Administering shots is a simple process. Keeping Veterans safe with on-time immunizations, up-to-date records, and accurate reporting, is where things can get complicated. Immunizations are critical to patient safety. They can make all the difference between saving a life, or putting countless others at risk.

Not all vaccinations are reported, and not all reported vaccinations were ever administered. The Immunization Dashboard streamlines and simplifies your immunization workflow. From the moment you log in, you’re connected to your state immunization registry. From there you can create accurate, up-to-date immunization schedules and records, putting you and your patients on the same page.

Know whose vaccines are current and whose are not. Know who’s due, who’s overdue, and who is playing catch-up. Everything is captured, scheduled, and reported automatically as you work. All on one screen.

**KEY FEATURES**
- An intuitive, user-friendly interface
- Automatically connects to every available state immunization registry with one login
- Internally-reconciled forecasting provides the most current patient information and scheduling
- Direct access to the Vaccine Adverse Event Reporting System (VAERS)
- Vaccine Information Statements are included, update automatically, and can be printed right from the app
- Catch-up schedules are created automatically in the event of a missed dosage
