

Manual Swing Barrier Arms

Manual Swing Barrier Arms offer a cost-effective solution by providing a secure, lockable physical barrier that prevents unauthorised access and ensures controlled entry and exit. These barriers are ideal for low-traffic areas such as community facilities, sports grounds, schools, and other public spaces requiring economical, simple, and reliable vehicle access management.

Custom Fabricated Manual Barrier Arms

At Hampden, we offer a range of proven designs for large openings with varying security levels. We also specialise in bespoke designs. Our in-house design engineer will prepare detailed shop drawings tailored to your specifications for your review, approval, and subsequent fabrication and installation.

- **Pipe type arms:** Cost-effective and suitable for spanning very large entrances due to their lightweight design.
- **Heavier wall steel SHS arms:** Suitable for higher security sites.
- **Finishing option:** Available in galvanized, powder-coated, and custom paint colors.

Hampden's in-house teams are equipped to design, fabricate, and install custom swing barrier arms for a wide range of applications. Whether you require a lightweight or a heavy-duty option, or something absolutely bespoke to your site, Hampden can manage your requirements from start to finish.

Ideal Application

- Parks
- Sports Grounds
- Schools
- Car Parks
- Community Facilities
