Re: S.T.O.P. Comment on NYPD’s Draft Criminal Group Database Impact & Use Policy

Dear Commissioner Shea:

The Surveillance Technology Oversight Project (“S.T.O.P.”)\(^1\) hereby submits our comment in response to the Draft Criminal Group Database Impact and Use Policy (“Policy”) published by the New York City Police Department (“NYPD”) on January 11, 2021 pursuant to the Public Oversight of Surveillance Technology Act (“POST Act”). Not only did S.T.O.P. work extensively to promote passage of the POST Act, the law’s enactment was one of the reasons we were founded. Sadly, upon review, the Policy is so grossly inadequate that it not only undermines public trust and accountability, it violates the NYPD’s reporting obligations under the POST Act.

Instead of publishing an impact statement that tells New Yorkers what surveillance tools the NYPD uses, we were provided copy-and-paste responses that are opaque, misleading, and, at times, blatantly wrong. As written, the Policy primarily tell New Yorkers one thing: the NYPD cannot be trusted to use the Criminal Group Database.

**Data Sharing Agreements**
The POST Act requires the NYPD to enumerate all entities which are able to access the Department’s Criminal Group Database data. However, instead of providing any meaningful information, the Policy merely states that unspecified “agencies at the local, state, and federal level . . . have limited access to NYPD computer and case management systems.” At a minimum, the Department must provide a full accounting of all agencies that access such data, along with the frequency of access and any limitations on how such data is used and retained. The NYPD would also need to provide a copy of any/all agreements with external agencies pertaining to the scope of agency access and the volume of data retained.

Even worse, we already know that the Criminal Group Database is being used to help ICE track and deport New Yorkers. We know that the date collected as part of the Criminal Group Database is shared with federal agencies through fusion centers and information pooling agreements. This type of information sharing, using local police to help federal official track and deport our neighbors, is in direct contravention of both the draft policy and New York’s long history of sanctuary city

\(^1\) S.T.O.P.” is a non-profit organization that advocates and litigates for New Yorkers’ privacy rights, fighting discriminatory surveillance. For more information see https://www.stopspying.org/.
protections. When the Department claims “Information is not shared in furtherance of immigration enforcement,” it is a lie. Not a slight exaggeration, but a clear and explicit lie. This policy only proves that the NYPD cannot be entrusted with a system as powerful as the Criminal Group Database, and the system must be banned.

**Vendors and Product Disclosure**

Perhaps no aspect of the Policy is more antithetical to the text and spirit of the POST Act than the Department’s systematic failure to specify the make and model of equipment used for the Criminal Group Database. The driving impetus for the POST Act was the Department’s historical failure to disclose what tools it purchased to monitor New Yorkers until years or decades after the fact. This type of surreptitious procurement is antithetical to democratic government and the role of the City Council in overseeing agency purchases. Rather than comply with the POST Act’s reporting obligations, the Policy describes the Department’s Criminal Group Database program in vague, non-descript terms. The Policy fails to include a single vendor name, let alone the comprehensive listing of tools that lawmakers required to be provided. At a minimum, the revised policy must include the name of every single Criminal Group Database system employed by the NYPD, the system’s manufacturer, and the names of any other vendors involved in creating or operating the system. The NYPD should also provide a comprehensive evaluation of what data is accessed and/or retained by vendors.

**Racial Ethnic, and Religious Bias**

Racial discrimination and bias have defined New York City’s policing since before the NYPD was even founded, and that deadly legacy of injustice has continued to this day. The POST Act provided the Department with a unique opportunity to address the ways that its surveillance operations have been driven by, and in turn fueled, discrimination for decades. Sadly, rather than addressing this challenge head on, the Department simply ignored the POST Act’s requirements, responding with a terse and unbelievable claim that “The NYPD prohibits the use of racial and bias-based profiling in law enforcement actions.” This statement is patently absurd. The NYPD has long been emblematic to the country as a symbol of biased-policing, and after the Department’s violent and discriminatory response to recent protests, it’s clear just how little has changed.

The Criminal Group Database exacerbates officers’ bias, discriminating against BIPOC and LGBTQ+ communities, putting over-surveilled New Yorkers at risk of wrongful arrests and worse. Universities, civil society organizations, and even the U.S. federal government proved that Criminal Group Database is biased and broken. The technology has no place within New York City’s law enforcement.

According to the NYPD’s own testimony before the New York City Council, the Criminal Group Database is almost 99% non-white. The database routinely excludes right-wing extremists, white supremacists, and conservative conspiracy theorists. This omission has been a point of contention for years, and one of the leading reasons that so many New Yorkers wish to eliminate the Criminal Group Database. But it is particularly striking that the NYPD sought to whitewash the Criminal Group Database’s in a policy published just days after the January 6th attack on the U.S. Capitol. At a

---

time when New Yorkers have never been more attuned to the threat of white extremists groups, the NYPD gave us a policy that merely ratifies the segregated status quo of gang policing.

