There are over 120,000 BMA degrees awarded each year in the U.S. Only a small proportion of these newly minted MBAs will do more than read about a sustainable development issue during their graduate studies. This lack of exposure to innovation can be attributed to a dearth of schools attempting to proactively integrate sustainability focused experts and real-world projects into business curricula. The tide has changed, and more recently, the surge of interest in measurement, planning, energy conservation, carbon trading, green buildings and sustainability has brought many companies to the doors of business schools looking for the next generation of managers with the ability to quantify and develop a business case and management plan for sustainable opportunities. In this class we will hear from business leaders, integrate sessions with faculty across disciplines, analyze and evaluate different case studies. In teams, understand and develop a LCA sustainability plan, and complete an Energy Management System design competition in order to better understand the attributes of sustainable business practices, how to measure performance, manage change, and explore the business case for sustainability focused initiatives.

Course Mission: To build upon the fall semester Strategic Sustainability & Models course by reviewing sustainable business tools and processes. Through a combination of LCA, case analysis, group projects, guest speakers, videos, web based information, live cases, and analysis of current readings you will develop:

1. The ability to identify sustainable business opportunities, analyze and make recommendations as to how to implement new product initiatives.
2. Familiarity with the drivers and measures companies may use to implement sustainable initiatives, develop a sustainability plan, and the costs/benefits of these activities.
3. An understanding of the financial models and business case for new initiatives including energy management systems, building retrofits, clean energy, and estimates of uncertainties associated with these initiatives.

Alignment with Graduate Program Goals: This course is designed to foster greater in-depth discussion and equip you with the critical thinking and tools to develop a better understanding of sustainability in practice. Weekly objectives include the development of value propositions and tools that contribute to a management toolkit enabling better decision making within and outside of this course. A number of business leaders have accepted invitations to come to this class and share their experiences, or host us on-site. The speakers have also been invited to be part of student case discussions. You will utilize a Social Cost of Carbon (SCC) to analyze new initiatives. Through the insight provided by guest speakers, the application of your own skills and previous coursework, you will further develop the capacity to lead any organization towards an Integrated Bottom Line of economic, ecological, and social sustainability.
**Linkages Across Curriculum:** Previous courses in Strategic Sustainability & Models, Financial and Managerial Accounting, Applied Ethics, Statistics, Financial Management, Value Chains and Operations, Sustainable Consulting Project I, Systems Thinking, and Environmental Science provide a solid foundation from which to understand the general sustainable contexts in which businesses operate. This course builds on these functional areas and concepts to consider the sustainable challenges that businesses today face while hearing from successful area business leaders that are part of the next industrial revolution shaping a new direction for sustainable businesses. A common theme during the spring semester will be “Energy & Innovation” and we will focus on modeling the business case that includes environmental and social performance.

**Course Materials**
- Decision Tools 7.5 [http://www.palisade.com/academic/students.asp](http://www.palisade.com/academic/students.asp) ($50)
- LCA Software [www.Sustainableminds.com](http://www.sustainableminds.com)
- Other materials are available via the class Blackboard site and Harvard Course Pack

**Case Studies**
- SMBA case studies available within Blackboard

**Pedagogy:** The specific material we cover in any class will be largely determined by your input and questions when developing the business case for sustainability. One component of your class participation grade will be the quality of your input to the discussion process with case analysis and guest speakers. Keep in mind your participation is dependent solely upon your ability to engage in discussion. If you do not say anything during the semester, you can expect your performance evaluation to reflect your lack of substantive contribution. The goal is to develop your ability to consider managerial decisions and situations related to sustainable development, to find, analyze and solve problems, to communicate ideas, and to appreciate a general management point of view.

A second component of individual learning and assessment is directly linked to further developing your own ability to evaluate a business situation, determine the primary and secondary drivers of a given situation and to then research and develop feasible alternatives. These alternatives need to be tested and further developed before recommending a course of action, implementation plan and suggestions for monitoring and controlling outcomes. To this end, individual case studies are due in Blackboard before noon on the given date in this syllabus.

