The U.S. Climate Alliance is a bipartisan coalition of 24 governors working together to achieve the goals of the Paris Agreement and keep temperature increases below 1.5 degrees Celsius.

Collectively, we represent:

- 59 percent of the U.S. economy
- 54 percent of the U.S. population
- 42 percent of U.S. greenhouse gas (GHG) emissions

U.S. Climate Alliance members are cutting emissions, accelerating climate action and policies, building resilience to the impacts of climate change, and promoting clean energy deployment at the state and federal level.

Here we highlight some of the bipartisan climate solutions our states are deploying at scale – centered around equity, environmental justice, and a just economic transition – to safeguard public health, grow the U.S. economy, and secure a net-zero future. These counts include both statutory and executive policies and actions that states have adopted or are in the process of adopting as of April 2022.

The table above tallies the number of U.S. Climate Alliance members taking climate action by sector. The next page provides more detailed reporting.
OUR COLLECTIVE GOALS

Together, Alliance members are committed to: reducing collective net GHG emissions at least 26-28 percent by 2025 and 50-52 percent by 2030, both below 2005 levels, and collectively achieving overall net-zero GHG emissions as soon as practicable, and no later than 2050. Alliance members are advancing these goals through policies, regulations and legislation across sectors and issue areas.
