64cm	58 / 62 cm	62.0 cm	220 mm	74.0 / 72.0	415 mm	67 mm

Body Measurements Needed for correct sizing:

Measurements should be taken in stocking feet and with unobstructive clothing. We recommend you take each measurement 2-3 times and average your results for accuracy.

AGE: _____
GENDER: _____
Weight: _____

Height (A) _____
Stand in stocking feet on a hard floor, with your back flat against a wall or door. Your feet should be about 6" (15cm) apart. Measure from the floor to the top of your head.

TRUE INSEAM (C) _____
Remain in the same position as for the height measurement. Position a hardback book, about an inch wide, between your legs with the binding facing up and the edge flat against the wall behind you. The pressure should approximate saddle pressure when seated on a bike. Have your assistant measure from the floor to the top of the book. **IMPORTANT: This is not the same as your pants inseam! Pants inseam numbers can be 1-3" less than your true inseam.**

TORSO LENGTH (B) _____
Holding your position from the inseam measurement, with the book in place, measure from the top of the book to you sternal notch. Your sternal notch is the bony depression at the base of the neck.

UPPER LEG LENGTH (D) _____
Kneel, facing the wall. Place the book between your legs again with the binding facing up and the edge flat against the wall in front of you, similar to when you measured your true inseam. Have your assistant measure from the floor to the top of the book.
