Tunny Cryptogram

This puzzle consists of a short piece of encrypted text with the title giving you a clue. The cipher used to encrypt the text is simple enough that the cryptogram can be solved by hand.

The encrypted message is shown as a group of numbers below the dashes, with each number representing a letter and each group of numbers representing a word. You have to work out what letter each of the numbers represents and then decode the message.

We have simplified the process by not including actual numbers in the message but show them instead. The only clue we will give is that each number represents the same letter, unlike real encryption where each number may represent different letters.

The table below should help you record your decryption of each number and then be used to decode the full message.

```
| A | B | C | D | E | F | G | H | I | J | K | L | M | N | O | P | Q | R | S | T | U | V | W | X | Y | Z |
```

```
42
3 18 2 23 24 4 1 4 14 19 26 5 23 2 12 20 14 5 19 24 23
```

```