Group learning and assessment is facilitated through the use of projects with both presentation and written deliverables. The class will be divided into teams for the purpose of the course project deliverables. Each team will be required to electronically submit their LCA project report and presentations to the groups section of Blackboard. The first group project will be the development of new product development plan utilizing Sustainable Minds LCA software. Deliverables are due by noon on February 28th. Sustainability Plan assignment details and evaluation forms are available within Blackboard.
The second component of group learning and assessment will be deliverables of an Energy Management System (EMS) design competition. With the help of the USGBC regional Green Building Alliance, a commercial construction firm, invited speakers, and field trips, you will have the opportunity to develop an understanding of what it takes to design and value office and educational space paying particular attention to energy, ecological impacts, costs, and value created. The parameters of the competition are available in Blackboard with the task for teams to design an EMS for the Business School’s Rockwell Hall, using data analytics, and value of the system for a building. All teams will have details on square footage, orientation, number of employees in the space, availability of technology and HVAC systems, infrastructure, and a budget. The goal is to maximize the ROI and address the feasibility of a high performance work environment that include social and environmental performance. Project evaluation will be based on the review of an expert panel. In addition, audience members will also evaluate project presentations on preparation, thoroughness of the proposed business case for the renovations, innovation, and communication skills. Evaluation forms will be available within the Assignments folder in Blackboard. Reports will be due within Blackboard by 5PM on May 4th; presentations due by 9AM on May 9th.

**Performance Assessment:** Your final performance evaluation will be a composite of the instructor’s assessment of your contributions to discussions with invited speakers, case discussion, case report and project deliverables.

The overall performance evaluation will be assigned based on the following weightings:

*Individual*

<table>
<thead>
<tr>
<th>participation</th>
<th>20% randomly, in class</th>
</tr>
</thead>
<tbody>
<tr>
<td>5 Case write ups</td>
<td>30% assigned</td>
</tr>
</tbody>
</table>

*Groups*

| LCA Project Presentation/Report | 20% evaluated by instructor |
| EMS Design Presentation/Report | 30% evaluated by panel, audience, instructor |

**Deliverables:** All written documents should be size 12 font, New Times Roman, single spaced, 1” margins, using **MLA citation guidelines** (as a single Word document with embedded tables and appendices). All evaluation forms are available within the Blackboard Assignments folder.

**Participation (Individual =20%)**

Substantive contributions to class discussion includes any comments, or analysis which advances the general class understanding of key management issues for the topic or issue, the major problems, key alternatives to consider, and appropriate decisions or plans of action that could be undertaken. I reward contributions that advance our discussion, help us change direction when needed, bring in outside sources, provoke useful debate, and build off of the comments of others. Both quantity and more importantly, *quality* is important. An assessment will be made six times using the following scale: 5 (excellent), 4 (very good), 3 (good), 2 (satisfactory), 1 (poor), 0 (absent). The best five times will constitute your participation. This system is set up to encourage risk-taking needed for excellent contributions and discourage counterproductive behaviors, such as talking just to talk. At the end of the course I sum the points and rank the class by these totals.
I use these scores to evaluate individual participation, where to make breaks between the extremes, and trends. Further details regarding participation evaluation can be found within the class Blackboard site.

Case Analysis Deliverables (Individual = 30%)

- Individual case analysis reporting requires the submission of a written report (as a single Word file, maximum length 2 pages, excluding title page and appendices).
- All written deliverables for this assignment must be submitted with a title page containing the following statement and the authors’ signature. “In accordance with the Business School's Code of Ethical Behavior, I attest that I have not engaged in any acts of plagiarism in completing this assignment.”
- Answer all case questions and follow the case report guidelines with the following structure: Problem Statement, Situation Analysis, Alternatives with Advantages and Disadvantages, Recommendations for Implementation of Chosen Alternative, Suggestions to Monitor and Control.
- *Four cases will be in-class, one case (TBD) will be a live case reviewed on-site.

LCA Project - Presentation/Report (Group = 20%)

- Each team will present their plans for assessing and managing a new product development plan utilizing LCA data.
- All written deliverables for this assignment must be submitted with a title page containing the following statement and all authors’ signatures. “In accordance with the Business School's Code of Ethical Behavior, I attest that I have not engaged in any acts of plagiarism in completing this assignment.”
- Outline and instructions for deliverable can be found within Blackboard.

EMS Design & Sustainability Plan Competition Presentation/Report (Group = 30%)

- Each team will be required to present their ideas for an innovative and high performance building system in addition to a written report (maximum length 5 pages, excluding title page and appendices).
- Cover sheets are required, with group member names. All written deliverables for project reports must be submitted with a title page containing the following statement and all authors’ signatures. “In accordance with the Business School's Code of Ethical Behavior, I attest that I have not engaged in any acts of plagiarism in completing this assignment.”
- Reports and presentations should follow the guidelines posted within Blackboard.
- Evaluation based on audience feedback, judging panel, and instructor’s evaluation.

After the submission of project deliverables an electronic group member evaluation will be sent. Each member of a group will be asked to evaluate their own contributions to group work and the performance of the other members of the same group. This evaluation will be taken into consideration for overall performance evaluation for the course.

