

Guardrail Systems

Hampden guardrails are becoming a popular option for commercial, industrial and corporate premises wanting to provide boundary protection in high traffic areas such as inwards goods, carparks, entrance ways and median strips.

Steel guardrails are a superior option to the traditional use of timber. Steel is much stronger and takes up less space than timber alternatives and it will maintain its professional appearance for decades.

All guardrail systems are crash tested and compliant to NZTA standards.

Ideal Application

- Motorway Barriers
- Median Strips
- Vehicle Control
