1. Introduction

Liquidnet Asia Limited (“Liquidnet Asia”) operates the alternative liquidity pool (the “Liquidnet Asia System”) for matching of buy and sell indications and orders for equity securities listed in the following Asian markets:

<table>

Liquidnet Asia is licensed by the Hong Kong Securities and Futures Commission for carrying out Type 1 (dealing in securities) and Type 7 (providing automated trading services) activities. Liquidnet Asia is also registered with the Monetary Authority of Singapore as a Recognised Market Operator. Liquidnet Asia is not otherwise licensed by or registered with any other regulator.
2. User Criteria

Users access the Liquidnet Asia System as a (i) Member; (ii) Trading Desk customer; or (iii) Liquidity Partner of Liquidnet Asia or its affiliates. A Member, Trading desk customer or Liquidity Partner of Liquidnet Asia (together referred to as “customers”) must be located or have traders located in Asia (subject to local rules and requirements).

All users that may access the Liquidnet Asia System, wherever located, must be qualified investors as defined in the SFC Code of Conduct. All Liquidity Providers must in addition confirm that any orders they transmit to the Liquidnet Asia System are from qualified investors only and that the Liquidity Partner has adequate processes in place to ensure all such orders passed to the Liquidity Partner are from qualified investors only. All users based in Singapore must be professional investors, accredited investors or institutional investors and only provide access to the Liquidnet Asia System on behalf of professional investors, accredited investment and institutional investors. In addition, a user must meet the following requirements:

(i) Member

A “Member” of Liquidnet Asia must be a buy-side institutional investor with total equity assets or total equity assets under management of US $100 million or more\(^1\) or an agency-only securities dealer that is a nationally recognized transition manager and acts as a fiduciary in its transition management business\(^2\). A buy-side firm can nominate an outsourced dealing service provider for buy-side firms to transmit its indications and orders to Liquidnet Asia and manage those indications and orders through the Liquidnet desktop application. The outsourced dealing service provider must identify the buy-side firm on each indication and order sent and the buy-side firm must settle directly with Liquidnet Asia. In addition, the provider must meet other conditions as notified to the provider in writing. A Member must have an order management system (“OMS”) with which Liquidnet Asia can interface. Once the OMS has been integrated, a Member can gain access to the Liquidnet Asia System by transmitting “indications” from their OMS and manage those indications through the Liquidnet desktop application, which is installed at one or more trader desktops at the Member firm. An indication is a non-binding instruction relating to a specific securities symbol. Indications can be transmitted through a periodic sweep, FIX transmission or another method agreed among Liquidnet, the Member and the OMS vendor, as applicable. Liquidnet Asia does not ‘hold’ indications and Members may place orders represented by the indications to other brokers prior to execution in the Liquidnet Asia System.

---

1. The $100 million requirement applies to Members of other Liquidnet affiliates, except for EMEA Members, where the amount is US $200 million.
2. Transition managers who are classified as a Member are permitted access to the Liquidnet desktop application for all their order flow if the majority of their order flow is transition management order flow.
(ii) Trading Desk Customers

A “Trading desk customer” of Liquidnet Asia must be an institutional client or a securities dealer that is a transition manager. A Trading desk customer that is an institutional client can also access the Liquidnet Asia System by sending orders via a third party outsourced trading desk, in which case each order must identify the institutional client and the institutional client must settle directly with Liquidnet Asia. A Trading desk customer can gain access to the Liquidnet Asia System by placing firm instructions to the Liquidnet trading desk via telephone, email or other electronic means, including via FIX. As such customers will not have access to the Liquidnet desktop application, they cannot access the manual negotiation functionality (see below under “Trading in the Liquidnet Asia System”). Orders are cancelled at the end of the day unless specific instructions have been agreed with Liquidnet Asia.

A Member can also be a Trading desk customer when it places instructions to the Liquidnet trading desk instead of using the Liquidnet desktop application.

(iii) Liquidity Partners

Liquidity Partners are brokers and can access the Liquidnet Asia System by placing principal or agency orders (also referred to by Liquidnet as LP resting orders) to Liquidnet via telephone, email or other electronic means, including via FIX. As Liquidity Partners will not have access to the Liquidnet desktop application, they cannot access the manual negotiation function. Members and Trading desk customers can only interact with LP resting orders when they affirmatively create a Liquidnet algo or Liquidnet only strategy or, in the case of a Member, affirmatively respond to a Broker Block Opportunity (see below under “Accessing and Trading on the Liquidnet Asia System”).

Liquidity Partners cannot make elections pursuant to Liquidnet Transparency Controls (see below under “Use and disclosure of trading information”). Orders are cancelled at the end of the day unless specific instructions have been agreed with Liquidnet Asia.

