

Stay on track and
on top of every order.

ORDER TRACKING MANAGER SUITE

KEEP ORDERS ON TRACK WITH ORDER TRACKING MANAGER SUITE (OTM SUITE)

Delayed or misplaced orders can jeopardize your bottom line, timely discharges and overall quality of care. Sorting through stacks of paper records, running complicated database queries, and scrolling through screens slows everything down, taking precious time and attention away from patient care. Cut through the clutter and work smarter together with OTM Suite.

This suite includes four unique modules:

EXPERIENCE THE OTM SUITE DIFFERENCE

A web-based, VistA-Integrated solution that leverages real-time data to provide clear oversight and task management for staff and administrators. Providing one specific location for this information, OTM Suite helps to avoid delays in patient care and additional work for administrative and medical staffs.

With OTM Suite you will know exactly what's happening with orders and where they stand in the process, optimizing workflow efficiency and saving time that can be diverted toward patient care.

LEVERAGE REAL-TIME DATA

OTM Suite is designed to meet the unique demands of different workflows. A customizable Today Screen shows a filtered Worklist of pending Orders. A Metrics Dashboard provides real numbers in real-time. All relevant data from the Worklist is presented in one easy-to-navigate screen, enabling users to drill down for an even closer look.

KEEP WORKFLOWS IN MOTION

Administrators can assign tasks to user roles, specific users, or clinic locations. OTM Suite tracks the progress of every task from start to finish. For recurring tasks, OTM Suite automatically reschedules by frequency, making things easier, and keeping everything and everyone on track.

Pharmacy Module

FEATURES AT A GLANCE

- One-click filtering options
- Highly visible STAT orders for immediate action
- Fast access to detailed, updated patient information
- The worklist is filtered into specific buckets of information for easy views of information. Information can be filtered for Inpatient and Outpatient:
