OCHIN Broadband Network Services and Telehealth Solutions

All patients deserve access to the best possible health care, regardless of where they live. OCHIN and CTN are proud to offer solutions for network connectivity and telehealth.

Broadband Network Services

Imagine a nationwide health care system connecting rural and urban hospitals and clinics across the country. OCHIN and the California Telehealth Network (CTN)—an OCHIN organization—help hundreds of hospitals and clinics connect to high-speed medical grade broadband networks. We can help you improve access to quality health care for medically underserved and rural populations and reduce your broadband costs.

- Competitive Bidding
- Subsidy Funding (depending on availability)
- 24/7 Network Monitoring

Telehealth Solutions

OCHIN and CTN offer a full suite of products and complementary services to support virtual care, telehealth, and video conferencing, including:

- Grant Writing
- Assessments and Consulting Services
- Implementation Planning and Project Management
- Telehealth Education and Program Implementation from the California Telehealth Resource Center
- Telehealth Specialty Provider Matching
- Technical Support
- Operations and Technical Training
- eConsult, Video Conferencing, and Medical Peripherals

OCHIN Advocacy Helps Expand Broadband Subsidies for Clinics

When the FCC threatened in early 2018 to cut funding to its Healthcare Connect Fund retroactively by 17%, OCHIN jumped into action. Rural health centers across the U.S. rely on this program to help fund broadband network connectivity.

Working with policy makers and stakeholders, we helped convince the FCC to not only restore funding, but also to increase the program’s funding cap by $180 million. Now more clinics can connect to high speed broadband that is essential to providing quality coordinated care.

We continue to lead advocacy efforts to expand and improve federal programs and funding to enable more communities to benefit from broadband and telehealth programs.
