Adopted by the Metropolitan Development Commission as an element of the Comprehensive Plan for Indianapolis and Marion County

February 21, 2019
2019-CPS-R-001
METROPOLITAN DEVELOPMENT COMMISSION
OF MARION COUNTY, INDIANA

RESOLUTION NO. 2019-CPS-R-001

RESOLUTION 2019-CPS-R-001, amending a segment of the Comprehensive or Master Plan of Marion County, Indiana, Thrive Indianapolis.

Be it resolved that, pursuant to I.C. 36-7-4, the Metropolitan Development Commission of Marion County, Indiana, hereby amends the Comprehensive or Master Plan for Marion County, Indiana, by the adoption of Thrive Indianapolis, which is attached hereto and incorporated herein by reference as an amendment to the Comprehensive or Master Plan of Marion County, Indiana.

Be it further resolved that the Secretary of the Metropolitan Development Commission is directed to certify copies of this Resolution 2019-CPS-R-001 amending the Comprehensive or Master Plan of Marion County, Indiana, Thrive Indianapolis.

Be it further resolved that the Director of the Department of Metropolitan Development is directed to mail or deliver certified copies of this Resolution 2019-CPS-R-001, to the Mayor of the City of Indianapolis, the City-County Council of Indianapolis and Marion County, the Board of Commissioners of Marion County, Indiana and to the legislative authorities of the incorporated cities and towns of Marion County, Indiana that are directly affected by this plan: Beech Grove, Lawrence, Southport, Speedway, Clermont, Crows Nest, Cumberland, Highwoods, Homecroft, Meridian Hills, North Crows Nest, Rocky Ripple, Spring Hill, Warren Park, Williams Creek, Wynnedale. The Director shall also file one (1) copy of the Resolution and one (1) summary of the plan in the office of the Recorder of Marion County.

DATE: 2.21.2019

APPROVED AS TO LEGAL FORM AND ADEQUACY THIS 13th DAY OF FEBRUARY, 2019.

Christopher Steinmetz, Assistant Corporation Counsel
Dear fellow Indianapolis residents,

As climate change continues to take its toll in cities around the world and we feel its effects in Indianapolis through extreme weather events, it is more imperative than ever that our city continues to play a lead role in sustainability and resilience. Thrive Indianapolis is the first actionable plan on these topics in our city’s history and brings together City agencies, community partners and residents from all backgrounds and walks of life. It charts a course for an Indianapolis that is equitable, healthier and prepared for the challenges of the 21st century.

In March 2017, we committed to achieving carbon neutrality by 2050, and this plan provides more details for how we will get there. While eliminating emissions is essential, we also must prepare for the changes our community is already facing and that are headed our way. We know that our most vulnerable will be disproportionately impacted by climate change and will require more assistance to meet these new challenges. We must prioritize equity in project implementation, leveraging the Social Vulnerability Index that was developed through this process.

Equity is not just a priority for the implementation phase, however. It was also a priority all throughout the creation of Thrive Indianapolis. In designing this plan, City staff and members of our engagement team specifically reached out to those who will be most affected by climate change, attending and hosting more than 150 events throughout the community to spread the word and gather input.

With our winning bid for the Bloomberg Philanthropies’ American Cities Climate Challenge in October 2018, we are well on our way to implementation of Thrive Indianapolis. Indianapolis is one of only 20 cities to receive this prestigious grant, and we are proud to be selected to be at the forefront of climate action and set the example on community sustainability and resilience.

I hope you will join us in our efforts to build a thriving city. Together, we will create a more resilient future.

Sincerely,

Joe Hogsett
Mayor
City of Indianapolis
On behalf of the Office of Sustainability, I would like to express my deepest gratitude to the Community and Municipal Task Forces and the environmental stakeholders who helped in the development of the City’s first-ever sustainability and resilience planning document, a significant milestone for our City and future generations.

This was indeed a community-driven process, with an equitable engagement at its core. Over the course of seven months, the Thrive Indianapolis Team engaged the public by integrating comments from educational, conversational, and action-oriented events throughout the city, collecting 3,152 survey responses and promoting dialogue through social media and an online engagement platform. Through these efforts, we reached more than 265,000 Indianapolis residents. The thoughtful contributions of our community members through this robust engagement process helped craft a plan centered on our shared values.

Our overarching goals of increasing community resilience through a focus on equity and achieving net zero greenhouse gas emissions by 2050 position us as leaders in this field, and we are excited to get to work with our community partners on implementing the 59 ambitious but achievable actions outlined in the plan by 2025.

Thrive Indianapolis includes strategies to support our infrastructure better, evolve our economy, and make our city more resilient. Furthermore, it strengthens the bonds of our neighborhoods and reinforces principles like inclusion and respect—because we only overcome our greatest threats if we work together as One City.

While the planning process has come to an end, we look to you – our greater community – to continue to engage with our team as we guide our city through implementation. We welcome additional opportunities to collaborate, form new partnerships, and design new initiatives in a continuous process that will contribute to a stronger, more resilient Indianapolis.

My best,

Katie (Lineweaver) Robinson
Director, Office of Sustainability
City of Indianapolis
Thrive Indianapolis was a coordinated effort of:

City of Indianapolis Office of Sustainability
City of Indianapolis Department of Public Works
City of Indianapolis Department of Metropolitan Development
City of Indianapolis Department of Business & Neighborhood Services
City of Indianapolis Department of Homeland Security
Indy Parks
Marion County Public Health Department
Eskenazi Health
The McKinney Green Initiatives Fund

</table>
resilience: The capacity to recover quickly and continue to have opportunities to thrive in the face of challenges.

sustainability: A state where we are meeting the needs of the present without compromising the ability of future generations to meet their needs.
In March 2017, Mayor Joe Hogsett pledged that Indy will achieve carbon neutrality by the year 2050. To make good on this commitment and in acknowledgment of the increases in average temperatures and extreme weather events that are putting our people and infrastructure at risk, the City launched the **Thrive Indianapolis** planning process. This plan is the roadmap to reduce greenhouse gas emissions and ensures that all of Indianapolis is prepared for and resilient to the changes we are experiencing. The Office of Sustainability built a coalition to support and fund an integrated plan that was shaped by four core values and eight plan elements that cover all aspects of our community.

The development of Thrive Indianapolis, the first sustainability and resilience action plan in our city's history, brought together City departments, County agencies, community partners and residents to chart a course for an Indianapolis that is equitable, healthier and prepared for the challenges of the 21st century.

