Instructions:

1. Cut out figures A and B along the solid line
2. Mountain fold on dashed lines
3. Turn your craft over so that the printed side is faced down and apply glue onto the non-colored part of the bird’s head, beak, and the worm.
4. Fold and align the bird’s head together, color side facing out.
5. Tape the center of figure B onto the white square on figure A, color side up.
6. Fold and tape the head tab to the opposite side.
7. Tape the body tab onto the opposite side to form a ring.

A name reclaimed

In Hawai‘i, the name given to a person, place, or thing is very important because it defines the connection to its identity, origin, and individuality. The endemic ‘Alawī, found in Hawai‘i and nowhere else in the world, is one of four endangered rain forest birds. For over a hundred years, the ‘Alawī was known as the Hawai‘i Creeper. In February 2017, UH graduate Noah Gomes rediscovered the true Hawaiian name for this species, ‘Alawī, shining a light on the ecological importance of the ‘Alawī and strengthening its connection to the culture, people, and land.
