From Start to Clinic, SOFIE is dedicated to supplying theranostics and innovative technologies for personalized medicine.

SOFIE, alongside our Pharma and Academic partners, seeks to revolutionize clinical diagnostics and therapeutics to better understand and treat the biology of disease. We are increasing the adoption and application diversity of theranostics by removing the cost and complexity traditionally associated with the technology. With a full line of imaging and radiochemistry systems, a premier radiopharmacy network and contract manufacturing organization to supply novel agents for diagnosis and therapy, we’re on a mission to improve patient’s lives with amazing people, ideas, and products.

Core PET Imaging Products include:
- F-18 FDG
- F-18 NaF

Delivering the Next Generation of Imaging Agents

SOFIE is taking bold steps toward the future of nuclear medicine and molecular imaging through its support for the development of the next generation of disease-specific tracers and companion therapeutics. Our research efforts include custom radiolabeling and development services, as well as manufacturing clinical trial and commercial doses of promising diagnostic and therapeutic isotopes.

The SOFIE Network Delivers Unique Radioisotope Services and Supply

SOFIE is committed to the on-time delivery of the medical isotopes our clients need to diagnose and treat critical illnesses every day. We provide our clients with quality radiopharmaceuticals, reliably delivered with care. SOFIE takes pride in its record of having a 99% cyclotron uptime, allowing us to successfully deliver more than 350,000 doses annually, servicing imaging centers from coast-to-coast.

14 Radiopharmacies + 2 Corporate Offices + 2 Contract Manufacturing
- Albany, NY
- Dallas, TX
- Washington, D.C. (Corp)
- San Jose, CA
- Boston, MA
- Kansas City, MO
- Kansas City, KS
- Los Angeles, CA (Corp)
- Morgantown, WV
- Cleveland, OH
- Richmond, VA (RCM)
- Chicago, IL
- Orlando, FL
- New Brunswick, NJ
- New Brunswick, NJ (RCM)
- Springfield, MO
- Washington, D.C.
- New York, NY

A Breakthrough in the Race Against Time

In the development and manufacturing of theranostics and innovative technologies, timing and quality are imperative. Starting with a partner that provides a complete solution for pre-clinical through commercial supply will minimize the barriers to success. Our Radiopharmaceutical Contract Manufacturing (RCM) services link novel Intellectual Property to effective clinical application, providing:

- A broad range of subject matter expertise and experience
- GMP/GLP 21-CFR-Part 211 facility with best-in-class production assets
- A robust Quality Management Program (QMP)
- National and global logistics expertise
SOFIE

The early vision for molecular imaging was to revolutionize clinical diagnostics and therapeutics to better understand and treat the biology of disease. Today, SOFIE brings that vision to life by increasing the adoption and application diversity of theranostics by removing the cost and complexity traditionally associated with the technology. With a full line of imaging and radiochemistry systems and a premier radiopharmacy network and contract manufacturing organization to supply novel agents for diagnosis and therapy, SOFIE is dedicated to improving patient health - from start to clinic.
