The U.S. Environmental Protection Agency’s Center for Public Health and Environmental Assessment (CPHEA) is pleased to announce an exciting educational opportunity geared toward students and post-doctoral trainees. This program affords trainees to learn more about the intersection of science research and science policy, and work with EPA human health risk assessment scientists and staff starting this summer. Participants of this opportunity would work closely with CPHEA staff as part of a team conducting an assessment. Through this process students would learn about risk assessment (e.g. hazard identification, mode of action analysis, dose-response analysis), systematic review, and new computational tools being utilized in evidence analysis. These non-laboratory positions are ideal for students interested in learning more about the application of toxicological, epidemiological, and environmental research to support science decisions related to risk assessment.

CPHEA is currently seeking applications for student and post-doctoral interns for Summer 2020. Given the necessary lead time for onboarding, we encourage interested participants to submit their application by April 15th, 2020. This position does not require study in a particular discipline, but applicants with coursework or experience in the following areas are strongly preferred: biology, ecology, toxicology, environmental science, public health, epidemiology, bioinformatics, molecular biology, statistics, or a related field.

For more information on the eligibility requirements and how to apply, see the attached document.

We invite you join one of our upcoming information sessions to learn more about this educational opportunity:
- Wednesday March 4th, 2020 3:30pm – 4:30pm EST
- Monday April 13th, 2020 3:00pm – 4:00pm EST