3. User Restrictions

Each user must comply with all legal and regulatory requirements applicable to the user in connection with its use of Liquidnet Asia’s services, including the following:

• A user must not knowingly prearrange a specific trade with an affiliated customer through the Liquidnet Asia System in violation of applicable law.
• A user must not short sell Hong Kong, Indian, Indonesian, Korean, Malaysian, Pakistani, Philippines, Taiwanese and Thai equities in the Liquidnet Asia System.
- Where short sell is permitted, a user must comply with applicable regulatory requirements
- A user must not engage in any activity that constitutes market manipulation
- A user must not engage in any form of market abuse.
- A user should not trade stock that is on a user’s internal restricted list.
- A user must not commit any act or engage in any course of conduct which is likely to interfere with the operations of a fair and orderly market.

Users must not disseminate outside Liquidnet Asia any information about Liquidnet indications and negotiations.

Members are also expected to adhere to the behaviors set down in the Member protocols when interacting with other users through the Liquidnet desktop application. The Member protocols and details of Liquidnet Australia’s complaints handling procedures are available in the Member’s section of the Liquidnet website.

Liquidity Partners are also expected to adhere to the following guidelines for LP resting orders:

- Maintain average order resting time of one minute or more
- Accurately represent its participation in the Liquidnet Asia System in any disclosures it makes to its customers or other third-parties.

Liquidnet Asia may suspend a user’s access to Liquidnet Asia’s services or terminate its relationship with any user who violates any legal or regulatory requirement. In addition, Liquidnet Asia can suspend a user’s participation in Liquidnet Asia in accordance with Liquidnet Asia’s risk management processes, based on credit concerns, regulatory compliance, system and technical issues, non-compliance with usage protocols as made available from time to time, and other factors that Liquidnet determines appropriate, subject to Liquidnet Asia acting in a non-discriminatory manner.

4. Trading and Operational Matters

(i) Routing to other venues

The Liquidnet Asia System only matches indications and orders within the Liquidnet Asia System and does not route orders to any other execution venue. However, customers can give specific instructions for Liquidnet Asia to route firm orders for execution solely in other execution venues or to execute both in the Liquidnet Asia System as well as in other execution venues, including standing or order-by-order instructions and instructions to automatically send an order after executing in the Liquidnet Asia System. Liquidnet refers to the latter as surge capture orders.
(ii) Accessing and Trading on the Liquidnet Asia System

For Members, indications and orders are transacted within the Liquidnet Asia System by accessing the manual negotiation functionality or the auto-negotiation functionality or by responding to a Broker Block Opportunity. For Trading desk customers, orders are transacted within the Liquidnet Asia System by accessing the auto-negotiation functionality. Liquidity Partners can also give notification of a Broker Block Opportunity to Members when accessing the auto-negotiation functionality. Liquidity Partners are subject to limitations on how their orders can interact with Members and Trading desk customers as set out in this section. When neither side of a match uses the manual negotiation functionality, orders are automatically transacted. Liquidnet refers to such orders and transactions as H2O orders and H2O transactions.

(a) Manual negotiation functionality

The manual negotiation functionality is only available through the Liquidnet desktop application and hence only available to Members. All Asian equities can be accessed using the manual negotiation functionality. Members can elect not to participate in the negotiation functionality by instructing Liquidnet Asia not to transmit the Member’s indications to Liquidnet’s indication matching engine. Members using the manual negotiation functionality cannot match directly with orders from Liquidity Partners but can elect to receive notice of Broker Block Opportunity (see below under “Broker Block Opportunity”).

A trader at a Member firm can choose whether to make an indication active, passive or outside through the Liquidnet desktop application. An indication that is set outside or has a price limit outside the reference price or that is below the minimum quantity set by Liquidnet Asia is ineligible for matching in the Liquidnet Asia System.

A trader that has set an indication to passive or active will be matched if there is a matching indication that is within the ‘tolerance’ and limit price set by the trader. The tolerance is the minimum percentage of the Member’s working quantity based on number of shares and/or percentage of average daily trading volume (based on 30 prior trading days) and is intended to protect a user from negotiating with an opposite side (the “contra”) whose working quantity is too small.

Liquidnet negotiations are anonymous one-to-one negotiations. A trader will know that the contra has a tolerance meeting his or her minimum but will not otherwise know the quantity of shares the contra can trade.
A trader that has a match may either send an invitation to negotiate or set the indication to active (if passive) to indicate he is ready to receive an invitation to negotiate. The trader can only send an invitation on a match to one contra at a time. The invitation must specify a price and negotiation quantity and is firm. The contra can respond by accepting the proposal or invitation or decline to negotiate. If the contra accepts the invite and opens the negotiation room, he can respond by accepting the proposal, changing the quantity (above the set tolerance) and accepting, submitting a counter-offer (except for mid-peg invitations), allow the proposal to expire by not responding within the configured time or end the negotiation.