The result is a plan with 16 key objectives and 59 ambitious but achievable actions that, together, Indianapolis will strive to accomplish by 2025.
To build a more sustainable and resilient community, we must not only address the direct impacts of climate change, but also look at those existing chronic stressors that limit the ability of some of our community members to enhance their personal resilience. These stressors include living at or below the federal poverty level, experiencing homelessness, living in a high crime neighborhood, being exposed to poor air quality and having limited transportation options. We also know that the people struggling with these chronic stressors are also going to be the ones most vulnerable to the impacts of climate change.

Therefore, Thrive Indianapolis was developed principally through an equitable engagement process. Our street team attended more than 150 events throughout Marion County and along with our social media and online engagement, reached more than 265,000 people. Our focus was to ensure all members of the community had a voice in plan development and, thus, the future of the place they call home. A concerted effort was made to engage those that have historically been underrepresented. The diversity of our community is a source of pride for Indianapolis. As we continue to strive for participation from everyone, it is important to acknowledge the inequities, disparities, and environmental injustices that some of our community members face from historical and systemic discrimination, exclusion, marginalization, exploitation, underrepresentation and disinvestment.

Given the chronic stressors that already exist in our community and the shocks we are experiencing from extreme weather events due to climate change, Indianapolis had to take a stand to protect our home. Thrive Indianapolis is our community’s workplan to do just that. You will see that this plan includes specific actions all of us can help implement over the next few years to put us on the path to not only meet our 2050 carbon neutrality goal, but to build up our infrastructure, economy and neighborhoods in a way that ensures a healthy, resilient future for all.
INDY BEST PRACTICE: Resilience Ambassadors

The City of Indianapolis has hired five resilience ambassadors to serve as resilience- and sustainability-focused community organizers. These individuals are residents of the neighborhoods that they represent, comprising the five Great Places 2020 neighborhoods: Englewood Village, King Commons, Maple Crossing, River West, and Twin Aire. The resilience ambassadors will lead their communities in the development of neighborhood-chosen demonstration projects that will build resilience and improve quality of life. These demonstration projects will be implemented in the summer of 2019.
Thrive Indianapolis was driven by four core values which represent the City's priorities and are the metrics we use to ensure this plan truly addresses our community’s needs.

**[4] CORE VALUES**

- **CAPACITY BUILDING**: Helping residents to build prosperous, interdependent neighborhoods
- **EQUITABLE SERVICES**: Delivering high quality public services to all
- **POVERTY REDUCTION**: Creating pathways to prosperity for all community members
- **FISCAL RESPONSIBILITY**: Managing public resources to meet the present and future needs of the Indianapolis community

**[8] PLAN ELEMENTS**

The plan encompasses eight elements. Each plan element represents an important aspect of the community that needs to be addressed to reach our long-term sustainability and resilience goals. Thrive Indianapolis identifies a vision, objectives and actions for each of the plan elements.
Indianapolis launches Central Indiana Clean Air Partnership to improve Central Indiana air quality through the Knozone program.

Rain garden and native planting area program launches.

City is awarded $10M through the US Department of Energy Better Building Grant Program, resulting in the retrofit of 800 homes, 200 businesses and 20 non-profits in the city’s Near Eastside. The EcoHouse Project Loan Program is also created with Indianapolis Neighborhood Housing Partnership (INHP), providing energy efficiency loans to qualified borrowers in Marion County.

LED traffic signal retrofit: The City changes over 5,000 lights in 2008. These changes lead to 125,205 kWh saved.

Indianapolis is among first communities in the nation to become STAR certified and is the first to recertify in 2017.

City of Indianapolis Office of Sustainability is created with a focus on identifying long term cost savings, building our economy, improving the local environment and enhancing our quality of life.
Indy Rezone: The City’s first comprehensive update to the zoning code since UniGov, IndyRezone builds in environmental performance through application of a “green factor” for site and building design.

Indianapolis Power & Light Co. announces it will shut down its last coal-fired generating unit in Indianapolis. IPL retired the final coal unit at its Harding Street Generating Station and completely converted the facility to use natural gas.

Indianapolis International Airport completes phase two of its solar farm, making it the world’s largest airport solar farm - boasting 76,000 photovoltaic solar panels that produce more than 15.2 million kilowatt hours of electricity annually.

The City launches Thrive Indianapolis.

The Office of Sustainability and IUPUI host the Indianapolis Sustainability Summit, a first-of-its-kind event in Indianapolis attended by more than 300 people that highlighted the impact of collaborative efforts to advance sustainability and build a stronger community.

The City completes its first community-wide greenhouse gas emissions inventory and climate vulnerability assessment.

Indianapolis is one of 25 cities in the US that will share a prize from Bloomberg Philanthropies worth $70 million to accelerate efforts to reduce carbon emissions and prepare for the effects of climate change.

The City and Mayor Joe Hogsett pledge to achieve carbon neutrality by the year 2050 and launch “It’s My City,” a three-year campaign dedicated to creating an Indianapolis that is cleaner, greener and more beautiful.

The City joins the “We Are Still In” coalition, a bi-partisan group of governors, mayors, businesses and universities committed to promoting sustainability and reducing carbon emissions.

Mayor Hogsett announces Operation Night Light, a partnership with IPL to retrofit more than 27,000 high pressure sodium (HPS) street lights to light-emitting diode (LED) technology over a three-year period. This will ultimately save money, slash GHG emissions and improve our community.
INDY TODAY

Indianapolis is a unique and diverse city with a favorable central location, a strong workforce and a lower cost of living than many other cities. For these reasons and more, Indianapolis is a very attractive place for people and businesses to call home.

⁷ Fortune 500, 2017

*This percentage is a projection based on past trends and does not include potential future climate refugees.
HOW’S INDIANAPOLIS DOING?

Indianapolis has made significant strides to grow our economy, promote energy efficiency and renewable energy and expand transportation options throughout Marion County. However, there is still work to do. For example, despite having a lower cost of living than many US cities, we still have a large population burdened by the cost of housing, children that are food insecure and adults struggling with obesity and mental health issues. Through implementation of Thrive Indianapolis, we strive to leverage our strengths to address these challenges together.

