SuperGreen matches 100% of your electricity usage.

A percentage of SuperGreen’s renewable energy content meets the minimum required of all energy providers under California’s Renewable Portfolio Standard (RPS) rules. SuperGreen exceeds these requirements by including 100% State RPS-eligible renewable energy. 100% of SuperGreen’s renewable electricity content is Green-E certified.

In 2019, SuperGreen will be made up of the following new renewable resources averaged annually.

<table>
<thead>
<tr>
<th>Resource Type</th>

**Total Green-e Energy Certified Renewables: 100%**

1. These figures reflect the renewables that we have contracted to provide. Actual figures may vary according to resource availability. We will annually report to you before August 1 of next year in the form of a Historic Product Content Label the actual resource mix of the electricity you purchased.
2. New Renewables come from generation facilities that first began commercial operation within the past 15 years.

For comparison, the current average mix of resources supplying California includes: Eligible renewables (29%), Coal (4%), Nuclear (9%), Natural Gas (34%), Large Hydroelectric (15%), and Unspecified sources of power (9%). This resource mix is an annual estimate prepared by the California Energy Commission based on the electricity sold to California consumers during 2017.

The average residential electricity customer in the City and County of San Francisco uses 280 kWh per month.

For more information about SuperGreen, please contact CleanPowerSF, (415) 554-0773, cleanpowersf@sfwater.org.

SuperGreen is 100% renewable, greenhouse-gas free electricity generation that’s Green-E certified, which means it meets the strong environmental and consumer protection standards established by the nonprofit Center for Resource Solutions. As part of this certification, we’re required to mail you this 2019 Green-E Prospective Product Content Label, which discloses where your energy is expected to be generated this year.