After the first invitation, subsequent bids and offers may be submitted as counter-bids or counter-offers in the negotiation and the proposal can be cancelled before a transaction takes place. Traders can also send messages to each other during negotiation using the chat function on the Liquidnet desktop application.

There are two types of negotiation proposals: priced and mid-peg. A priced proposal has an associated price displayed to the contra and can only be transacted at the indicated price. A mid-peg proposal does not have an associated price. A mid-peg proposal, if accepted, is transacted at the mid-price at the time the proposal is accepted.

Prior to starting a negotiation, submitting a proposal, or taking any other action in a negotiation, a trader should confirm that the price and quantity and other information relating to that action accurately reflect the trader’s and the Member’s intended action. In particular, the trader should confirm that the proposal price is within any limit price set by the Member and within any price and quantity limits set in the Member’s OMS. Traders should be aware that Liquidnet Asia does not update available quantity or working quantity for changes in OMS order quantity once a negotiation has commenced.

Members can choose from various default and configuration settings relating to matches and negotiations in the Liquidnet Asia System, including in relation to:

- Price alerts for indications set outside
- The reference price for indications with limit price
- Minimum and maximum tolerance settings
- Default to passive or active
- Automatic convert indications from active to passive
Mid-peg price constraints

These settings are initially discussed and agreed with the Member as part of the process for integrating the Member’s OMS to the Liquidnet Asia System. Further information on default and configuration settings relating to Member integration and the Liquidnet desktop application, including list management of indications, are set out in the Liquidnet Trading Rules. Members should contact their Relationship Manager for full details of configuration and default settings.

(b) Auto-negotiation functionality

The auto-negotiation functionality is available to Members and Trading desk customers for all Asian equities. The auto-negotiation functionality is available to Liquidity Partners for all markets except India, Korea and Taiwan. Members can access this functionality by selecting a Liquidnet only strategy, or a Liquidnet trading algorithm from the Liquidnet desktop application. A Member using the Liquidnet desktop application also has the option to use the auto-negotiation functionality when he has a match on his indication instead of manually negotiating with the contra.

Trading desk customers and Liquidity Partners can access the auto-negotiation function by submitting orders to the Liquidnet trading desk by telephone, email, FIX or other electronic means (including via their OMS). A Trading desk customer or Liquidity Partner can set up a FIX connection to access a Liquidnet only strategy or a Liquidnet trading algorithm directly from their OMS. Otherwise, orders submitted to the Liquidnet trading desk are routed manually by Liquidnet trading desk personnel to the Liquidnet Asia System and/or external venues in accordance with the customer’s instructions.

A Liquidnet only strategy sends an order to the Liquidnet Asia System based on the stated quantity, and if specified by the user, limit price and minimum quantity. Commencing on or after 1 March 2019, a user can choose a Liquidnet only strategy to only send orders to interact with other orders using the auto-negotiation functionality. Such orders will not match with a manual contra.

A Liquidnet trading algorithm that can interact with the Liquidnet Asia system does so by sending a conditional order to the Liquidnet Asia System while simultaneously sending firms orders to external venues in accordance with

---

2 Liquidnet only strategies route firm or conditional orders only to the Liquidnet Asia System and do not utilize traditional algorithm functionalities, but are sometimes referred to as trading algorithms because they can be created by Members and Trading desk customers through the Liquidnet desktop application or an OMS or FIX connection in the same way as traditional algorithms.
the design and parameters for that trading algorithm. Users can specify the quantity, limit price, minimum quantity and such other parameters as applicable for the trading algorithm. Orders in external venues will be cancelled before a conditional order in the Liquidnet Asia System is executed.

Subject to limitations on LP resting orders, an order accessing the auto-negotiation functionality will be eligible for matching in the Liquidnet Asia System if the limit price (where specified) is at or within the current bid and ask price. If there is a match with a manual contra, the Liquidnet software, known as the Liquidnet negotiation contra or ‘LNC’, will negotiate the order on behalf of the user based on the limit price and minimum quantity specified by the trader. Upon the match, the LNC will send an invitation to negotiate (if the manual contra is active) or accept an invitation from the manual contra. A Trading desk customer can elect not to interact with a manual contra. The LNC can only send a mid-peg proposal and can only accept a mid-peg proposal or an explicit price at the mid-price (or better). Where both sides of a matched indication is auto-negotiated, the match is automatically transacted at the mid-price.

