America SCORES Bay Area Middle School
Soccer Curriculum
Grades 6-8 | Ages 12-14 | 2018-2019

Being part of a year-round soccer team gives kids a sense of belonging and provides them abundant opportunities to be physically active and socially engaged. At the social and emotional level, we approach soccer from a holistic point of view where our main purpose is to foster confidence, personal motivation, resilience, happiness, and a sense of community belonging in all of our players.
Letter from America SCORES Bay Area:

Dear SCORES coach,

Thank you for being a part of our SCORES team. As a coach and mentor, you are in a unique position to guide with kindness and professionalism our SCORES participants in this soccer season. We hope that this soccer curriculum is useful to you in teaching the "beautiful" game to your players.

We wish you a great season!

Info about Youth Development........33

WHAT ARE WE TRYING TO ACHIEVE?

This soccer curriculum provides an opportunity to create a relevant, coherent and engaging soccer practices with unique progressions and healthy competition throughout the practices. Purposes not only provide a reference point for decision making but also a direction on how learning experiences are to be organized.

Methodology: The America SCORES Bay Area Soccer Curriculum serves as a resource for the program’s coaches and mentors. From the warm-up to the cool down phase, each session focuses on the same soccer skill so kids can master the skill. It is very important to know well the soccer skill that you are working on so you can provide the proper corrections, and progressions. It is designed as a 12-week program. Coaches are expected to talk about nutrition for this curriculum as each session contains a nutritional theme. Ideally, a full practice session should run for 90 minutes from start to finish. But, we know that some sites can only practice for 60 minutes. Each coach must modify the length of the sessions according to his or her own specific needs. Yet, it is very important that coaches are able to deliver all the steps/progressions of the practice.
DAILY SCHEDULE

1. Staff Set-Up: try to set up the field before your players get to the field. 5 min

2. Opening Circle & Warm-Up: check in with your players, introduce nutritional theme and soccer theme and lead your group into the warm up. 10 min

3. Activity 1: during this phase, players practice the skill with no opposition.

4. Activity 2: 1 V 1, 2 V 2: during this phase, players practice the skill in a 1 V 1 circumstances. This phase serves a thermometer for players for we get to see them in action against active defenders.

5. Economical Games: a modified scrimmage with a tactical variant for the first part of the game. Then is a free match.

6. Cool Down & Closing Circle: it is very important to review the content of the soccer/nutritional themes. Provide positive feedback to your players.

GAME MANAGEMENT

On game day:

- Arrive before all players and parents and be prepare to give your team a proper warm-up. Use
- Introduce yourself to opposition coach to find out club policy (when away) and answer any questions they have (when at home). Club (and team) policies vary, so it is important you respect theirs when they are hosting.
- Set up warm-up area (if space available).
- Inform parents of where to set-up (opposite side from coach).
- Have players move bags as near to technical area as possible, without interfering with game in progress. This way you can get on the field when the previous game ends.
- Ensure players are properly equipped (jewelry, Cleats, Shin-guards, etc).

Team talk:

- What system of play is being used?
- Who is playing where?
- Individual instructions (goals) for players.
  - Tactical goals
  - Technical goals
  - Individual jobs (set-piece takers, captains, marking, etc)
- Team goals and instructions.
- Any knowledge of opponents.
- What sort of result/performance is expected/required/wanted/needed?
**During the game:**

- Provide proper game time for all players.
- Have a Start stop-watch
- Take notes on what is working and what is not.
- Don't over-coach. Allow players to communicate on the field.

**Half-time:**

- Ensure players re-hydrate.
- Use notes for tactical comments.
- Have starting line-up written down and give to players before second half.
- Talk about player’s performance during the game and try not using the ref as a shield in the event that your team is losing. Teach your players social responsibilities even during games.

**After the game:**

- Handshakes for opposition and referees
- Cool down
- Team talk
  - Keep brief. Players’ emotions will still be high.
  - Ensure notes are complete. Can be used at next practice.

Try not using the ref as a shield in the event that your team is losing. Teach your players social responsibilities even during games For example, if the team scored and they are blaming the ref, re-direct the conversation by asking “How did the ball got there in our penalty box? Where were my midfielders during the transition from attackers to defenders? Who were the closest defenders to the ball before going into the net?
Technical Objective: 1) Dribbling Dodgin, 2) Dribbling, 3) Ball control, 4) Passing, 5) Shooting.

