**Guiding Question:** How can I create a pollinator garden for native bees and butterflies that will provide the essential elements for a thriving, sustainable pollinator community?
Pollinator Garden Project

Guiding Question: How can I create a pollinator garden for native bees and butterflies that will provide the essential elements for a thriving, sustainable pollinator community?

Garden Checklist

☑ First decide whether you will design a shade garden or a sun garden. (ex. prairie or forest)
☑ You must have at least 6 different species of plants.
☑ Must provide both Host and Nectar plants.
☑ List the type of animal that will lay its eggs on the host plants.
☑ Make sure you have nectar plants blooming the entire season – April/May through October.
☑ You may want to use some low-growing ground covers; make sure you have a variety of sizes of plants.
☑ Each plant (not species) will need at least 0.5 sq. meters of space, maybe more. Determine the space needed for each plant.
☑ Extras/Option/possibilities: Mason bee homes; a source for puddling or basking; sights for observing; (your choice?)

Draw your garden.
Your garden must be at least 2m X 2m.