A LP resting order is only eligible for matching and executing in the Liquidnet Asia System against an order from a contra using a Liquidnet only strategy or a Liquidnet trading algorithm. In the case of a Member or Trading desk customer contra using a Liquidnet only strategy, a LP resting order will only execute with the contra order if the contra has elected through Liquidnet Transparency Controls to interact with orders from Liquidity Partners.

(c) Broker Block opportunity

A Member with an opposite-side indication to a LP resting order can receive notification of the LP resting order as a Broker Block Opportunity. Notification is only provided to a Member when the mid-price is at or within any limit price specified by the Liquidity Partner. If a notification is provided and the mid-price subsequently moves outside the limit price, this is indicated in the notification to the Member.

Upon receipt of notification of a Broker Block Opportunity, a Member can create a broker block accept. A broker block accept cannot be canceled by the Member during a set time-in-force period determined by Liquidnet. The broker block accept will not execute against the Broker Block Opportunity if the Liquidity Partner order has been previously canceled or executed in full.

4 Liquidnet Asia also provides algorithms that can route to Liquidnet affiliates for accessing crossing systems operated by those affiliates
Execution of a broker block accept is for the lesser of the quantity of the Member’s broker block accept and the Liquidity Partner order, subject to meeting the tolerance of the Member’s indication and the minimum execution size for the applicable region.

Members elect through Liquidnet Transparency Controls whether to receive notice of Broker Block Opportunities.

(d) Targeted Invitation functionality
There are two types of targeted invitations: (1) manual invitations and (2) targeted invitations from algos. The targeted invitation functionality complements the Liquidnet Asia System but does not change the way that indications and orders are matched and executed in the system. This functionality allows users to anonymously send an invitation to qualifying Members who have recent activity in a relevant stock with the intention that recipients make available an opposite-side order for matching on the Liquidnet Asia System. A targeted invitation has a notification component and represents a firm order in the Liquidnet Asia System and any matches are negotiated and executed using the auto-negotiation functionality. The targeted functionality is available for all Asian equities.

The sender of a targeted invitation receives certain information regarding the actions of the recipients, as described in Schedule B to this notice.

Targeted invitations from algos are an optional parameter or configuration associated with the auto-negotiation functionality.

Only Qualifying Members, as described in Schedule B, can receive targeted invitations. All Members and customers can send manual targeted invitations and targeted invitations from algos. Members that are not Qualifying Members, as well as Trading desk customers, cannot receive targeted invitations.

Details of the targeted invitation functionality are set out in Schedule B to this document.

4.1. Source of Liquidity

There are two categories of liquidity in the Liquidnet Asia System, being (i) indications and orders from Members and Trading desk customers of Liquidnet Asia or its affiliates; and (ii) LP resting orders from Liquidity Partners of Liquidnet Asia or its affiliates. All liquidity within the same category share the same priority. The Liquidnet group does not engage in proprietary trading and there are no proprietary orders in the Liquidnet Asia System.

4.2. Priority

Where a limit price is specified for an indication or order, the price must be at or within the current bid and ask to be eligible for matching in the Liquidnet Asia System.

(a) Prioritization of categories and functionalities

Where there are multiple same-side eligible indications or orders for the same security, priority will depend on whether the indication or order uses the manual negotiation function or the auto-negotiation function or is a Broker Block Opportunity.

(i) Auto-negotiation. An order transmitted to the Liquidnet Asia system using the auto-negotiation function (the transmitted order) will execute first against an eligible contra-side order using the auto-negotiation function before matching with a manual contra, following the below priority:

1. An order from a Member or Trading desk customer that is resting in the Liquidnet Asia system as of the time of receipt of the transmitted order

2. A LP resting order that is resting in the Liquidnet Asia system as of the time of receipt of the transmitted order

(ii) Manual negotiation. An indication eligible for matching in the Liquidnet Asia system will match against all eligible contra-side indications and orders. Liquidnet lists active contras based on time priority (when the contra went active first), except that a LNC order (representing one or more auto-negotiated orders) will be listed above other contras. An invitation will by default be sent to the contra that is listed first, but in the case of a manual negotiation using the negotiation room, the trader can override the default and

5 In cases of error or accommodation, Liquidnet Asia may act as principal for settlement purposes.
select to which contra to send the invitation. These general priority rules for manual negotiation are subject to the following exceptions:

1. **Exception where sender cannot execute against a contra.**
   Where a trader submits a negotiation proposal from a match pop-up, if the Liquidnet Asia System determines that a higher priority contra is unable to execute against the sender due to the contra’s price or size constraint, then the Liquidnet Trading System can send the invitation to a lower priority contra, to avoid sending an invitation to a recipient who cannot execute against the invitation.

