Appriss Health PDMP Integration

Appriss Health’s PMP Gateway solution integrates prescription drug monitoring program data into the EHR for analytics, insights, and resources clinicians can use to make the most informed decisions when treating patients with substance use disorders.

**OCHIN Epic Integration**

PMP Gateway simplifies integration of controlled substance prescription information into the EHR workflow and is a proven time saver for clinicians. With this information at the point of care, providers no longer need to log into separate websites to retrieve a patient’s controlled substance dispensations.

OCHIN also offers the most advanced Gateway module, NarxCare. The industry-leading substance use disorder solution, NarxCare provides information, insights, tools, and resources well beyond a standard PDMP report, including:

- Use scores
- Predictive risk scores
- Red flags
- Visualizations of PDMP data
- Access to resources and care team communications

PMP Gateway and NarxCare help prevent and treat substance abuse through collaboration and coordination of care. These solutions equip clinicians and care teams with the tools to increase access to treatment, and improve patient education and engagement.

**OCHIN Technology Partner**

Appriss is an OCHIN Technology Partner, providing PDMP integration solutions to members using OCHIN’s hosted Epic EHR.

This relationship allows OCHIN leverage to oversee and manage the vendor relationship and conduct legal and compliance review on our members’ behalf to streamline the contracting process, simplify billing, and extend our liability coverage to members.

OCHIN coordinated and paid for the interface and build required to use this product so our members don’t have to, and we are able to make it available for a fraction of market cost.

**GETTING STARTED**

*PMP Gateway and NarxCare are available to OCHIN members through a statement of work. Contact your Account Manager to learn more or get started.*
