

THE APOCALYPSE

AHHH ZOMBIES ARE ATTACKING! The zombie apocalypse has finally come, and we must survive it! In order to defeat the zombies, we (the humans) have to find the antidote that Dr. Spelling created years ago- the only problem is that the computer that hosts the antidote has been smashed into pieces and scattered by the zombies. If we can find all of the pieces and put the computer back together, we can find the antidote and cure the zombies!

Here's how The Apocalypse will work:

- The Cave is the humans' home base. It is safe from zombies, as it has two massive guards with weaponry.
- Find all of the pieces from the smashed computer that have been scattered around and bring them back to The Cave. In the cave, you can help Dr. Spelling reassemble the computer.
- If you are tagged by a zombie when you leave The Cave, then you slowly turn into a zombie. Do this by walking toward the re-spawn point within the Zombie Stronghold.
- If a medic saves you, by tagging you, before you reach the re-spawn point, then you do not turn into a zombie. If you reach the re-spawn point, however, then you do turn into a zombie and your new mission is to defeat the humans.
- To become a medic, visit the Med Center. There you will learn how to be a medic. Medics will be distinguished by wearing a red sash. Medics cannot save themselves.

How to kill the zombies:

- You can earn weaponry by going out and collecting pieces of gold. Bring the gold to the bank to exchange the gold for money. Then you can use the money to purchase weaponry at The Armory (\$5 for a sponge, \$10 for a bucket, \$40 for a sword).
- You can only carry 2 pieces of gold at a time.
- If you hit a zombie with your weapon (a sword or sponge), then the zombie must return to the re-spawn point in the Zombie Stronghold. The zombies never die completely (obviously, they're zombies).
- You can attempt to go into the Zombie Stronghold to kill zombies. You can only enter through the gate.

How the game ends:

- Every human turns into a zombie OR the computer is put back together and the antidote is discovered.