2. **Exception where previous invitation missed or declined by trader.** If a trader’s mid-peg invitation is above a contra’s tolerance and missed or declined by the contra (or expires), (i) that trader takes priority if the contra subsequently sends a proposal within 30 seconds after the contra missed or declined the invitation, and (ii) a trader at another Member firm cannot submit a proposal to the contra during that 30-second period. The 30-second period is reduced to 10 seconds when the contra declined the invitation from the trader and specified the reason as “Explicit Price Only.”

   (iii) **Broker Block Opportunity.** A Broker Block Opportunity will only be notified to a Member with an opposite side indication when the Member’s indication is not matched with any contra-side indication or order.

   (b) **Multiple same-side orders within the same prioritization category**

   Except for India equities, the following applies where there are multiple same-side orders for the same security within the same prioritization category and the Liquidnet Asia system then receives a contra-order:

   (i) Where two or more orders on the same-side from Members and Trading desk customers are automatically negotiated, Liquidnet will aggregate the orders and execute the two (or more) same sided orders equally (for each order, up to its quantity and subject to any specified minimum quantity).

   (ii) Where there are two or more LP resting orders, Liquidnet will aggregate the LP resting orders and execute the two (or more)
same sided orders equally (for each order, up to its quantity and subject to any specified minimum quantity).

(iii) A notification of a Broker Block Opportunity can represent more than one Liquidity Partner. If a Member submits a broker block accept, the order can execute against any opposite side auto-negotiation order, subject to the priority rules set out in this section.

For Indian equities, for each of the above three scenarios, executions of the same-side orders within the same prioritization category are based on time priority.

4.3. Executions in the Liquidnet Asia System

Matched buy and sell orders transacted in the Liquidnet Asia System are executed as follows:

- For Indonesian, Korean, Malaysian, Pakistani, Philippine, Singaporean, Taiwanese and Thai equities, Liquidnet Asia transmits the matched buy and sell orders to a local broker for execution and execution is subject to the rules and requirements of the local exchange or other venue on which the local broker executes the trade.

- For Indian equities, Liquidnet Asia routes the matched buy and sell orders to its local broker in India who sends the orders as a buy limit order and a sell limit order to the electronic limit order book of a local exchange for execution. Where there are existing orders on the electronic limit order book of the local exchange, with higher price or time priority than the matched orders submitted by Liquidnet Asia’s local broker, one side of the matched orders will execute in whole or in part against the open orders on the exchange, and the other side of the matched orders will be returned partially executed or wholly unfilled. The amount of unfilled order will depend on the volume of higher priority orders on the exchange electronic limit order book at the times the orders are submitted by Liquidnet Asia’s local broker for execution.

- For Hong Kong equities, Liquidnet Asia executes the matched buy and sell orders in the Liquidnet Asia System and reports the trade to HKEX in accordance with the rules and requirements of HKEX.

4.4. Execution Pricing

Except for Indian equities, the executed price of a transaction conducted in the Liquidnet Asia System is the negotiated price for a transaction as conducted by Members if both sides are using the manual negotiation functionality and at the mid-
price if both sides are using the auto-negotiated functionality. Where only one side is using the auto-negotiated functionality, the LNC can only accept a proposal at the mid-price (or better). In all cases, the execution price is subject to price restrictions under local rules and regulations.

For Broker Block Opportunities, the execution price of a broker block accept is the mid-price at the time of transaction except that the price cannot be worse for the Member than the mid-price as of the time the Member submits the broker block accept.

For Indian equities, the executed price of a transaction negotiated in the Liquidnet Asia System is the price of each trade as executed on the local exchange, which will either be the price as transacted in the Liquidnet Asia System or an improved price.

A Member will be alerted by a message in the Liquidnet desktop application if the transacted price is more than 2% away from the current market price (where available) and the trader at the Member firm will need to confirm to proceed.

4.5. Restriction on trading certain stocks

The following equities are restricted from trading on the Liquidnet Asia System: Korean stocks that are subject to foreign investor restrictions; Thai stocks other than Foreign Shares and Non-Voting Deliverable Receipts; Indian stocks that are on the red flag or breach list or listed as illiquid securities by, or in the “Trade for Trade Segment” of, BSE or NSE; Singapore stocks that have traded 10% or more of market volume in the Liquidnet Asia System during two of the preceding six calendar months; and Taiwanese stocks that are subject to pre-delivery and pre-funding requirements or where stock or fund checks are required, Conversion type stocks, Disposal type stocks and Taiwanese REITS, ETFs and PRFs. Other stocks may be restricted from time to time based on restrictions imposed by our local execution or trade reporting brokers.

