

# TYPE Q MOUNTS — TOP and SIDE

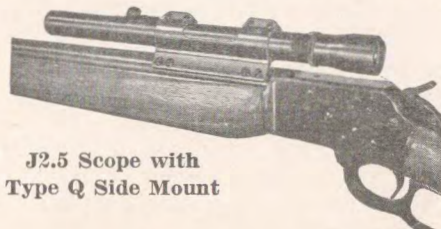

**J4 Scope with  
Type Q Top Mount**

Q Top and Q Side ( $\frac{3}{4}$ " dia.) Mounts are like the Type U (1" dia.) Mounts which have proved so dependable with the Model K Scopes. The Q Mounts are machined from solid metal and because of one-piece construction, there are no parts to loosen or wear. Mount rigidity is extremely important, since even the slightest movement between parts of mount, scope and mount, or mount and gun may throw the scope far out of alignment. To make sure your rifle shoots where you aim, use a Weaver Mount.

When attached with the strong light weight Q Mount, the scope becomes virtually a part of the gun, yet because of one-piece construction, it is easy to remove the scope and mount as a unit.

Either Q Top or Q Side Mounts are suitable for all Model J and G Scopes. Top mounts can be widely spaced and are often preferred with Models J4 and G6 Scopes which are slightly longer than the Models J2.5 and G4. Select the recommended Q Top or Q Side Mount by their numbers as given in the list.

**J2.5 Scope with  
Type Q Side Mount**
