

Protecting People & Buildings

Fire Detection & Alarm Systems, Extinguishing Systems
and Fire Solutions for the commercial world.

“Managing Fire Risk requires professional expertise.”

evolutionsecurity.com

Fire Prevention, Detection, and Containment Systems and Solutions for the commercial world.

Evolution – an established pedigree

For more than 20 years, Evolution has been working with UK, European and international clients to deliver solutions that protect people, buildings and critical assets, mitigate risk, and ensure strict adherence to appropriate legislation.

Full range of fire services

Our dedicated Fire Safety & Systems Division provides expert knowledge and advice, from initial consultation and design through to final installation and commissioning. We provide stand-alone systems through to fully integrated and networked solutions, depending on need. We also have a nationwide network of highly experienced service engineers to maintain and support both our own and third-party systems.

Extensive product expertise

Evolution's expertise spans all manner of fire technologies, from very early smoke detection systems that detect the early signs of a fire and trigger an alarm, to gas or water-based systems that suppress, extinguish or contain a fire long enough to give people time to escape. We also provide specialist Disabled Refuge solutions to protect the more vulnerable in our society.

We work with only the best and most reliable technology providers, who are in turn experts in their field, to bring our clients the latest thinking and expertise and the knowledge that our systems will perform when you need them most.

Specialist applications

As well as working to protect general commercial and industrial sites of all sizes, Evolution also provides solutions to more specialist environments, such as IT Equipment stores, server rooms, data centres and other business critical areas, providing specialist fire suppression technologies.

Our close partnership with our sister security systems business also means that we are capable of delivering turnkey integrated fire and security solutions when required.

High-level customer support

Evolution is more than just an installer. We have a dedicated network of highly qualified service engineers to provide planned maintenance and 24/7 emergency support. Our people are all trained to the highest level with the appropriate qualifications to work across multiple sites, including even the most hazardous environments.

Professional accreditations

Our business is accredited to ISO 9001:2008, BAFE and NSI Gold, giving you the confidence that you are dealing with a reputable firm with a proven track record, audited by independent industry professionals.