2). Players shoot with the same profile.  
3). Exercise the 2 profiles to pull. |
| 25' | 3). ACTIVITY 2-1V1 & 2V2: yellow player with ball dribbles between the orange cones, then makes a pass to the teammate, this returns the wall for the shot to the red goalie, red players work at the same time in opposite band, then the coach enters the ball creating 2v2. | ![Diagram](image3) | 1). The shots with instep medium to medium height.  
2). The wall can be after a control.  
3). The support player must anticipate the ball. |
| 25' | 1). ECONIMICAL GAME: the player who achieves the goal of half distance adds 3 points for his team. | ![Diagram](image4) | 1). Execute the shot with instep and counter balance arm, the support leg semi-selected. |
Ways of Playing

All teams will be encouraged to display an offensive style of play based on keeping possession and quick supporting movements off the ball. Emphasis will be placed on speed of play, avoidance of over-dribbling, and solid defensive organization.

Emphasis will be placed on speed of play, avoidance of over dribbling and quick organization during the transitional moments of a game.

Summary of Principles and Systems

Regardless of system or style of play, the principles will always remain the same. Successful soccer at all levels determined by one factor - ‘technique’. The execution of technique and tactics are highly correlated. Limited technical abilities of the players results in limited tactical opportunities

To enable this to happen we require that our coaches use the following formations.

Choosing your formation

- Select a system that suits your players based on their physical, tactical, technical and psychological qualities.
- A well balanced team can score, create and defend.
- Choose a balance of depth in the midfield and discipline in defence.
- The system is only as good as the players in it.

8v8

With fewer players more touches on the ball. Also means that players must perform offensive and defensive duties more regularly. Improving technique is the main aim of these age groups.

The 2 systems we want all of our teams to play in 8v8 are 1-3-3-1 or 1-2-3-2.

1-3-3-1

Organization

- 3 defenders evenly spaced across the back
- Central defender assumes responsibility of last defender
- 1 central midfielder, who when defending marks oncoming attackers and when attacking plays behind forward.
- 2 wide midfielders, who join the attack when going forward.
- 1 forward, who must play on side of the ball.
Pros

- Lots of cover at the back
- Wide Midfielders can get forward to support forward
- Natural transition to 1-4-4-2
- Allows the forward to play on one side and combine with the midfield.
- Allows for overlapping attacks from the fullbacks.

Cons

- Forward is often isolated at the younger ages as midfielders and defenders struggle to transition forward quickly

1-2-3-2

Organization

- 2 central defenders, one pressures, the other covers.
- 1 central midfielder, who marks oncoming attackers in the defense and plays as a holding midfielder when the team is attacking.
- 2 wide midfielders, who drop back to play in a back four when defending, but who push on as wingers when attacking.
- 2 forwards, who must play as a pair.

Pros

- Allows two forwards to support and play off each other
- Stresses importance of pressure/cover at the back
- Natural transition to a 1-3-4-3
- Emphasizes transition and the tactical awareness of this.

Cons

- Requires wingers to cover back a lot.
- Very demanding on the players
- Considerable demand of vision and communication required
- Good understanding of zonal defense is mandatory.
- Vulnerable at the back

11v11 (U12 onwards)

For the most part we would like our teams to use either 1-4-4-2 or 1-4-3-3. We have included 1-3-5-2 as an additional formation that can be used.
1-4-4-2

Pros

• Midfielders and defenders able to cover width of the field on both attack and defense.
• Players able to play in pairs all over field (LB with LM, CF with CF, etc)
• Easy for interplay between forwards.
• Back four covers width in best way and full-backs can push on still leaving coverage at the back.
• Forward always has close support.
• Can maneuvers between formations with ease.

Cons

• Slower to launch counter attack than other formations
• Less triangles to support teammates

Variations

• Diamond midfield (attacking and defensive central midfielder)
• Flat back four or sweeper stopper.
• Out and out wingers with two defensive midfielders
• One withdrawn forward

1-4-3-3

Pros

• Natural triangles across field make for good passing combinations
• Good balance in defense and attack with good spread of players.
• More attacking than 1-4-4-2 with 3 attackers
• Can easily maneuvers into a 1-4-4-2 or 1-4-5-1.
• Good counter attacking formation.

