Better choices if you need to use poison

If you do decide to use rodenticides as a last resort make sure you choose a product that is less harmful to birds, wildlife and pets.

Ensure you purchase products with the active poison ingredients sodium chloride, warfarin, coumatetralyl, or diphacinone. Purchase baits that come in block form and ensure they are used in tamper-proof bait stations. Avoid bait pellets or pastes as these can easily be eaten by other animals. Always immediately dispose of any rodent carcasses to prevent harm of pets or wildlife and remember poisoned rodents can remain alive and active for days, so using rodenticides indoors won’t prevent them escaping and posing a risk to other animals.

The following products don’t contain SGARs and are commonly available in supermarkets and hardware shops:
• Ratsak Naturals (a human and pet safe bait option)
• Bayer Racumin Rat and Mouse Paste
• Yates RATSAK Double Strength Bait Station

Birds of prey help keep pest rodent numbers down naturally.

Do not use SGAR products

Packaging for SGARs can be unclear, but as a safe bet avoid products with the ingredients brodifacoum, bromadiolone, difethialone, difenacoum or flocoumafen. These include products like Talon, Fast Action RatSak and The Big Cheese Fast Action brands.

For a more comprehensive list of product names and information about how you can help get these poisons off the shelves, scan this QR code:

Bird-friendly rodent control for gardeners

Making better choices in our homes

**Visits from unwelcome pests**

When rats or mice show up uninvited, we often reach straight for the rodent bait. But while we do our best to ensure baits are placed out of the reach of children, pets, and other animals, we rarely think about where rodents go after they’ve eaten them.

Using rodent baits around our houses and gardens can have a serious impact on the native wildlife and pets around us.

**Make your garden bird-friendly (not rat-friendly!)**

Making your house and garden less enticing for rodents to feed, shelter, and nest in is a great way to keep your local native wildlife safe.

**Try:**
- Storing excess pet food away from rodents
- Rodent-proofing chicken pens and aviaries
- Sealing potential access points, such as roof and wall cavities
- Removing fallen fruit from trees, and
- Keeping your yard, sheds and garden waste clean and tidy.

**Encouraging native predators to your garden**

Having healthy populations of birds of prey helps keep rodent numbers down naturally, another reason to avoid rodenticides.

**Encourage birds in your backyard, by:**
- Planting owl-friendly native plants and trees with a good canopy cover (and removing rat-friendly plants like palm trees)
- Installing appropriately designed nest boxes for owls to breed in
- Using snap traps instead of rodent baits. Snap traps are the most humane method of lethal rodent control, but make sure you set them up where pets and children can’t access them

**What about my compost heap?**

**Rodent proof your compost bin:**
- Install vermin mesh or chicken wire on the base
- Keep your compost heap moist and turn it over often, so that it breaks down faster – big chunks on the top are attractive to rats!

**Alternatives to harmful rat and mouse poisons**

Snap traps are one of the most humane methods of rodent control, but make sure you set them up where pets and children can’t access them. The most effective spots to place snap traps are amongst high-activity areas like dark corners, along walls, behind appliances and objects, and all areas where droppings are evident.

There are also a range of other non-poison traps on shelves to investigate.
