

Site setup and information boards

- An overall site plan showing site layouts, access routes for vehicles and pedestrians and escape routes. Designers can help contractors to provide this plan.
- Samples of required PPE to demonstrate standards expected of all visitors.
- Is information on key project hazards and controls in place and clearly visible?

- Only relevant posters and SHE information arranged in a coherent way.
- A spare fire alarm call point available to demonstrate the sound of the alarm.
- Photographs of project team, identifying their key roles – could include the design team members.
