It’s been quite a year so far. Like many businesses, organizations, and families, Humane Indiana has been impacted by the Covid-19 pandemic. Our 2020 major fundraising events were canceled or pivoted to virtual events, and we have really missed seeing you, our animal-loving community and supporters. Normal day-to-day processes have been modified at our Adoption Shelter, Estelle Marcus Clinic, Wildlife Center, and Resale Shoppe, per state guidelines for your safety and ours. However, because of the good that we do together, we did not skip a beat when it came to providing services to our community and being there for the animals.

WORKING THROUGH THE PANDEMIC SINCE MARCH
- We continue to provide care for homeless pets and help find them new families.
- Our Pet Food Pantry provides food for pet owners in need throughout our community.
- We still provide Crisis Fostering for families facing difficult life-changing situations.
- Our Estelle Marcus Clinic has provided nearly 1,400 spay/neuter surgeries.
- We maintain our work with local rescue organizations and the qualifying pet owners, to continue providing vaccinations and spaying/neutering services.
- We have admitted into our Wildlife Rehabilitation Center a record 2,800+ injured and orphaned wildlife in need. We continue to admit and care for wildlife 7 days a week.

AND THE WORK CONTINUES
Yes, we did ALL THAT throughout this spring and summer during the pandemic. Our work at Humane Indiana continues this fall and we will adjust our processes as necessary.

GIVE TO THE ANIMALS ON GIVING TUESDAY
We know times have changed and we are sensitive to the challenges that face us all as a community. Your compassion and commitment to our mission is proven in the animals we help and pet owners we support. On Tuesday, December 1st, Giving Tuesday, we ask that you continue to champion with us for homeless pets and injured and orphaned wildlife. Join us on Giving Tuesday in a global generosity movement to support organizations that transform our communities.

WHAT’S A COMMUNITY CAT?
A cat colony is feral, and sometimes stray, that typically live outdoors in groups. Most feral cat colonies originate from unneutered stray cats, which can often carry diseases. Our goal is to work with rescues to help spay/neuter to help reduce populations, and to vaccinate existing populations in an effort to keep them healthy.
THANK YOU!