Cons

• Vulnerable in midfield.
• No wing (depending on how you set-up)
• Centre forward can become isolated when ball is switched to wide players.
• Can be outnumbered in midfield if those players play wide (better option to play with 2 of 3 forwards wide).

Variations

• Width can come from 2 wide forwards (out and out wingers), or wide midfielders
• One withdrawn forward, which makes it a 1-4-4-2
• Two wingers drop deeper, making it 1-4-5-1

3-5-2

Pros

• Transition to offence quickly
• Can control midfield with more ease
• 3 central defenders gives you good cover in the center.
• Works well if you have a defensive midfielder, who can cover middle when central defender is pulled wide.

Cons

• Can be exposed on wings in defense
• Very high work rate required from Wing players.
• If not performed well can leak goals easily.
• Need very specific players to play this formation.

Variations

• Sweeper behind 2 defenders.
• 3 central midfielders can be adjusted in many ways.
• Defensive midfielder dropping into central defense
• Centre backs defending wide areas, or pull wingers back
• Wingbacks, or out and out wingers? With wingbacks it is theoretically a 1-5-3-2.

Technical

• **Passing and receiving** — passing the ball on the ground at speed over different distances and receiving the ball with the purpose of keeping the ball moving.
• **Shooting and finishing** — ability to shoot effectively over a range of distances under pressure.
• **Ball manipulation and turning** — ability to keep close control off the ball away from pressure using various techniques.

Tactical

• **Playing out of the back** — ability to move the ball from the defensive third to the advanced thirds of the field with confidence.
• **Possession and transition** — ability to keep possession using minimal touches and quick movements off the ball creating passing opportunities to find the most efficient way of transferring the ball from one area of the field to another.
• **Transitional Moments** — ability to react quickly during the transitional moments in order to apply pressure when the ball is lost, and organize to obtain space when possession is regained.
Physical

- **Speed & Agility** – ability to react quickly to the ball, move efficiently with and without the ball, maneuver past opponents, get out of tight situations, and defensively adjust to attackers movements.
- **Endurance** – ability to endure the high intensity interval nature of the game, recover quickly, and keep work rate consistently high.
- **Strength & Power** – ability to maintain possession under physical pressure and be more competitive.

Psychosocial

- **Respect & discipline** – exhibit respect for teammates, coaches, officials, and opponents, and adopt roles within the team.
- **Cooperation** – exhibit collaboration over individuality in achieving team objectives and goals.
- **Competitiveness** – ability to work hard for the good of the team.
PLAYER DEVELOPMENT CONTINUUM MODEL (from NSCAA)

Player Development Continuum: Development occurs on a continuum where development is more important than the chronological age of the player. Developmental differences between players of the same age are common-place and can correlate to +/- 2 years of chronological age. Thus, in a mixed ability group of 10 year old players, it is feasible to have players performing at a level of an average 8 year old and an average 12 year old - a 4 year development range. In building relationships with youth, it is important to understand the development of the child. Not all children grow at the same pace, but they share many common characteristics of growth and development throughout their life.

Four stages of development:

1. Introductory / Ball Familiarity (6 to 8 years = Jr. SCORES)
2. Technical / Developmental / Ball Mastery (9 to 11 years = SCORES Select)
3. Tactical (12 to 14 years = Middle School)
4. Competition (15 + years)

Each stage of development identifies the aims and objectives that must be achieved in order for the player to move onto the next level. These aims and objectives are reached by being taught a number of various topics.

Within each age group coaches should understand that the following 4 components of the game should always be considered:

**The Four Components of Coaching Soccer are:**

- The Technical Component
- The Tactical Component
- The Psychological component
- The Physical Component

The technical component refers to the technique of skill performance. This is the "how to perform the skill" part of the game. The "mechanics" of skill performance.

For example:

- Where to place your non-kicking foot at the instant you strike a ball...
- Pointing your toe down and locking your ankle when striking a ball with your instep (laces)...

The tactical component refers to the "decision-making" part of the game. This is the "when, why, what and where" part of the game.

For example:

- If you have possession of the ball, should you dribble it, pass it to a teammate or shoot it...
If a ball has been served (passed) to you by a teammate, should you receive it, kick or pass it on your first touch or let it go...