SUCCESES

ECONOMY

- 3rd highest growth rate in tech jobs from 2013 to 2015 in the nation⁸

ENERGY

- Indy is 4th in the nation on solar per capita⁹

- #1 largest airport solar array in the world¹⁰

ECONOMY

- 2,000 youth involved in Project Indy in 2017¹¹

BUILT ENVIRONMENT

- 249 total green buildings in 2018¹²

ENERGY

- #1 largest airport solar array in the world¹⁰

ECONOMY

- Indy is 4th in the nation on solar per capita⁹

ECONOMY

- 2,000 youth involved in Project Indy in 2017¹¹

TRANSPORTATION & LAND USE

- 54% of people live within 1/2 mile of IndyGo bus service¹³

- 104 miles of bike lanes¹⁴

- 798 miles of IndyGo bus routes¹⁵

- 211 parks¹⁶

TRANSPORTATION & LAND USE

- 54% of people live within 1/2 mile of IndyGo bus service¹³

TRANSPORTATION & LAND USE

- 104 miles of bike lanes¹⁴

NATURAL RESOURCES

- 211 parks¹⁶
**CHALLENGES**

**ECONOMY**

35% of Marion County residents are burdened by the cost of housing, meaning they spend 30% or more of their income on housing.\(^{17}\)

**FOOD & URBAN AGRICULTURE**

9% of Indianapolis residents are low-income and must travel greater than one mile to the nearest supermarket.\(^{18}\)

20% of children are food insecure in Indianapolis.\(^{19}\)

60% of the Indianapolis population is especially vulnerable to poor air quality.\(^{20}\)

**HEALTH & PUBLIC SAFETY**

Like most of the US, Indianapolis has seen an increase in adult obesity rates.

\[
\begin{array}{cccc}
2004 & 25.6\% & 2015 & 33.9\% \\
\end{array}
\]

10% of households subscribe to curbside recycling.\(^{23}\)

SHOCKS & STRESSORS

Over the last century, we have experienced several shocks from floods to heat waves, each one presenting unique challenges to city services and residents. Indianapolis, like all cities, also has existing challenges, or chronic stressors, like poverty and poor air quality, that need to be addressed to ensure a more sustainable and resilient future for all. Thrive Indianapolis has mapped out specific actions we can all take to start to address these chronic stressors that make us even more vulnerable to the shocks that come our way. Together, we can create a more resilient future.

**shock:** An acute natural or human caused event threatening major loss of life, damage to assets and a city’s ability to function and provide basic services.

**stressor:** A chronic natural or human caused event or phenomenon that renders a community less able to function or meet basic needs.
Examples of regional shocks and stressors that have impacted the people of Indianapolis over the past century.

**1913 White River Flood**
White River rises 6 feet in 24 hours, inundating many neighborhoods. Five residents die and 7,000 are left homeless.

**1932 Great Depression**
Unemployment skyrockets, and residents establish a shantytown along White River downtown.

**1963 Coliseum Explosion**
A propane leak at the Indiana State Fairgrounds Coliseum causes a violent explosion, killing 74 and injuring more than 400.

**1969 Civil Unrest**
A two-day riot erupts along Indiana Avenue in response to unaddressed social problems and tensions between residents and police.

**1978 Blizzard**
A record-breaking blizzard brings nearly 16 inches of snow, burying houses, collapsing rooftops and shutting the city down.

**1983 Severe Drought**
Fifty-seven Indiana counties are designated drought disaster areas after experiencing unrelenting heat and severe crop losses.

**Early 2000s Tornadoes**
Several tornadoes tear through Indianapolis, some of which take the same path. This results in over $88 million in property damage.
2011 State Fair Stage Collapse
Strong wind gusts cause a temporary concert stage to collapse, killing 7 and injuring 58.

2014 & 2018 Extreme Winter Weather
Indianapolis residents and the city's infrastructure feel the effects of wind chills as low as -20 to -35 degrees during two recent winters.

2012 Heat Wave & Drought
2012 is ranked the warmest year on record for Indiana. The national air quality standard for ozone is exceeded 27 days that year.

2005 Katrina Evacuees
More than 3,000 people flee hurricane devastation around New Orleans and take up residence in Indianapolis, some permanently.

2008 Great Recession
The Great Recession hits Indianapolis along with the rest of the world, causing significant economic challenges such as unemployment and loss of financial security.

2011 Ice Storm
Up to an inch of ice falls across parts of central Indiana from January 31st to February 2nd. High winds in addition to the ice knock down trees and power lines—over 80,000 residents experience power outages, some for days.

2008 Remnants from Tropical Storm Grace
Moisture from the remnants of Grace drops heavy rainfall across central Indiana, including a record one-day total of 7 inches (178 mm) in Indianapolis. Rising waters back up the sewage system, flood streets and infiltrate over 700 homes.
The climate in the City of Indianapolis is changing. These changes are primarily seen in temperature and precipitation, which then create a cascading effect of impacts on our people, infrastructure and natural resources. The significant spike in these changes over the last century is due to human activity, including how we light, heat and cool our homes, how we get around, the waste we produce and what we eat. Implementing the actions identified through Thrive Indianapolis is a big step forward in addressing these significant new challenges facing our community.

### PROJECTED CHANGES IN AVERAGE ANNUAL PRECIPITATION BY SEASON IN 2050

---

*All data on this page: Great Lakes Integrated Sciences + Assessments*
National assessments of climate risk have repeatedly demonstrated that those who are the most vulnerable will be the ones most impacted by a changing climate. Through the Thrive Indianapolis planning initiative, the City of Indianapolis completed a Multi-Hazard Mitigation Plan and a Climate Hazard and Social Vulnerability Assessment. This led to the development of a Social Vulnerability Index which identifies areas of greatest need for capital improvements. There are numerous factors that may increase a person's vulnerability to shocks, stressors and the impacts of climate change. It is important to note that the various socio-economic criteria are not mutually exclusive. The Social Vulnerability Index (SVI) was developed by indexing 12 socioeconomic factors and combining the results in a map highlighting some of Indianapolis' most vulnerable neighborhoods.

**THE 12 SOCIOECONOMIC FACTORS INCLUDE:**

1. People living below 200% of the federal poverty level
2. Adults aged 65 and over
3. Youth under 17
4. No-vehicle households
5. People with a disability
6. People with limited English proficiency
7. Renters
8. People over 18 without a high school diploma
9. Households receiving SNAP benefits or food stamps
10. Households with mortgages greater than 30% of income
11. People who self-describe as other than white/Caucasian
12. Unsheltered homeless

Data Sources: US Census Bureau 2011-2015 American Community Survey 5-Year Estimates, Indianapolis MPO, and City of Indianapolis
The Social Vulnerability Index developed for the Climate & Hazard Vulnerability Assessment was applied to map layers representing the projected climate impacts - those areas most vulnerable to high temperatures and to flooding. This is an important way to identify our greatest areas of concern, as we know our vulnerable populations will have a reduced ability to respond to these projected impacts.

The map below shows where our most vulnerable populations reside and the summertime maximum temperatures. Given that heat is the number one weather-related killer, those areas outlined in purple with the reddish orange background are priority areas for enhancing community resilience.

