

Timber Acoustic Barrier Walls

As our motorway network and other high traffic areas grow and connects it naturally cuts through more built-up residential areas. Acoustic barriers become an important part of the solution for coping with the noise pollution that heavy traffic produces. Hampden has extensive experience with many types of noise walls utilising timber paling, panels, acoustic plywood and heavy I-beams. We offer acoustic rated solutions as well as aesthetically pleasing designs that will stand the test of time.

Ideal Application

- Motorways
- State Highways
- Rail Lines

You will generally only need a building consent for fences over 2.5m. However you may still need a resource consent for some fences below this height. Contact local council to check the specific height restrictions and design requirements for your local area.

For more specifications and information please visit www.hampden.co.nz or call the Hampden team.