If you have any questions or concerns, stop by my office or contact me via email.
## Course Goals, Learning Objectives and Assessment

<table>
<thead>
<tr>
<th>Course Goals</th>
<th>Learning Objectives</th>
<th>Assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Develop better <strong>communication skills</strong> through the evaluation of managerial decisions and situations related to sustainable development and ethics.</td>
<td>Students will communicate their reasoning when resolving sustainability dilemmas; listen to other individuals’ opinions, reasoning processes and decision alternatives when resolving dilemmas and enable this listening to affect the student’s reasoning processes and decision alternatives.</td>
<td>Class Discussion Case Analysis Product LCA Plan</td>
</tr>
<tr>
<td>Ability to apply graduate course learning while contributing to <strong>business case analysis</strong> and discussion.</td>
<td>Students will be able to identify and analyze sustainable development dilemmas while applying previous coursework knowledge and tools working with a Social Cost of Carbon (SCC).</td>
<td>Class Discussion Case Analysis Product LCA Plan</td>
</tr>
<tr>
<td>Ability to <strong>recognize the drivers and measures</strong> companies use to implement sustainable initiatives.</td>
<td>Through hearing from experts and from utilizing current readings and case studies students will identify sustainability issues, opportunities and the stakeholders involved.</td>
<td>Class Discussion Case Analysis Product LCA Plan EMS Design Project</td>
</tr>
<tr>
<td>Orientation to a <strong>cost/benefit decision-making framework</strong> applicable to contemporary management issues.</td>
<td>Using a structured approach, students will apply the frameworks, e.g., GRI, GHG Protocol, and LEED along with simulation tools to find the business case for sustainability and SCC.</td>
<td>Class discussion Case Analysis Product LCA Plan EMS Design Project</td>
</tr>
<tr>
<td><strong>Awareness, understanding, and evaluation of sustainable business opportunities</strong> and implementation obstacles.</td>
<td>Students will identify organizational influences on individual decision making processes and action while applying these influences to business situations.</td>
<td>Class discussion Case Analysis Product LCA Plan EMS Design Project</td>
</tr>
<tr>
<td><strong>Apply decision-making and evaluation skills</strong> necessary to balance competing resource needs with long term and short term IBL performance.</td>
<td>Students will be able to develop, analyze, and evaluate options or alternatives for resolution of environmental, financial, and social challenges while utilizing relevant simulation and spreadsheet software.</td>
<td>Class Discussion Case Analysis Product LCA Plan EMS Design Project</td>
</tr>
<tr>
<td>To foster effective small group problem solving and <strong>cross-functional teamwork</strong>.</td>
<td>Students will be able to identify, analyze, discuss and debate business opportunities surrounding emerging business innovations.</td>

<th>Week/Date/Topics</th>
<th>Speakers/Case Studies/Readings</th>
</tr>
</thead>
</table>
| 1. Tuesday, January 17| **Sustainable Minds** LCA Software and Resources  
                        Model Sustainability Policy, and SOBA Code of Ethical Behavior, accessible within Blackboard  
                        **HBS: Learning by the Case Method** |
| 2. Tuesday, January 24| Analytical Hierarchy Process  
                        LCA Planning  
                        **Social Cost of Carbon** |
| 3. Tuesday, January 31| **Sustainability – Making the Business Case**  
                        CH 1: Preparing for Change  
                        CH 2: Refining the Business Case  
                        @Risk Monte Carlo simulation software installed before class  
                        **Case Study:** USAF (this case posted within Blackboard)  
                        Preliminary LCA Product modifications Review |
| 4. Tuesday, February 7| CH 3: Creating the Vision  
                        CH 4: Identifying Impacts & Priorities  
                        **Case Study:** Ergonomics - Analytical Hierarchy Process  
                        (this case is posted within Blackboard) |
| 5. Thursday, February 16| Site Visit: PITTOHIO Cross Dock facility site visit  
                        Live case study  
                        CH5: Developing Sustainability Reports  
                        CH6: Developing an Implementation Strategy |
| 6. Tuesday, February 21| CH7: Developing Effective Management Systems  
                        CH8: Determining the Structures Needed to Manage the Effort  
                        **HBS Case study:** Amanco - Developing the Sustainability Scorecard  
                        “Transforming the Balanced Scorecard from Performance Measurement to Strategic Management”  
                        LCA Wrap Up |
| 7. Tuesday, February 28| **LCA Project**  
                        **Group Assignment**  
                        **LCA Presentations and Reports**  
                        *all teams submit reports and slides by noon on February 28*  
                        March 7th  
                        Spring Break |