The value that trees bring to a neighborhood is immense - from improving air quality to reducing temperatures and energy use to delivering mental health benefits. Our tree canopy contributes to our resilience to extreme heat. Those areas in the map below that are outlined in bright pink with a light green background are where we will want to focus our efforts to enhance our tree canopy.
What "Vulnerable" Does and Does Not Mean
An individual’s race, ethnicity, gender identity, sexual orientation, age, social class, physical ability or attributes, religious or ethical values system, national origin, immigrant status, linguistic ability or ZIP code does not make him/her inherently vulnerable. When we refer to "vulnerable" populations, we do so in the context of acknowledging the system's deficiencies rather than as a judgment of any particular community members or neighborhoods.

Thrive Indianapolis - and the sustainable and resilient future we aim to create - is for all Hoosiers, the foundation of which will be actions that prioritize identifying and addressing our greatest vulnerabilities.

SOCIAL VULNERABILITY: FLOODING

The map below shows the areas within Marion County that are impervious surfaces, such as asphalt and concrete, which do not allow water to be absorbed. In addition to contributing to high heat, impervious surfaces in place of natural ones exacerbate our vulnerability to flooding. The areas of greatest risk are those outlined in bright pink with the black backgrounds.

An estimated 166,335 people in Marion County are living below 200% of the federal poverty level and are located in a flood zone. The colors on the map indicate the number range of people that meet these factors throughout the county.

Impervious Surface Areas

People in Floodplain Below Poverty Threshold

Social Vulnerability

Equity Index is based on combined densities of people below 200% of the federal poverty level, adults aged 65 and over, youth under 18, no-vehicle households, people with a disability, people with limited English proficiency, renters, people over 18 without a high school diploma, households receiving SNAP or food stamps, households where mortgage is <30% of income, people who self-describe as non-white and unsheltered homeless.

Data Source: Indianapolis DPW, US Census

An estimated total of 166,335 people are below 200% of the federal poverty level AND live in the 1% Annual Chance Flood Zone

Data Source: US Census Bureau 2012-2016 overlay analysis with FEMA Flood Zones
PREPARING FOR A CHANGING CLIMATE

BUILDING COMMUNITY RESILIENCE

Even if everyone on Earth stopped emitting all greenhouse gases today, there would still be some change that we have already set in motion, due to the lifespan of these gases in the atmosphere. Therefore, it is essential that we take action to reduce greenhouse gas emissions while also preparing for the impacts. Using what we know about the changes in climate, we can identify the best opportunities to enhance our community’s economic, infrastructural, environmental and social resilience. Thrive Indianapolis has identified a number of actions to do just that.
MINIMIZING OUR IMPACT

GREENHOUSE GASES (GHGs)

Greenhouse gases (GHGs) are essential to life on Earth. They provide a "blanket" in our atmosphere, trapping heat and regulating the Earth's temperature. However, when we burn fossil fuels to power our homes, businesses and automobiles and place material in our landfill to decompose, we increase the level of GHGs in the atmosphere. This increase in gases has essentially created a much thicker "blanket" and has led to disruptions in the Earth's climate -- resulting in the increases in temperatures and precipitation we are already seeing.

greenhouse gases:
(plural noun) Those gases in the atmosphere, both natural and human caused, that absorb and emit heat, causing the Earth to be warm enough to live on. The primary, naturally occurring greenhouse gases in the Earth’s atmosphere are water vapor (H₂O), carbon dioxide (CO₂), nitrous oxide (N₂O), methane (CH₄) and ozone (O₃). There are also a number of human-made greenhouse gases in the atmosphere, including sulfur hexafluoride (SF₆), hydrofluorocarbons (HFCs) and perfluorocarbons (PFCs).
As GHGs rise so do the number and the intensity of extreme weather events, such as torrential rains that contribute to flooding and destroy homes and infrastructure. Temperature increases can contribute to poor air quality and negatively impact the health of the people of Indianapolis, specifically the young, older adults and those with existing asthma or other respiratory issues. For Indianapolis to thrive, our community must act to both understand and reduce our contribution to GHG emissions in the air. The benefits of doing so go well beyond addressing a global challenge. Perhaps more importantly we build a safer, cleaner, healthier Indianapolis for all.

As part of the Thrive Indianapolis planning project, the City of Indianapolis conducted a baseline and two interim year GHG emissions inventories to understand our starting point and how our actions to date have impacted that. The community-wide GHG inventory followed international GHG accounting protocols to be consistent with our counterparts across the nation.

The results of the GHG inventories show that despite the total population growing approximately 4% from 2010 to 2016, Indianapolis was able to reduce GHG emissions by 11%. This was primarily due to the conversion of two coal plants and a coal-powered steam plant to natural gas and implementation of energy efficiency measures. We are making progress, but there is still work to do, particularly as it relates to transportation and existing buildings, which many of the Thrive Indianapolis actions address.
2016 Community GHG Emissions by Source in MTCO$_2$e

Indianapolis Community GHG Emissions (MTCO$_2$e) Over Time

What is MTCO$_2$e?

MTCO$_2$e stands for metric tons of carbon dioxide equivalent. GHGs have a heat trapping capacity which varies by gas. Humans produce more carbon dioxide (CO$_2$) than any other GHG. Therefore, we count emissions of GHGs based on how each GHG’s heat trapping capacity compares to CO$_2$’s. This is called the CO$_2$ equivalent (CO$_2$e).

Indianapolis GHG Emissions (MTCO$_2$e) by Sector, Year and Population

All data on pages 23-24: City of Indianapolis & Marion County, 2018
Thrive Indianapolis was developed by working with a Municipal Task Force, a Community Task Force and the public. The City set out to deliver an equitable planning process to ensure that all community members had a voice in the development of this plan, either directly or through organizations that represent them. This was accomplished through a decentralized engagement process that:

- Identified target populations
- Worked with partners to engage the target populations
- Deployed a street team to attend events and activities of these target populations

Over the course of seven months, the Thrive Indianapolis Street Team engaged the public by attending or hosting over 150 events, collecting 3,152 survey responses, and promoting conversations through social media and an online engagement platform. The results were more than 265,000 Indianapolis residents reached.

### Targeted Approach

We held specialized focus groups and training for target populations, including re-entry, veterans, low-income and those experiencing homelessness. To give youth a voice in the future of their city, we held a Community Day with kid- and family-friendly activities. To reach people where they already are and feel most comfortable, we attended various City and community events and held regular pop-ups at the public library and other central locations.

### How This Plan Was Built

#### Municipal Task Force

<table>
<thead>
<tr>
<th>Role: Provide strategic guidance for the development of Thrive Indianapolis.</th>
</tr>
</thead>
<tbody>
<tr>
<td>20 City and County departments and agencies involved</td>
</tr>
<tr>
<td>5 meetings in 2018</td>

"Climate change is causing decreased air quality in all cities. Indy would benefit from more trees to increase oxygen and clean air. Additionally, more urban trees would also improve water quality by absorbing rain run-off."

