Dana DeBeauvoir, Travis County Clerk

STAR-Vote
How It All Began …

- The Economic Argument
- The Business Model
- Implementation
1. Check in to receive a token

Connected to the Internet

Thermal receipt printer uses less energy than laser or inkjet, allowing the system to continue to operate on batteries in a power outage.
2. Controller scans token and exchanges it for a unique authentication slip
3. Voter selects candidates on a computer, which prints out a paper ballot showing whom they voted for.
4. To finish voting, the voter confirms the choices then takes it to a ballot box, which scans and records the vote. This creates a paper trail that allows for old-fashioned recounts.
For the Future …

- The Economic Argument
- The Business Model
- Implementation
It’s Not Finished, It Still Needs YOU!!
Now our work begins.