4.6. Order Cancellation

Once orders are executed in the Liquidnet Asia System, they cannot be canceled unless the execution was erroneous or both parties to the trade agree to the cancellation, in all cases subject to local rules and regulations. If cancellation is not possible, Liquidnet Asia may accommodate the trade in accordance with its accommodation policy. Any decision to accommodate a trade is at the sole discretion of Liquidnet Asia.
4.7. Commissions

Liquidnet Asia’s agency commission structure is based on the type of product/function used by the customer and some products/functions may involve higher fees for executions conducted in the Liquidnet Asia System.

4.10 Activities Reports

Upon a customer request, Liquidnet Asia can provide various transaction analysis and match reports concerning the customer’s matches and executions that take place in the Liquidnet Asia System.

4.11 Other trading and operational matters

See Schedule A for details of other operational matters.

5. Risks disclosures and internal control procedures

5.1. Indications are non-binding; indications and orders may not find matches in the Liquidnet Asia System

Indications in equities from Members are non-binding and matching with a contra using the manual negotiation functionality may not result in an execution. Liquidnet Asia monitors for system usage and monitors for patterns of conduct by customers that could cause frustration for other users or may amount to abusive trading behavior. Liquidnet Asia Sales personnel also monitor matches in the Liquidnet Asia System in real-time to facilitate negotiations, monitor matching activities and respond to issues. Liquidnet trading desk personnel monitor trading conducted by users of Liquidnet only strategies and Liquidnet trading algorithms.

5.2. System outages

Technical or other issues may from time to time impact the Liquidnet Asia System such that it is unable to correctly receive indications from our Members’ OMS or match indications and orders that have been received or otherwise interrupt fair and orderly trading in the Liquidnet Asia System. Where such system issues materially affect the efficiency or proper functioning of the Liquidnet Asia System, Liquidnet Asia will halt matching on the Liquidnet Asia System for the affected equities or take such other measures as considered reasonable in the circumstances. In any such case, if Liquidnet Asia is not able to resolve the system issue within a reasonable time, Liquidnet Asia will notify affected customers of the system issue and reject firm orders. Liquidnet will notify affected customers when the system issue is resolved.
and trading on the Liquidnet Asia System is available. Indications are non-binding and Members retain the ability to trade their orders with other brokers.

5.3. Use and disclosure of trading information

Liquidnet Asia has controls in place to prevent the misuse of trading information by the Liquidnet group and its personnel and to manage conflict of interest in relation to trading information. Members and Trading desk customers can also make elections on the disclosure of their execution data using a web-based system known as Liquidnet Transparency Control. Members and Trading desk customers can use the tool to make elections relating to products and services that are complementary to Liquidnet’s core offering. Further details on the use and disclosure of trading information are set out in the Liquidnet Order Handling Q and A Document, which is available in the Member’s section of the Liquidnet website.

5.4. Use of market data

Market data is provided to Liquidnet by Thompson Reuters, which sources the market data from the primary exchange (NSE only for dual-listed Indian equities). Liquidnet provides market data on highest bid and lowest ask and last sale in the Liquidnet desktop application. Market data is provided to traders at Member firms to assist with the negotiation process. Liquidnet Asia allows traders to use this market data by clicking on the bid, mid, ask or last market price or the last submitted proposal. A user can manually change this actual value price prior to submitting a proposal.

Members should have an independent source of market data at the time a proposal or order is transmitted or modified to verify or validate market data provided through the Liquidnet trading application.

5.5. Settlement and Counterparty

Trades are settled in accordance with normal exchange procedures and settlement calendar as applicable for the local market. Failures will follow the applicable rules of the local market. Settlement is between a Liquidnet account at BNP Paribas Securities Services and the account(s) designated by the customer, except as follows:

- Settlement of Indian equities is between Morgan Stanley India Company Private Ltd and the account(s) designated by the customer
- Settlement of Korean equities is between Morgan Stanley & Co, International plc, Seoul Branch and the account(s) designated by the customer
- Settlement of Taiwanese equities is between Morgan Stanley Taiwan Limited and the account(s) designated by the customer

Relationship Managers in the US and EMEA Sales departments are able to access trading information relating to customers based in the localities they cover.

The counterparts of those persons listed above, and who are located in the US and EMEA departments corresponding to the APAC departments listed above, are also are able to access trading information on an as needed basis to provide “follow-the-sun” coverage, for the purpose of providing back-up or emergency technical support, and to provide technology design and development support.

Further details on access to information by Liquidnet employees are set out in the Liquidnet Order Handling Q & A Document, which is available in the Member’s section of the Liquidnet website.