Thrive Indianapolis Survey #2 respondent (August 2018)

"We all should be interested in growing our own food at this point." But it "depends on the soil that it’s in" because it might be contaminated.

Thrive Street Team interview with a person experiencing homelessness (Central Library, 8/29/18)
"Indianapolis should try to implement renewable energy in some of the City buildings [to lead by example]."

Ella Comerford-Barnett, Age 9, Community Task Force Member

"A thriving Indianapolis includes incorporating all opinions of the community."

Ella Comerford-Barnett, Age 9, Community Task Force Member
BE A PART OF THE SOLUTION

Our ability to thrive and reach a sustainable, resilient future is in all our hands. The City has helped lead the way by driving this planning process. Now we need everyone's help to take actions and keep us moving forward. Here are some easy things you can do today!

**Built Environment**

- Plant a rain garden with native plantings to absorb storm water and replenish our aquifers.
- Plant trees in our community by volunteering for Keep Indianapolis Beautiful.
- Become a KIB Adopt-a-Block captain by committing to keep your street clean of litter.
- Support your local community gardens - or even better, grow your own.
- Replace your shingles with a "cool roof" that is lighter in color, reflecting away light in the summer time and reducing your cooling loads.
- Take advantage of rebates offered by IPL and weatherize your home to protect the interior from the elements (as well as reducing your energy bills!).

**Energy**

- Turn off lights and electronics when not in use - or even better, unplug them. Some electronics continue to use power, even when turned off.
- Switch your lightbulbs to more energy efficient LED lights.
- Turn your heat down and A/C up by two degrees, especially if you are not home or away on a trip.
- Reduce your water heater temperature to 130° F to save energy and money on heating water.
- Schedule a free Home Energy Assessment through IPL to learn of opportunities for energy efficiency and weatherization.
- Enroll in IPL’s Green Power Option to support renewable energy for an additional $2.50 in your electric bill on average.
- Seal air leaks and properly insulate windows to save up to 20% on heating and cooling bills, while also increasing the comfort of your home.

**Economy**

- Shop at small, locally owned businesses.
- Support businesses that have transparent and sustainable practices.
- Mentor a young person to support them in their studies and careers.
- Talk to your children about sustainability and how we can all be more sustainable in our daily lives.
- Encourage the young people in your life to gain job experience and skills development through Employ Indy’s initiatives and programs including Project Indy and Job Ready Indy.
- Access entrepreneurship resources through the Indy Chamber to learn how to start a small business.

**Food & Urban Agriculture**

- Eat more plants, which have been proven to be less carbon and resource intensive than eating animal products. A great place to start is with "Meatless Mondays" or one meat-free meal a day.
- Purchase locally-grown food, supporting local agriculture and minimizing energy spent transporting products.
- Support restaurants and grocery stores that use and sell locally-grown food.
- Buy food that is in season, minimizing the distance food must travel.
- Support your local community gardens - or even better, grow your own.
- Replace your shingles with a "cool roof" that is lighter in color, reflecting away light in the summer time and reducing your cooling loads.
- Take advantage of rebates offered by IPL and weatherize your home to protect the interior from the elements (as well as reducing your energy bills!).

Thrive Indianapolis
Natural Resources

☐ Trade your shower heads and faucets for low-flow, water-efficient options.
☐ Turn off your car if you are idling for more than 30 seconds.
☐ Refuel your car and mow your lawn after 7pm, which helps prevent ground-level ozone.
☐ Purchase an Environmental License Plate, your money will go towards the protection of Indiana’s land, waters and wildlife.
☐ Collect rainwater in rain barrels to water your lawn and/or plants.
☐ Keep a plastic bag in your car to collect trash and prevent littering.

Public Health & Safety

☐ Join the Community Emergency Response Team (CERT) to make Indianapolis more prepared during emergencies.
☐ Join free exercise classes and health programs offered at 11 local parks through Indy in Motion.
☐ Put together an emergency preparedness kit for your household by visiting Ready.Gov.
☐ Check in on the people in your life, especially the elderly and those experiencing mental health problems.
☐ Practice mindfulness by doing yoga, going for a walk or even just taking deep breaths, all of which have been linked to improved mental and physical health.
☐ Store your prescription drugs in a safe location, preventing them from falling into the wrong hands.

Transportation & Land Use

☐ Utilize Pacers Bikeshare when traveling short distances.
☐ Ride the IndyGo bus to work once a week - or even better, every day.
☐ Drive an electric, hybrid or low-emission vehicle.
☐ The best way to warm up your car in the winter time is by driving it. No more than 30 seconds of idling is needed.
☐ Keep your personal vehicle well-tuned and tires inflated properly, saving up to 20% in gasoline use.
☐ Ditch your grass lawn and plant native pollinators that support our wildlife and don’t require mowing.
☐ Plant native trees on your property and preserve the trees you already have.

Waste & Recycling

☐ Bring your own reusable produce and tote bags when grocery shopping to avoid using plastic bags.
☐ Purchase reusable goods like durable water bottles, cutlery, and to-go containers to avoid using single-use plastics.
☐ Never throw hazardous household waste, like batteries and chemicals, in the trash. Dispose of them in an environmentally responsible way, like through ToxDrop.
☐ Make sure to wash and wipe dry your recyclable goods, so as to lower contamination in recycling streams.
☐ Buy gently used, second-hand clothing and avoid “fast fashion.”
☐ Minimize your food waste by first eating what you already have in your fridge. Meal planning and making grocery lists can also reduce your food waste.
☐ Avoid getting food “to-go” to prevent the use of Styrofoam containers, single-use plastics utensils and plastic bags.