The **psychological component** refers to the intangible part of the game such as:
Mental toughness, emotions, stress, attitude toward self and others...

The **physical component** refers to the fitness part of the game. The elements of fitness include:
Endurance, flexibility, agility, balance, speed, strength, power...

An understanding of these four components most certainly will help you to enjoy the game more and help you positively effect the development of your children.

Good training sessions are composed of activities that incorporate all four components. This is referred to as economical training. Activities that replicate the game itself are the best activities. After all, when our players face their opponents on game day, they play "the game"...they don't compete in "drills"!

In a game-like environment, players work on the technical part of the game (they dribble, pass, etc.), the tactical part of the game (they make many decisions), the physical part of the game (they run, stop, jump, change direction, etc.), and the psychological part of the game (satisfaction, disappointment, stress, fun...).

**Introductory – Ball Familiarity = Jr. SCORES (6-8 years)**

60-minute session – fun enjoyable and varied.

The introductory stage of development focuses primarily mastery of the ball and Dominating the 1v1. The main emphasis should be when “we” have the ball (offense). There will be little emphasis on coaching when “they” have the ball (defense) with the main goal being to get the ball back.

The main objective within the curriculum is to develop a passion for the games of soccer and individual soccer personalities.

---

**Expectations of Coaches in the U6-U8 Age Group**

- Emphasize having fun, but playing 100% while developing players who have respect toward the sport, teammates, coaches and opponents. Players will be encouraged to have “confidence” with the ball and to make things happen with skill - “not be afraid to make mistakes”.
- Sessions almost 90% focused on individual technique. The 10% of Strategy and tactics will be based on the individual and very basic in both “we” have the ball (offense) and “they” have the ball (defense).
- Teach psycho-motor skills and general coordination both with and without the ball and teach all necessary movements needed for technical skill development.
Coaching Session

A typical practice session should include the following:

1. Staff Set-Up: try to set up the field before your players get to the field. 5 min

2. Opening Circle & Warm-Up: check in with your players, introduce nutritional theme and soccer theme and lead your group into the warm up. 10 min

3. Activity 1: during this phase, players practice the skill with no opposition.

4. Activity 2: 1 V 1, 2 V 2: during this phase, players practice the skill in a 1 V 1 circumstances. This phase serves a thermometer for players for we get to see them in action against active defenders.

5. Economical Games: a modified scrimmage with a tactical variant for the first part of the game. Then is a free match.

6. Cool Down & Closing Circle: it is very important to review the content of the soccer/nutritional themes. Provide positive feedback to your players.

Make sure you are not going from one topic to another during the session. Please, follow the lesson plans in order and the progressions.

Arrive early to your session to set up before players arrive and make sure you are dressed appropriately. It is good practice to plan your sessions and having a session plan with you as a reminder can be helpful.

6- to 8-year-olds: Ages and stages of youth development

Understanding the different stages of youth development supports youth programming efforts as it encourages relationship building between youth and adult volunteers.

(Posted on January 4, 2013. Michigan State University Extension)
In building relationships with youth, it is important to understand the development of the child. Not all children grow at the same pace, but they share many common characteristics of growth and development throughout their life. This article introduces the topic and examines implications of working with youth ages 6 to 8 years old.

“Ages and Stages of Child and Youth Development: A guide for 4-H Leaders” provides the foundation of research needed to examine these common characteristics and implications for working with youth in various stages of their development. The five age groupings presented in the guide are 6- to 8-year-olds, 9- to 11-year-olds, 12- to 14-year-olds, 15- to 17- year-olds and 18- to 19-year-olds. Within each age groupings, growth and development is typically studied through four major areas of development: physical, social, emotional and intellectual.

Physical development refers to the growth of the body and development of motor skills. Social development is the interaction between children and their ability to function in social settings. Emotional development looks at how youth handle their feelings and express them. Finally, intellectual development is all about how individuals learn.

