SAFETY DIRECTIONS: Very dangerous. Poisonous if swallowed. When opening the container and using baits wear elbow-length PVC gloves. If product on skin, immediately wash area with soap and water. After use and before eating, drinking or smoking, wash hands, arms and face thoroughly with soap and water. After each days use wash gloves and contaminated clothing.

FIRST AID: Speed in treatment is essential. If poisoning occurs, contact a doctor or Poisons Information Centre (phone Australia: 13 11 26). If skin contact occurs, remove contaminated clothing and wash skin thoroughly. Remove from the contaminated area. Apply artificial respiration if not breathing. If in eyes, hold eyes open, flood with water for at least 15 minutes and see a doctor.

MSDS: Refer to Material Safety Data Sheet for further information.

CONDITIONS OF SALE and DISCLAIMER:
Animal Control Technologies (Australia) Pty Ltd (ACTA) will not accept responsibility for losses or damage arising from the supply or use of these goods other than the responsibility for the merchantable quality of the goods. To the extent allowed by the relevant laws in each State, the liability of ACTA is limited to the replacement of goods in the event that a valid claim of deficiencies in merchantable quality is proven.
DIRECTIONS FOR USE: ACT, NSW, NT, QLD, SA, VIC, TAS & WA only

Refer to www.animalcontrol.com.au for an electronic version of your State or Territory documents.

Remove baits from tray and break into separate blocks. For ground baiting, unless placement is otherwise specified by State/Territory requirements, individual baits should be buried in holes of approximately 8-10 cm depth at intervals of 200-500 metres at marked sites. Check regularly and replace baits at sites where there is evidence of fox take.

Untaken baits should be removed after 7 days (or as per relevant State/Territory baiting program requirements)

The application of baits by air is subject to State/Territory approval. Use only for the control of foxes.

NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED BY APPROPRIATE LEGISLATION.

THIS PRODUCT IS NOT TO BE USED IN DOMESTIC OR HOME GARDEN SITUATIONS.

NEIGHBOURHOOD NOTIFICATION: Neighbours must be notified to allow them to take appropriate action. The notification must advise that steps (e.g. restraint, muzzling) need to be taken to ensure that domestic dogs do not gain access to 1080 baits or poisoned animals. The notification must specify the dates between which baiting will occur. This notification should be in writing and should be given to all adjoining landholders at least 72 hours in advance except where alternative communication arrangements have been made that meet State/Territory requirements and overall safety criteria. A record of the notifications must be kept. Baiting must commence within 10 days of notification or else another three days notice of intent to lay baits is required advising the revised particulars.

SIGNAGE: Signage is compulsory for all lands where baiting occurs. Do not lay baits until signage is in place. Signage must include – date baits laid, contact numbers, toxin name, target animal and a warning that domestic animals and pets can be affected. Users must ensure that signs are put up immediately before 1080 poisoning operations commence on the property and are placed according to requirements specified by the relevant State/Territory authority. These notices must remain up for at least 4 weeks after the application of baits by air is subject to State/Territory requirements and overall safety criteria. A record of the notifications must be kept. Baiting must commence within 10 days of notification or else another three days notice of intent to lay baits is required advising the revised particulars.

DISTANCE RESTRICTIONS: Baits must be placed at least 150m from a dwelling; 20m from permanent or flowing water bodies; 5m from boundary fences; and 5m from the edge of formed public roadways; or as specified by State/Territory.

STORAGE, TRANSPORTATION AND DISPOSAL: Only authorised personnel can have access to baits. Baits must be transported and stored in such a way that unauthorised personnel cannot have access to baits. Do not store the bait in a position accessible to children, livestock or domestic pets. Unless approved by the relevant State/Territory authority, users must not store this product after a baiting campaign is complete. The pesticide is only to be kept or stored in the container, and bearing the label, as supplied by the manufacturer. Do not allow baits to contaminate foodstuffs, or feed, for human or non-target animal consumption.

Triple rinse or pressure rinse containers before disposal. Break, crush or puncture and dispose of empty rinsed containers in a local authority landfill and/or as specified by relevant State/Territory requirements. If no landfill is available, bury the containers below 0.5 m in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. Containers which have held product are not to be used for any other purpose and must be disposed of.

PRECAUTIONS:
DO NOT apply baits to, or in, crops which are in mid to late developmental stages. DO NOT apply baits to, or in, crops if contamination of produce is likely to occur.

PROTECTION OF DOMESTIC AND FARM DOGS: Steps (e.g. restraint, muzzling) need to be taken to ensure that domestic and farm dogs do not gain access to 1080 baits or poisoned animals. In the event of accidental poisoning seek immediate veterinary assistance.

PROTECTION OF WILDLIFE, FISH, CRUSTACEA AND ENVIRONMENT:
DO NOT contaminate dams, rivers, streams, waterways or drains with the product or used containers. DO NOT feed baits to non-target animals including birds.

Information on non-target animal distribution, conservation status, habitat preference, diet, tolerance to 1080, body weight and size of home range can be used to reduce poisoning risks posed by baiting programs. Time baiting programs when non-target species are least active or least susceptible. This product may be toxic to some birds and other native wildlife. Baits should not be laid at times when, or in locations where, birds or other non-target wildlife are likely to be harmed by them. Bait placement and/or bait station design should be such that non-target access is minimised.

This product may be toxic to some marsupial carnivores. Where appropriate, potential risks should be reduced by correct bait placement, selection of the minimum effective rate, and avoidance of baiting during the main breeding season.

To the extent possible, untaken baits should be recovered at the end of a baiting campaign. Untaken fox baits should be removed after 7 days (or as per relevant State/Territory baiting program requirements). To the extent possible, animal carcasses should be recovered during and for 14 days after a baiting campaign. Untaken baits and animal carcasses should be destroyed by burning or burial according to the requirements of the State/Territory in which use has occurred.

Any incidents where it is suspected that non-target animals may have been poisoned by 1080 should be notified to State/Territory authorities.

DO NOT contaminate dams, rivers, streams, waterways or drains with the product or used containers.
