

Automated Bollards

We offer a range of bollards to help manage vehicle access on or around your property. Models are available to suit low security applications, such as controlling traffic flow around a commercial site and preventing ram raids, right through to high security crash-tested bollards suitable for Hostile Vehicle Mitigation (HVM). Only the best-quality products are supplied and installed.

Three unique types of bollards are available, depending on the specific requirements of each product. These are offered in either high-quality stainless steel or powder-coated finish, and a range of heights and diameters to suit commercial, industrial or high security perimeter defence applications. We offer extensive New Zealand-based after-sales support, technical back-up and comprehensive warranty cover.

Crash Tested (HVM) Retractable Bollards

Automated Retractable Bollards are becoming an increasingly popular access control solution for a wide range of specialist commercial and industrial applications. Hampden is proud to exclusively offer European-made product to exacting EU standards using only the highest quality components to ensure exceptional performance and reliability.