**ACTION PLAN SUMMARY MATRIX**

**BUILT ENVIRONMENT**

**BE:1** All new buildings meet basic green building standards,* and programs to increase energy and water efficiency are actively pursued in existing buildings.

| BE:1A | Develop an energy benchmarking and disclosure policy for municipal and commercial buildings with the first-year disclosure completed by the end of 2020. | $ | | 
| --- | | | | 
| BE:1B | Require all new commercial construction to meet electric vehicle (EV) readiness requirements for 20% of parking spaces by 2020, with the goal of significantly increasing charging infrastructure at businesses and workplaces. | $ | |  
| BE:1C | Establish low-interest loans for energy efficiency and renewable energy improvements in new and existing buildings, sustained by a revolving loan fund from a combination of financing sources. | $$$ | |  

**BE:2** All new infrastructure is designed, built and maintained to be resilient to the anticipated impacts of climate change, and investments are prioritized based on the 2018 Vulnerability Assessment.

| BE:2A | Systematically integrate climate change projections into all future capital projects by 2020, ensuring new infrastructure can withstand current and projected impacts. | $$ | |  
| BE:2B | Improve onsite stormwater retention programs by incentivizing rain barrels, rain gardens and green roofs. Register 500 residential and nonresidential properties in the stormwater credit program by 2022. | $$ | |  
| BE:2C | Evaluate the effectiveness of the 2016 Green Factor score-based zoning requirement to determine opportunities for improvement. | $ | |  
| BE:2D | Increase street sweeping operations throughout the county to improve stormwater drainage. | $$ | |  

---

* i.e., basic requirements of green building programs that focus on minimum energy and water standards

---

**LEGEND**

- $ = capital cost (<$1m) / program implementation (<$100k)
- $$ = capital cost ($1-5m) / program implementation ($100-500k)
- $$$ = capital cost (>5m) / program implementation (>500k)

</tr>
</tbody>
</table>
PUBLIC HEALTH & SAFETY

PH:2 Increase community resilience through public health and safety measures that are equitably deployed.

PH:2A Increase the number of residents with emergency preparedness resources and training in our most vulnerable neighborhoods based on the 2018 Vulnerability Assessment before 2022.

PH:2B Launch a coordinated preparedness campaign by 2022 - with City departments, emergency management agencies and preparedness organizations - that encourages residents to take actions that improve their ability to protect themselves and our community in advance of a crisis based on 2018 Multi-Hazard Mitigation Plan recommendations.

PH:2C Pilot the city’s first energy resource center with physical, web and mobile resources, acting as a resilience hub for the neighborhood before 2021. Residents will have access to information that better prepares them for natural disasters and other hazards.

PH:2D Expand workforce preparedness training opportunities and programs including climate change information for physicians and other public health providers, to quickly restore essential city services after a crisis before 2022.

TRANSPORTATION & LAND USE

TL:1 The percentage of residents with affordable, multimodal transportation options has increased at least 15% over 2016 levels by 2025, specifically among those communities identified as most vulnerable through the Transportation Equity Index.

TL:1A Through equitable redesign, extended hours and completing construction on the bus rapid transit lines, IndyGo will increase transit service by 70% and increase ridership by 15%.

TL:1B Implement existing transportation plans to increase the miles of sidewalks, bikeways, trails and complete streets and the number of intersections with safety and operational improvements.

TL:1C Increase transit-oriented development through high density housing, access to employment opportunities and economic growth with measurably less consumption of energy.

TL:1D Encourage local businesses to adopt commuter incentives for employees, to promote alternative modes of commuting such as walking, biking, and transit.

TL:1E Continue to identify opportunities to create temporary pedestrian-only zones in our cultural and entertainment districts by 2020.

BUILD ENVIRONMENT

OVERVIEW

Buildings, roads, bridges and underground infrastructure are the lifeline of a community. These assets deliver water, provide shelter and create access to jobs, schools, open spaces and so many more basic needs. However, our development patterns and the materials we used to build in the past have impacted our environment and our health. These challenges are only exacerbated as the climate continues to be more unstable. We now have an opportunity to rethink our approach to infrastructure in a way that is in harmony with nature, healthy for our community members and more resilient to climate change.

OUR VISION

Indianapolis constructs and maintains buildings and infrastructure that provide safe, comfortable and healthy environments for all.

WHERE WE STAND IN 2018

Buildings account for 66% of Indianapolis’ community-wide GHG emissions. However, through successful building energy efficiency programs – like Indianapolis Power & Light’s Home Energy Assessment Program and energy generation conversions from coal to natural gas - GHG emissions from the Building sector were reduced by 17% from 2010 to 2016.27

green building

(noun)

A building that is planned, designed, constructed and operated “with several central, foremost considerations: energy use, water use, indoor environmental quality, material selection and the building’s effects on its site.”26

Thrive Indianapolis
INDY BEST PRACTICE: INDY 3.0

Mayor Joe Hogsett believes that government needs to be more accessible and less costly. Indy 3.0 is how we can re-imagine and modernize local government for the 21st century. This initiative will deal with the city’s government buildings; technology, innovation and accessibility to city services; public safety; streets maintenance; and infrastructure.

“With the launch of Indy 3.0 [April 2018], we acknowledge that the future of serving Indianapolis residents looks a lot more like an iPhone than it does a 25 story office building,” said Mayor Hogsett. “And rather than ignore this reality, it’s time to embrace the challenge and make a pledge to taxpayers that we will no longer penalize the present and fight the future, by subsidizing the past.”

LEADING BY EXAMPLE

The City of Indianapolis has committed that all newly constructed municipal buildings built after 2018 meet LEED Certified or equivalent standards.
### OUR PLAN FOR 2025

**BUILT ENVIRONMENT OBJECTIVE 1**

All new buildings meet basic green building standards,* and programs to increase energy and water efficiency are actively pursued in existing buildings.

* i.e., basic requirements of green building programs that focus on minimum energy and water standards

<table>
<thead>
<tr>

ECONOMY

OVERVIEW

A city’s economy dictates the opportunities available to its community members. Indianapolis has seen a transition from manufacturing to more service and computer-based jobs. A thriving Indianapolis will ensure that our industry sectors are diverse, can be supported by our local skills, actively practice and promote sustainability and pay a family-sustaining wage.

WHERE WE STAND IN 2018

It has been said that there are two sides to Indianapolis’ economy. We have made gains with high tech and young professionals, yet struggled to engage our existing residents and their skills. Our focus is now on looking at all our assets and promoting industries that support everyone and pay a family sustaining wage.

Indianapolis is a world-class city with a resilient, diverse and inclusive economy that ensures good paying and fulfilling jobs as well as upward economic mobility opportunities for all.

Indy Best Practice: Project Indy

Project Indy represents a network of community organizations, employers and corporate partners who provide job opportunities, soft-skill development and job-readiness training to in-school and out-of-school youth in Marion County. The effort is designed to connect employers to young adults for summer jobs, part-time and full-time opportunities. Through this program, young adults are kept busy and safe while contributing to the community and local economy.

3,398 young adults registered in 2017

2,000 were hired via employer partners

SUCCESS STORY: SECOND HELPINGS

In 1998, three chefs created Second Helpings Inc. to deal with four major issues in the Greater Indianapolis area: food waste, hunger, job training and a place the local food service industry could go to find trained labor. Second Helpings also works to identify underserved populations and areas of the city that still need access to meals. Its training program involves those that need a life-changing opportunity.