[^6]: Where a local broker is unable for any reason to report a trade, Liquidnet Asia may seek an alternative broker to report the trade. Where a contra to a trade in Indonesian, Malaysian, Pakistani, Philippines or Thai equities agreed through the Liquidnet Asia System is a Liquidity Partner that is also a broker participant of an exchange in the same market (e.g., a Malaysian Liquidity Partner that is a participant of Bursa Malaysia), then that Liquidity Partner will report the trade to the local exchange, rather than the local broker identified in this Schedule.

[^7]: Members and Trading desk customers wishing to trade Indian, Korean and Taiwanese equities in the Liquidnet Asia System must also be a client of Morgan Stanley for those markets and the investor identities must be identified to Morgan Stanley in accordance with local rules and regulations for trading in those markets.

[^2]: Commencing on or after 2 October 2019

[^3]: Default minimum order size is the lesser of US$100,000 and 5% of ADV

© 2020 Liquidnet Asia Limited is regulated by the Hong Kong Securities and Futures Commission for Type 1 and Type 7 regulated activities and is regulated by the Monetary Authority of Singapore as a Recognized Market Operator. Liquidnet Japan Inc. is regulated by the Financial Services Agency of Japan and is a member of JSX/JBF. Liquidnet Australia Pty Ltd is registered with the Australian Securities and Investment Commission as an Australian Financial Services Licensee, AFSL number 312525, and is registered with the New Zealand Financial Markets Authority as a Financial Service Provider, FSP number FSP3781. Liquidnet Singapore Private Limited is regulated by the Monetary Authority of Singapore as a Capital Markets Services Licensee, CMSL number CMS100757-1.
Schedule B - Details of Targeted Invitation Functionality

The below sets out a summary of the operation of the Targeted Invitation functionality. Please refer to the Liquidnet Trading Rules for full details and contact your Relationship Manager if you have any questions or wish to opt-in to this functionality.

1. Qualifying Members

All Members and customers are able to send targeted invitations. However, only Qualifying Members are able to receive targeted invitations. The criteria are set out below and are determined on a quarterly basis based on a Member’s activity during the two prior calendar quarters.

To qualify for any quarter, a Member must meet either of the following conditions⁸:

- Average daily liquidity of USD $100M or more (or equivalent in other currencies) provided to Liquidnet during either of the two prior quarters
- Any liquidity provided to Liquidnet during either of the two prior quarters and positive action rate (PAR) of 40% or higher during either of the two prior quarters.

Positive action rate (PAR) relates to Member activities around matches. Positive action means going active on a match, sending an invite to an active contra or using the auto-negotiation functionality and the PAR is the percentage of matches where a party takes a positive action.

Members that are not Qualifying Members, as well as Trading desk customers, cannot receive Targeted Invitations.

2. Manual Targeted Invitations

(a) Creating a manual targeted invitation

A Member that has an indication in a specific stock available for matching in the Liquidnet Asia System but that is not currently matched can use the Liquidnet desktop application to create a manual targeted invitation notification. When creating the manual targeted invitation, the Member must specify the quantity⁹, minimum execution size, limit price, maximum number of recipients for sending invitations, lookback period and time-in-force. A targeted invitation represents a firm order available for matching in the Liquidnet Asia System in the same manner as other orders using the auto-negotiation functionality, except that a manual targeted invitation cannot match with orders from Liquidity Partners.

---

⁸ Any exceptions subject to determination by Liquidnet on an objective and non-discriminatory manner
⁹ Subject to a default minimum quantity for targeted invitations of the lesser of USD1.5million or 25% average daily volume (or the default minimum order size for the market if average daily volume is not available)
Targeted invitations are only available when the relevant public exchange is open for trading.

By default, a targeted invitation is sent to traders at Qualifying Members where the recipient trader meets any of the following criteria:

- **Opposite-side indication in Liquidnet.** The Liquidnet Asia System received an opposite-side indication from the recipient at any time during the look-back period, where the available quantity was at least the default minimum quantity for targeted invitations.

- **Opposite-side indication placed away.** The recipient has or had an opposite-side indication in its order management system at any time during the look-back period where the quantity placed at other brokers is or was at least the default minimum quantity for targeted invitations.

- **Opposite-side execution in Liquidnet.** The recipient executed in the Liquidnet Asia System with anyone at any time during the look-back period, where the recipient executed on the opposite-side to the sender’s order (for example, the recipient executed a buy order and the sender’s targeted invitation is a sell order) and the recipient’s execution quantity was at least the default minimum quantity for targeted invitations.

- **Executed against sender.** The recipient executed in the Liquidnet Asia System against the sender at any time during the look-back period, where the execution quantity was at least the default minimum quantity for targeted invitations.

- **Invited the sender.** The recipient sent the sender a negotiation invitation or targeted invitation at any time during the current trading day.

The look-back period can be (i) only the current trading day; or (ii) the current trading day and up to 90 preceding trading days as determined by the sender.

