

Maintain consistent lower A1Cs. Achieve better Veteran outcomes.

Millions of Veterans live with chronic diseases.

Transforming VHA into an enterprise-wide High Reliability Organization begins with placing quality and safety at the core of care delivery for each Veteran. Diasyst achieves this by empowering care teams to more immediately and impactfully manage Veterans suffering from chronic diseases, from anywhere, in one place. For diabetic patients, clinicians and Veterans can track glucose and medications in real time. Workflows and clinical decision-making are simple and streamlined, and any changes are communicated virtually.

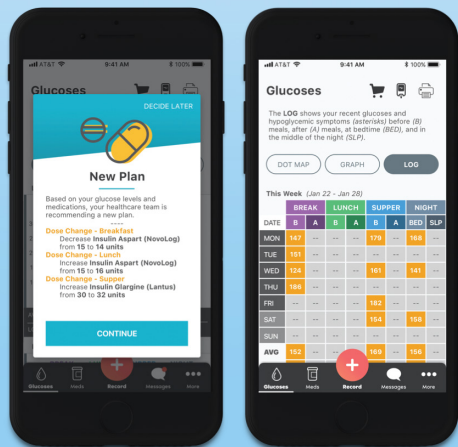

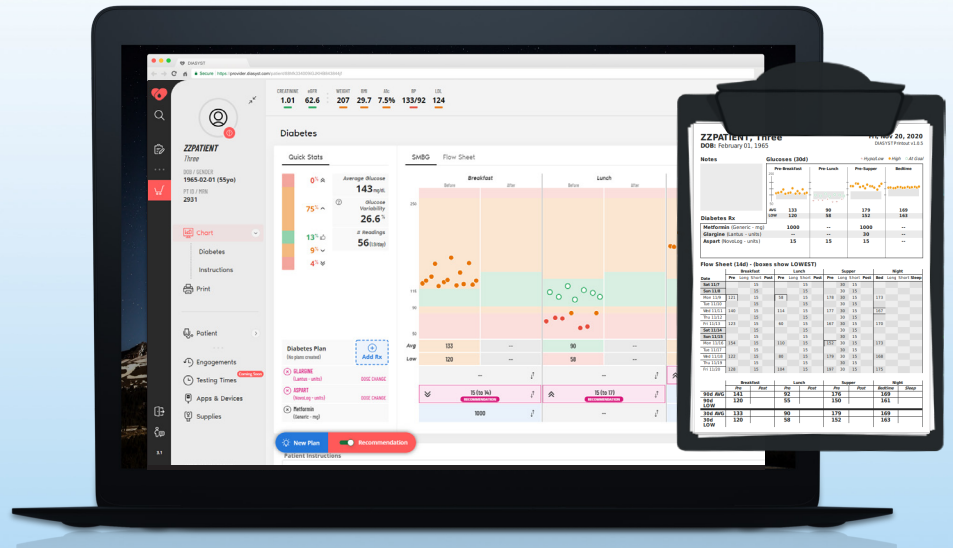

1

Patients easily track their glucose levels and medications, with or without a smartphone.

2

Care teams review patients in one place with pharmacotherapy recommendations for all diabetes medications on the market, online or offline.

EVERYTHING ON ONE SCREEN - OR ONE PAGE

3

Easily send treatment plans to patients and track their outcomes.

All relevant patient information is displayed, including labs, medications, and demographic information. Providers can also save notes summarizing treatment actions.

Increase access to care and Veteran safety.

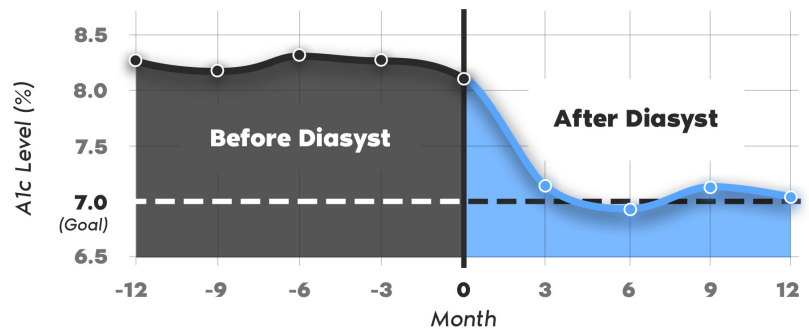

Diasyst empowers care teams to increase access to care for Veterans with remote patient monitoring. Regardless of location or social factors, Veterans using Diasyst receive round-the-clock specialty care and monitoring to manage and maintain healthy glucose levels. This reduces diabetes-related complications, and will ultimately reduce emergency visits, hospitalizations, and readmissions. In a post-COVID world, keeping high-risk Veterans out of the hospital is critical.

Reduce clinical inertia and optimize healthcare delivery.

With Diasyst, providers are given the insight and access necessary to keep diabetic patients healthy. Enhanced care coordination and population management empower providers to remain proactive, adjusting treatments before complications arise. In addition to optimizing the clinical workforce and increasing provider capacity, Diasyst helps to maximize the value of pharmacy and device spending, with significant cost savings.

Diasyst delivers results.