Over the past 20 years their results are impressive:

- 31,237,924 lbs. of food kept out of landfills
- 12,160,353 meals to those in need
- 819 students have completed their Culinary Job Training program

39 All above data: Second Helpings, 2017

LEADING BY EXAMPLE

In an effort to do its part to create demand for sustainable and local products, the City of Indianapolis will develop a green purchasing policy.

<sup>41</sup> The Polis Center at IUPUI, 2015  
<sup>42</sup> U.S. Census Bureau, 2016
ENERGY

OVERVIEW

Changing how we produce and consume energy provides one of the best opportunities to reduce greenhouse gas (GHG) emissions and create a more resilient community. By replacing fossil fuels with renewable energy options, such as solar and wind, Indianapolis can leapfrog other cities across the nation as a leader on climate action.

OUR VISION

Energy comes from clean, renewable sources that are affordable and accessible to all members of our community.

WHERE WE STAND IN 2018

When using fossil fuels, the energy that we generate in our local power plants and use to light, heat and cool our homes and businesses contributes to climate change by emitting a significant amount of GHGs.

There has been a lot of progress made in Indianapolis to reduce our GHG emissions - the most significant being the conversion of two coal-fired power plants and a coal-fired steam plant to natural gas. This resulted in a 60% reduction in GHG emissions related to energy generation. To reach our carbon neutrality goal, we will continue to increase the use of renewable energy throughout our community.

microgrid

(noun)

"A microgrid is a self-contained power system confined to a small geographic area."
LEADING BY EXAMPLE

The City of Indianapolis seeks to establish a revolving loan fund for energy and water efficiency upgrades in municipal buildings.

Bloomberg American Cities Climate Challenge

In October 2018, Indianapolis was named one of 25 cities in the country to share a $70 million prize to accelerate efforts to reduce carbon emissions and prepare for the effects of climate change. For Indianapolis, this will launch a building energy benchmarking program and a Green Business Challenge and accelerate the adoption of electric vehicles throughout the city.
# OUR PLAN FOR 2025

## ENERGY OBJECTIVE 1

20% of energy consumed in Indianapolis comes from renewable sources by 2025.

47 Indianapolis Power & Light Company, 2018
48 Ibid
49 City of Indianapolis & Marion County, 2018
50 Environment America, 2018
Our community’s ability to meet its basic needs - such as accessing healthy food every day - is directly correlated to and an indicator of our overall sustainability and resilience. Unfortunately, this is one of the chronic stressors that impacts many adults and children throughout Marion County. The Food & Urban Agriculture plan element focuses on addressing access to healthy food and increasing food security.

WHERE WE STAND IN 2018

While progress has been made, we still have work to do given that 20% of children in Indianapolis are food insecure. According to the Indy Food Council's 2018 State of the Food System Report, "In 2014 21% of Marion County residents were food insecure, using some form of food assistance or had uncertainty about food supply." We also know that access to healthy, affordable food is inequitable with a disproportionate percentage of people of color experiencing food insecurity.

INDY BEST PRACTICE: Summer Servings Program

The Indy Parks Summer Servings program provides 175,000 meals every year to Marion County youth.

food security

(noun)

“Food security means access by all people at all times to enough food for an active, healthy life.”

## FOOD & URBAN AGRICULTURE

### OUR PLAN FOR 2025

**FOOD & URBAN AGRICULTURE OBJECTIVE 1**

Food insecurity in Indianapolis is reduced 20% by 2025, compared to the 2017 baseline.

INDY BEST PRACTICE: Fresh Produce Pop-Up

In an effort to address food insecurity, the City and its partners opened a fresh produce market at the downtown IndyGo transit center. The market, which will run Fridays from April through October, will accept EBT and SNAP benefits to enhance accessibility for all. The City will invest more than $20,000 in this program through 2019.57

LEADING BY EXAMPLE

In an effort to support local farmers, keep money in the community and reduce greenhouse gas emissions, the City of Indianapolis and Marion County have set a goal to increase the purchase of local food for City contracts.

57 Barrett, 2018
**TRACKING OUR PROGRESS**

To ensure we are on a path to achieve our goals, a number of metrics and associated targets have been identified for the Food & Urban Agriculture plan element. Below are a sample of these metrics. We anticipate these metrics will be updated as more data becomes available. The performance metrics will be reported every three years, and the output metrics will be reported annually.

<sup>59</sup> Indy Food Council, 2018
NATURAL RESOURCES

OVERVIEW

Our natural resources are one of Indianapolis' greatest assets. Aside from the understood value of clean air and water, natural spaces offer the following benefits: help lower energy use; reduce urban heat island; minimize impacts of flooding; promote safe neighborhoods; and support mental and physical health. By ensuring our air and water are clean and that natural spaces are a walk away, we help all our neighbors get that much closer to a more resilient future.

OUR VISION

Natural Resources are clean, conserved and restored where possible and accessible for all members of the community to enjoy.

WHERE WE STAND IN 2018

Despite having a very limited budget, Indy Parks has managed to operate and maintain a large number of parks and facilities across Marion County.

- Marion County's tree canopy coverage is 33%.
- Indy's different neighborhoods had tree canopies ranging from 3-78% coverage.
- 211 parks
- 125 playgrounds
- 135 miles of trails

Indianapolis' urban forests provide stormwater control, carbon sequestration, energy reduction and air pollution filtration resulting in a $10 million annual benefit.

FAST FACT: Bottled Water

The production of bottled water uses 17 million barrels of oil each year, which is enough to fill a million cars for a year.

INDY BEST PRACTICE: KNOZONE

Knozone is an initiative to make Central Indiana one of the Midwest’s most sustainable, livable regions. Through education, resources and guidance for taking action, Knozone works with residents, schools and businesses to improve our region’s air quality, making Central Indiana a great place to live, work and visit.

LEADING BY EXAMPLE

Knozone sponsors "bike for free days" during ozone action days through the Pacers Bikeshare and also partners with Nine13Sports to bring bicycle and air quality education to schools. Additionally, the Knozone Action Days now include alerts related to extreme heat and unhealthy air quality.
**OUR PLAN FOR 2025**

**NATURAL RESOURCES OBJECTIVE 1**

68 City of Indianapolis Office of Sustainability, 2017  
69 Marion County Public Health Department, 2018  
70 Indy Parks, 2016  
71 Indy Parks, 2018
OVERVIEW

The ability of individuals to live healthy lives in a safe community is paramount to long-term sustainability and resilience. While preparing our community members for a changing climate and the associated impacts, we must work together to address the chronic stressors that keep them from reaching their full potential.

OUR VISION

The health and safety of the public is a priority and is addressed through community programs that promote overall well-being and physical activity, as well as work to ensure that all residents are safe, have access to affordable healthcare and are prepared for climate- and human-related hazards.

WHERE WE STAND IN 2018

The 2014 Marion County Community Health Assessment has identified unhealthy weight, mental health, poverty, and chronic disease prevention and management as the top priorities to be addressed. Overweight and obesity trends have continued to increase. Additionally, depression was an ailment identified as impacting every age group from children through seniors. One in five residents live at 100% of the federal poverty level, most of which are concentrated in six zip codes in central Marion County. Finally, asthma, the most common chronic condition of childhood affects double the number of children in Marion County as compared to Indiana or US averages.72

Like most of the US, Indianapolis has seen an increase in adult obesity rates

Thrive Indianapolis
INDY BEST PRACTICE: Community Emergency Response Team

The Community Emergency Response Team (CERT) trains people to be better prepared to respond to emergency situations in their communities. CERT trained community members are able to give critical support to first responders, provide immediate assistance to victims and organize spontaneous volunteers at a disaster site. The CERT program provides an opportunity for citizens to take an active role in local emergency preparedness.

LEADING BY EXAMPLE

All municipal employees that have not already received the Community Emergency Response Team training will be trained by 2023.
To ensure we are on a path to achieve our goals, a number of metrics and associated targets have been identified for the Public Health & Safety plan element. Below are a sample of these metrics. TRANSPORTATION & LAND USE

OVERVIEW

Decisions about transportation options and land use planning play a critical role in determining how we get around and the impact of that travel. In a geographically large city like Indianapolis, it is not feasible to develop in a way that ensures everyone can walk to work. However, we can prioritize redevelopment in neighborhoods that lend themselves to transit or other modes of commuting. Another way to reduce greenhouse gas emissions from transportation is to switch to low-carbon fuels. With a municipal electric utility, we are very interested in the opportunities to reduce GHG emissions through promoting electric vehicles, while also greening our electricity grid.

OUR VISION

Transportation & Land Use are connected systems that focus on equitable accessibility to multiple modes of low-emission transportation and development that creates active living spaces that are affordable, multi-use and foster inclusive neighborhoods.

WHERE WE STAND IN 2018

The current state of transportation is heavily skewed towards the use of personal vehicles. The necessity for a personal vehicle is high: while 86% of jobs are accessible in 30 minutes by car, only 20% are accessible in 1 hour by public transit. This is undoubtedly a contributor to the 5% increase in transportation-related GHG emissions from 2010-2016.

FAST FACT: Driving Alternatives

Through implementation of the Marion County Transit Plan and the installation of 104 miles of bike lanes, Indianapolis is heading in the direction to provide affordable and safe alternatives to driving.

Thrive Indianapolis
TRACKING OUR PROGRESS

To ensure we are on a path to achieve our goals, a number of metrics and associated targets have been identified for the Transportation & Land Use plan element. Below are a sample of these metrics. We anticipate these metrics will be updated as more data becomes available. The performance metrics will be reported every three years, and the output metrics will be reported annually.

<table>
<thead>
<tr>
<th>PERFORMANCE METRICS (reported every three years)</th>
<th>BASELINE DATA</th>
<th>BASELINE YEAR</th>
<th>2025 TARGET</th>
</tr>
</thead>
<tbody>
<tr>
<td>% of commuters who drive alone&lt;sup&gt;84&lt;/sup&gt;</td>
<td>85%</td>
<td>2013</td>
<td>75%</td>
</tr>
<tr>
<td>Total GHG emissions from the transportation sector&lt;sup&gt;85&lt;/sup&gt;</td>
<td>4,947,294 MTCO&lt;sub&gt;2&lt;/sub&gt;e</td>
<td>2016</td>
<td>3,957,835 MTCO&lt;sub&gt;2&lt;/sub&gt;e</td>
</tr>

INDY BEST PRACTICE: Indy Moves Pedal Indy Plan

Part of the Indy Moves plan that combines the city’s many transportation initiatives into a united vision, Pedal Indy aims to create a low-stress bicycle network that is accessible and welcoming for people of all ages and bicycling abilities. To accomplish this, the plan lays out 35 distinct projects that create new neighborhood connections, improve access to major destinations, and fill gaps in the existing bike network. Pedal Indy promotes actions that maximize safety through protected infrastructure and education and supports programs that encourage people to bike more (e.g., community rides and competitions).

WASTE & RECYCLING

OVERVIEW

While greenhouse gas (GHG) emissions for Indianapolis’ Waste sector are less than 1% of total community-wide emissions, Waste is the fastest growing sector for GHG emissions with more than a 50% increase between 2010 and 2016. Our Waste sector has a significantly greater impact on our health and environment when we look at the lifecycle emissions (which the nationally accepted GHG Accounting Protocols do not take into account). A lifecycle analysis would look at all the energy and materials that are required to create the products that we are throwing away - often after only one use. The actions in Thrive Indianapolis seek to reduce the impact of the Waste sector and help grow an economy around the resources that are currently being disposed of by our community.

OUR VISION

The impact that waste has on our health and the environment is significantly minimized because we have found creative ways to reduce the amount of waste in products, limit how much we consume and increase recycling and reuse.

the circular economy (noun)

“A closed loop system that turns the traditional ‘take-make-use-dispose’ approach on its head: products are designed to be reused, reducing waste piling up in landfills and decreasing the need for new materials.”

$$ = capital cost ($1-5m) / capital investment annual maintenance ($250k-$1m) / program implementation ($100-500k) / program annual maintenance ($50-100k)
$$$ = capital cost (>5m) / capital investment annual maintenance (>$1m) / program implementation (>500k) / program annual maintenance (>$100k)

 Favorable | Neutral | Unfavorable
**LEADING BY EXAMPLE**

In 2017, Mayor Hogsett launched the "It’s My City" campaign, a three-year effort designed to improve our city to a clean, green and beautiful home.

---

**FAST FACT:**

The reuse, recycling and composting industry creates $10x$ more jobs than the disposal industry.\(^{97}\)

\(^{97}\) Wheeler, 2013
TRACKING OUR PROGRESS

To ensure we are on a path to achieve our goals, a number of metrics and associated targets have been identified for the Waste & Recycling plan element. Below are a sample of these metrics. INDY BEST PRACTICE:
Indianapolis Thriving Schools Challenge

The Thrive Indianapolis Schools Challenge aims to energize students, educators and parents to take action on and ownership of sustainability. The City of Indianapolis Office of Sustainability, in partnership with Earth Charter Indiana, is providing support and guidance to participating schools to create new projects that engage children and young adults around important topics like environmental stewardship, social responsibility, waste reduction and resource conservation. These projects will make our community and schools healthier places to live, learn and grow.