A Member creating the manual targeted invitation has the further option to restrict recipients to only those that executed against the sender and/or invited the sender.

A sender of a manual targeted invitation is notified when a recipient indicates interest and requests more time. If a trader elects to have his or her manual targeted invitation order automatically cancelled when all recipients have dismissed the targeted invitation notification, the trader can determine that all of the targeted invitation notifications sent by the sender have been dismissed by any recipients.

---

10 Subject to exceptions to minimize the likelihood of the recipient having the same side indications
(b) Receiving a targeted invitation

A recipient of a targeted invitation is notified through the Liquidnet desktop application. The recipient can act to make an opposite-side indication or order available for matching in the Liquidnet Asia System with the sender’s order.

The notification includes the stock code and the sender’s minimum execution size, but the recipient must take an action through the Liquidnet desktop application to see the minimum execution size.

On receipt of a targeted invitation, in addition to making an opposite side indication or order available for matching in the Liquidnet Asia System, the recipient can either (i) notify the sender that the recipient is interested and request more time to respond to the targeted invitation or (ii) dismiss the notification.

3. **Targeted Invitation from algos**

The description above relating to targeted invitations that do not specifically reference manual targeted invitations are also applicable to targeted invitations from algos, except as otherwise set forth below.

(a) Enabling targeted invitations from algos

Liquidnet Asia will not send a targeted invitation for an algo order unless the Member or Trading desk customer has consented. The consent process depends on the method you use to transmit orders to Liquidnet Asia. Please contact your Relationship Manager for more details. Subject to consent, Liquidnet Asia can send a targeted invitation notification for an algo order to qualifying recipients. Liquidnet Asia applies the following default configurations:

- Maximum number of recipients – 5
- Look-back period – 20 preceding trading day
- Minimum execution size – default minimum quantity for targeted invitations
- Time-in-force – the same as the associated order

Members and Trading desk customers can request Liquidnet Asia to adjust the default configurations.
(b) Guidelines for determining when to send targeted invitations from algos

Liquidnet Asia does not automatically send a targeted invitation notification. Instead, Liquidnet Asia estimates the quantity that the order will execute externally over a period of time and the expected remaining quantity for the order over that time period. If the expected remaining quantity for the order after a period of time determined by Liquidnet Asia will be below the minimum execution size for targeted invitations for the applicable region, Liquidnet Asia will not send a targeted invitation for the algo order. In addition, Liquidnet Asia’s systems can (i) delay the sending of targeted invitations for an order that can route externally, to allow for external block executions, and (ii) restrict the sending of a targeted invitation for any order (including Liquidnet-Only) to the circumstance where the size of the order is a specified multiple of the minimum execution size for the applicable region. These guidelines for sending Targeted Invitations only apply if the Member or customer has consented to Liquidnet Asia sending a targeted invitation for their algo orders.

(c) Cancellation of targeted invitations from algos

Liquidnet Asia will cancel any targeted invitation notifications for an order upon the occurrence of any of the following:

- **Remaining order size.** The sender’s remaining order size is below the minimum quantity for targeted invitations.
- **Limit price.** At a specific time and 61 seconds after that, (i) the limit price of the sender’s buy order is lower than the best bid (or mid-price, if the sender has a mid-point or better instruction) or (ii) the limit price of the sender’s sell order is higher than the best offer (or mid-price, if the sender has a mid-point or better instruction).
- **Cancellation of associated order.** The sender cancels the associated order, and, in the case of a lowtouch order, a period of three seconds has elapsed.
- **Expiration of associated order.** The associated order expires.
- Expiration or cancellation of a targeted invitation notification does not affect the associated order.

(d) Resending of a targeted invitation after a cancel

Liquidnet Asia can resent a targeted invitation after a cancel in accordance with the guidelines described above, except the fixed delay period runs from the most recent cancel of the targeted invitation.
4. Liquidnet Virtual High Touch® Liquidity Opportunities

When a Member is opted-in for manual targeted invitations has an unmatched indication in the Liquidnet Asia System, Liquidnet Asia will notify such Member through the Liquidnet desktop application when one of the following has occurred in the same symbol:

- There was a Liquidnet execution in the symbol earlier that trading day reported through the desktop application and the Member has opted to have its intra-day Liquidnet executions reported through the Liquidnet desktop application
- The Member had a matched indication in the symbol earlier that trading day
- The Member failed to respond to a targeted invitation notification in the symbol earlier that trading day
- The Member received an invitation to negotiate in the symbol earlier that trading day
- The Member had a Liquidnet execution in the symbol earlier that trading day.

The purpose of the notification is to prompt a Member to create a targeted invitation for that unmatched indication.
