Child care is vital to a community’s well-being but Hawai‘i’s fragile system has been devastated by the pandemic

An extensive body of research shows that a child’s experiences in the first years of life have a measurable impact on brain development and later success in school and life. For more and more children, these early life experiences take place in child care. High-quality child care provides children with the learning environment that is critical for school readiness and leads to improved educational, economic, health and well-being outcomes for children, lasting into adulthood.¹

Pre-pandemic¹
- Over half of Hawai‘i’s children (0-5) were in non-parental child care 10+ hours/week
- Hawai‘i’s child care industry generated some $300 million in state-wide revenue each year

Pandemic related challenges lead to
- Increased costs to implement new health and safety requirements
- Loss of staff to other sectors
- Decreased revenue from limited enrollment and capacity

More than 3,600 child care spaces for children (0-5) have been lost during the pandemic in Hawai‘i.

Where licensed child care is available, high tuition puts care out of reach for many families.

Percent of family income spent on child care
- Federal benchmark for child care affordability⁷
- Single parent
  - Household Income 200% of FPL $40,080³
  - Avg cost $822⁶
- Two parents
  - Household Income State Median $ 108,498⁸
  - Avg cost $1,537 + $921¹¹

"True cost" of licensed child care is 42% more than the typical prices programs charge.¹²

Tuition rates do not represent the true cost of operating programs at high-quality standards, with fairly compensated teaching staff. Most child care programs operate with razor-thin margins which pose significant challenges to providing high-quality care and maintaining the business viability necessary to sustain capacity and services.
When it comes to child care, quality is essential and the workforce is key to quality.

Key indicators of high-quality child care include:
- Low adult:child ratio
- Positive and meaningful adult-child interactions
- Strong environments and curricula

All of these depend on an effective, well-trained, and fairly-compensated workforce. This workforce, however, suffers from chronically low wages and turnover.

The COVID-19 crisis has disproportionately impacted:
- working mothers
- women who make up the vast majority of the child care workforce

Women have traditionally been overrepresented in low-wage jobs, such as child care, many of which were disproportionately cut during the pandemic. In the first year of the pandemic, nearly 30% more women than men left the labor force, largely linked to the closure of child care programs and the shifting of child care responsibilities to mothers.

Child care makes a significant difference in the economic health and security of families. It makes it possible for families to work, reduce their dependence on public assistance, and escape poverty. When low-income families receive assistance with child care, they are more likely to enter and remain in the workforce, work more hours, and improve earnings.

The COVID-19 crisis has highlighted both the important role child care plays in enabling parents to work and the instability of child care businesses.

In order for Hawai`i to rebuild from the pandemic and meet the child-developmental, school-readiness, employment, and economic needs of the state, the state must support and sustain the child care sector and improve children and families’ access to high-quality services.
