCC) is a US-based holding and research company focused on the cryptocurrency and blockchain space. Along with conducting extensive and dynamic data-driven research and analysis, CCC also manages a CFTC compliant crypto fund, the Cryptocurrency Fund L.P. (CCF). CCF offers institutional-grade investors and SFOs access to the emerging asset class of cryptocurrencies and blockchain-based technologies.

Our daily coin reports represent the processed and analyzed data collected from multiple sources and are applicable to use on a real-time basis. Providing our CCC platform subscribers and CCF investors with a single resource for up-to-date market information. Furthermore, CCF has partnered with TSI Analytics; a quantitatively focused trading platform for developing machine learning capabilities. TSI's "Tradis" platform enhances our research and analytical efforts, even further decreasing the probability for participation in "scam" tokens and "pump and dump" schemes. It increases the potential for selecting high-quality cryptocurrencies and delivers clarity for investors and market participants.

Using the same proprietary token selection process as our CCF analysts and traders, our research team seeks to identify best-in-class tokens and cutting-edge blockchain technologies. With a primary focus on utility tokens (commodities), CCC is currently tracking approximately 50 utility tokens that have been selected from a growing pool of 1,400+ cryptocurrencies.

SERVICES WE PROVIDE: Cryptocurrency Market Analysis and Investment Management.

ANALYTICAL PLATFORM

Our technical and fundamentally based research and analysis are collected, aggregated and distributed through our daily, weekly, and monthly research reports and data feeds available to the CCF investors and CCC research platform subscribers.

TECHNICAL ANALYSIS

Technical Analysis is the forecasting of the future cryptocurrency price movements based on an examination of past trends. Our reports include major indicators sophisticated to understand, but easy to use as our goal to make it simple and useful at the same time. Our preferences: Elliot Waves, Momentum, Candle Analysis, Fibonacci retracement and Fibonacci channels and, of course, support/resistance price levels.

FUNDAMENTAL ANALYSIS

Fundamental analysis is a method of evaluating industry and project data in an attempt to measure its intrinsic value, by examining related economic, financial and other qualitative and quantitative factors. We have developed comprehensive due diligence procedures that include 50 factors for investment decisions, including product strengths, usability, scalability; token supply; security; team; jurisdiction; funding.

COIN REPORTS

The crypto space is booming with hundreds of new blockchain projects. Everyone is looking for the next Ethereum or Bitcoin. It's obvious that only new coin can make x3 or 30x price jump. These reports are created to show you the next industry leader.