Early elementary youth (ages 6 to 8) are typically going through the following growth and development processes:

**Physical**

- They are mastering physical skills
- They have better control of large muscles than small muscles

**Social**

- They are learning how to be friends and may have several best friends at one time
- They are becoming more aware of peers and their opinions
- They are family oriented

**Emotional**

- They see fairness as being nice to others so others will be nice to them
- They seek parental/adult approval
- They tend to behave in ways to avoid punishment

**Intellectual**

- They base their thinking in reality and accuracy
- They are learning to sort things into categories
- They are beginning to develop sense of cause and effect

When working with children in the age range of 6 to 8, a volunteer, parent, educator or youth development expert must keep the following implications in mind:

**Physical**
• Their craft projects could end up messy
• Their activities need to be just that – active
• Plan activities that practice both small muscles and large ones
• Work on skills that can be completed successfully by beginners

Social

• Small group activities are best
• Break them into groups in order to encourage them to interact with different children
• They need a lot of praise as they are seeking adult approval
• They need to accept belief and values of parents

Emotional

• Focus on cooperative games in which every child wins
• Find ways to have more success than failures
• Be available to discuss fears and other issues important to them, no matter how small

Intellectual

• Reading to a child in this age group is effective and enjoyed
• Help them predict answers to their questions - successes
• Be flexible – provide a variety of activities
• Role playing and skits are often a popular way to learn and interact

Regardless of their age, all youth and adults have basic needs that programs should consider and provide opportunities to develop. All youth and adults need:

• To experience a positive self-concept
• To experience success in what they attempt to do
• To become increasingly independent
• To be accepted by people of different ages – peers as well as those in authority
• To give and receive affection

Technical/Developmental/Ball Mastery-SCORES Select (9-11 years)

90 minute session – To enable players to play both possession retention and creative attacking soccer, based upon the situation.

This age group is a very important age for technical training and learning the basic concepts of how to play the game. During this 3-year period players will remain on a small field with 8 players and while learning to win and loose are important challenges for players and coaches in the group, we should not loose sight of education and development over winning.
Having said that it is important that players and parents see the team develop and winning helps breed confidence and there are certain times when a coach may look to consider playing a stronger team rather than player rotation.

It is important that we not only encourage the technical side of the game but also without a strong work ethic and a willingness to compete for every ball, then technical ability counts for nothing. Therefore players should be encouraged to train as hard as they play, being tough and competitive at every opportunity.

By U11, players should be able to play multiple positions and have been given the chance to try different positions as well as continually encouraged to try moves and turns in games. We want players to be comfortable with the ball and confident in their ability when they make the transition to a bigger field.

In addition they should be able to keep possession of the ball, and play out of the back whenever possible. Be patient in the build up and look to play with width at all times. Create scoring opportunities while maintaining a good team shape to allow the ball to be won back quickly when lost.

In order to make this possible much time is spent at the early years on individual technical skill so that players are comfortable with the ball at their feet. This will include:

- Juggling
- Turns and moves
- Transitions
- 1 v 1 2 v 2 and 3 v 3

**Expectations of Coaches in the U9-U11 Age Group**

- Sessions need to be fun. We want players to enjoy the game so they want to continue playing soccer.
- Emphasis needs to be on individual technique. This should take up roughly 70% of coaching time with only about 30% being spent on the tactical side of the game
- Although results will be noted by players and parents as mentioned previously education and development should not be at the expense of a must win attitude
- As long as players are attending most if not all training sessions and working hard then they should receive on average at least 50% playtime during the season

**Coaching Session**

A typical practice session should include the following:

1. Staff Set-Up : try to set up the field before your players get to the field. 5 min
2. Opening Circle & Warm-Up: check in with your players, introduce nutritional theme and soccer theme and lead your group into the warm up. 10 min

3. Activity 1: during this phase, players practice the skill with no opposition.

4. Activity 2: 1 V 1, 2 V 2: during this phase, players practice the skill in a 1 V 1 circumstances. This phase serves a thermometer for players for we get to see them in action against active defenders.

5. Economical Games: a modified scrimmage with a tactical variant for the first part of the game. Then is a free match.

6. Cool Down & Closing Circle: it is very important to review the content of the soccer/nutritional themes. Provide positive feedback to your players.

Make sure you are not going from one topic to another during the session. Please, follow the lesson plans in order and the progressions.

Arrive early to your session to set up before players arrive and make sure you are dressed appropriately. It is good practice to plan your sessions and having a session plan with you as a reminder can be helpful.

