Fruit Care Calendar (Adapted from https://nwfruit.org/fruit-tree-care-calendar/)

Jan	apply control for peach leaf curl apply three (3) times 3 weeks apart starting in early January until <u>bud</u> <u>break</u>	plant <u>bare root</u> trees, vines, <u>graft</u> <u>scionwood</u>	<u>apply</u> <u>fertilizer</u> <u>&</u> <u>lime</u>	Collect scion wood while fully dormant	Anthracnose Control
Feb	protect peach, apricot, nectarine blossoms from frost	Prune Grape Vines UC Pruning Videos <u>Cane Spur</u>	inne	dormant season <u>pruning</u> <u>& Video</u>	<u>Mason Bee</u> Release
March	Prune/fertilize blueberries	<u>Fertilize</u> raspberries/blackberries	delayed dormant control (Buds begin to swell but		<u>Stone Fruit</u> Control <u>brown rot &</u> <u>shothole</u>
April	repair trellis support systems <u>Fruit trees</u> <u>Grapes</u>	check <u>for tent caterpillars,</u> <u>leaf rollers</u> , use BT	before green tips start to show.)		
May	Codling Moth Control Organic pest management	If necessary, <u>fertilize</u> <u>when trees finish</u> <u>blooming</u> <u>Check/install</u>	<u>aphids, scale,</u> <u>mites</u>	<u>apply sticky</u> <u>trap ant barrier</u> (see "Ant Management	Fruit Thinning (video) <u>apple-pear</u> <u>peaches-</u>
		check soil moisture at 6	<u>scab and</u> <u>mildew</u> <u>control</u> (apple, pear)		<u>Fertilize</u> <u>blueberries</u> & raspberries
	not abamica, atraubamica	inches deep. irrigate if needed			Fruit Thinning apple-pear
	net cherries, <u>strawberries,</u> and <u>blueberries</u>	Reduce irrigation if tree is growing vigorously (>16- 18 inches new growth)			Fertilize
June	Late June: Set out <u>apple maggot</u> traps	Remove fruit infected with disease or insects		train young trees	<u>blueberries</u> <u>& raspberries</u>
	Codling Moth Control	immediately.		stake, use spreaders	
July	Organic pest management		monitor	cut suckers	
August	Cut back June-bearing strawberries after harvest, fertilize		apple maggot control	remove <u>laterals</u> on stone fruit	Grape Spray <u>mildew</u> <u>botrytis</u>
Sept.	finish bark grafting trees		summer pruning	support fruited branches	extract <u>mason</u> <u>bee</u> cocoons
Oct.			prepare ground for	avoid late pruning	Sanitation- cleanup diseased/
Nov.			<u>spring</u> <u>planting</u>		dropped fruit & leaves
Dec.	begin transplanting nursery trees	collect scionwood		begin dormant pruning	Monitor <u>anthracnose</u> and begin control after harvest