9- to 11-year-olds: Ages and stages of youth development

*Posted on January 7, 2013, Michigan State University Extension*

**Understanding the different stages of youth development supports youth programming efforts as it encourages relationship building between youth and adult volunteers**

Understanding the youth development is a powerful tool in establishing relationships with youth. For a point of reference, physical development refers to the growth of the body and development of motor skills. Social development is the interaction between children and their ability to function in social settings. Emotional development looks at how youth handle their feelings and express them. Finally, intellectual development is all about how individuals learn.

As we move into the 9- to 11-year-old age bracket, youth’s physical development is starting to move to the forefront. They will experience growth spurts at different rates that moves them towards adolescence. Typically girls will begin to grow and mature faster than boys during this time period.

Providing active learning experiences is helpful during this time. Hands-on events or activities where they are up and moving – not limited only to sitting and listening – is best. Youth at this age are also developing a more competitive nature between boys and girls. Try to avoid activities that create competition between gender groups. Choose activities that mix boys and girls together in group on an even playing field.
Nine- to 11-year-olds are developing in the following ways, outlined below:

**Physical**

- They experience a steady increase in large muscle development, strength, balance and coordination
- They are very active, with a lot of energy
- There will be different maturation rates between the sexes; girls will tend to mature faster than boys
- They will experience an increase in small muscle coordination

**Social**

- They generally see adults as authority
- They follow rules out of respect for authority
- They are loyal to groups, clubs, gangs, etc.
- They enjoy code languages and passwords
- They identify with individuals of the same gender
- They prefer to work in groups in cooperative activities
- They approach solving problems with a negotiating style, compromising with peers

**Emotional**

- They are accepting parent/family beliefs
- They admire and imitate older youth
- They are developing decision-making skills
- They are beginning to question authority
- They need involvement with caring adult
- They find comparisons with others difficult to process

**Intellectual**

- Their academic abilities vary greatly
- They have an increased attention span, but many have interests which change rapidly
- They are learning to use good judgment
- They judge ideas in absolutes, right or wrong not much tolerance for middle ground
- They have interests in collections and hobbies

The implications of developing programs or interacting with 9- to 11-year-olds:

**Physical**

- Plan activities that allow them to move about
• Vary activities – don’t rely solely on sports, general physical activities are important as well
• Avoid competitions between genders

Social

• Clarify and enforce reasonable limits
• Plan plenty of time to be with individuals from their same gender
• Group activities are important

Emotional

• Provide correction quietly – one-on-one
• Give positive feedback and look for successes
• Avoid generalized praise
• Be present at group activities, be visible but be in the background
• Provide safety net of an adult that will maintain boundaries

Intellectual

• Youth in this age bracket still very much enjoy “hands-on” activities
• Help youth form groups/clubs with common interests or hobbies
• Vary the activities offered to engage rapidly changing interests
DEVELOPMENT CHARACTERISTICS TRANSLATED TO COACHING PLAYERS IN STAGE 4

Developing a team of players with large individual performance differences can create significant headaches for coaches. Pressure to prepare a team to compete against teams from different towns can often overshadow the needs of individual players. There is still a considerable amount for the players to learn as they are exposed to advanced techniques and team tactics. Players entering Stage 4 with competency in the basic skills are well placed to develop quickly. The hours spent developing individual mastery of the ball will pay dividends as the coach introduces activities where solid techniques are prerequisites for success.

TRANSLATED TO PLAYER DEVELOPMENT THIS MEANS

1. Provide players with a variety of experiences by coaching them how to play a number of positions.
2. Educate players on the physical, cognitive and emotional changes occurring.
3. Dynamic stretches prior to activity and static stretches following - flexibility naturally deteriorates so efforts must be made to regain range of motion.
4. Players should be given opportunity to play and train with others of similar ability.
5. Conditions for aerobic training are right – increasing aerobic capacity will allow players to perform high intensity (anaerobic) activities more frequently and recovery will be quicker.
6. As the nervous system becomes refined, performing correct technique is essential.
7. Continue to focus on individual ball mastery.
8. Tactical focus must be determined based on readiness of the individuals.
9. Players should be exposed to different positions and different roles.
10. Psychological training can be introduced such as coping strategies and mental imagery.
11. Bear in mind that early and late development has different implications for males and females.
12. Sessions should reinforce communication as an essential team skill.
13. Involve players in decision making and analysis of individual and team performance.
14. Create opportunities for team building.
15. Work with the players on attack and defensive strategies.