**Retention Periods and Access Rights**

To meet the minimum transparency requirements set out in the POST Act, NYPD must also clarify how long data is saved and how the access rights to the information is determined. The Policy does not provide sufficient information about the retention periods of the data collected through the Criminal Group Database. Instead, the Policy contains broad boilerplate language, referring to “applicable laws, regulations, and New York City and NYPD policies” without disclosing which these are or what they entail. The Department also fails to clearly and coherently describe access rights for NYPD employees and contractors to access this exceptionally sensitive data. Bland phrases stating that access rights are given to personnel with an “articulable need” and that access is “further limited based on lawful duty” are feeble efforts to circumvent the reporting obligations set out in the POST Act.

**NYPD Data Security**

The NYPD is not just asking New Yorkers to allow the Department access to huge volumes of intimate data about our private lives, they want us to let that data to be accessible to anyone who can break into the NYPD’s systems. Sadly, we have no way to judge the risk that this data could fall into the hands of any hacker, criminal, or rogue state that could breach NYPD security measures. That is because the NYPD’s data security promises are full of repetitive and empty phrases. The section contains general descriptions about the safeguards in place for the Department’s case management and computer systems, stating that NYPD uses a “multifaceted approach to secure data and user accessibility.”

Not only is the provided information insufficient to build public trust and accountability, it is also so generic as to be almost completely useless from a technical standpoint. The NYPD references its use of Lightweight Directory Access Protocol, dual factor authentication, Secure Socket Layer, and Transport Layer Security. These rudimentary encryption and security features are so ubiquitous that it would only be notable if they were not used as part of the NYPD’s data security policy. This is about as persuasive as arguing that a car is safe simply because it has functioning seatbelts; the real surprise would be finding a car that did not. The enormous amounts of highly sensitive data processed through the NYPD’s Criminal Group Database systems call for higher security standards than what is described in the Policy.

**NYPD Training**

The Policy recognizes the self-evident truth that training is an important factor for the NYPD’s use of the Criminal Group Database. For example, the Policy states that every NYPD employee who gain access to Criminal Group Database must first complete a “mandatory training related to use of the technology.” Sadly, this is not the introductory clause to an expansive training policy, this is almost the whole of the Policy’s details on the topic. The Policy’s training section is grossly insufficient to say the least. The Policy leaves unclear if officers are still trained to use pseudoscientific techniques or other approaches that would increase the error rate of the Criminal Group Database.
Comparison of the POST Act to other CCOPS Jurisdictions
The Department’s failure to provide the public with meaningful details is particularly egregious in light of the strong national record of compliance with analogous efforts. As of today, more than a dozen localities have adopted Community Control Over Police Surveillance (CCOPS). The POST Act is an outlier, both in that it is one of the weakest laws in the country and because the NYPD’s response has shown an unprecedented effort to circumvent even the most minimal transparency requirements. While many municipalities’ legislations require acquisition approval, bans non-disclosure agreements and provide a right of action for private citizens, the POST Act only requires the NYPD to provide annual reports and use policies. Notwithstanding this, the NYPD is unable to meet the requirements set out in the POST Act, by only providing opaque or boiler-plate responses in the Policy, hiding the details needed for meaningful public engagement. As a result, it is clear that more aggressive legislative responses are required, including a complete ban on the NYPD’s use of Criminal Group Database.

Monitoring Political Rallies
The Policy falsely states that the NYPD does not use Criminal Group Database to identify or monitor people in crowds or at political rallies. Not only is this statement inconsistent with existing NYPD policy, as documented in the Department’s Patrol Guide, it ignores documented instances of protest surveillance. None of these facts are addressed by the Policy. To the contrary, the Policy’s false, boilerplate reassurance undermines the very transparency and accountability the POST Act was enacted to support. More consequentially, this type of misstatement may be a violation of the NYPD’s reporting obligations, exposing the Department to civil legal penalties.

Concluding Remarks
The cumulative impact of the foregoing errors and omissions is clear: the NYPD is breaking the law. The POST Act is not a formality, it is not a nicety, it is binding legislation with full force of law. When the NYPD fails to comply with the statute, it seeks to overturn the will of the New York’s elected leaders, accomplishing by force what it failed to do through lobbying. If the NYPD persists in this flagrant disregard for its statutory reporting requirements, it will simply hasten the enactment of far more sweeping changes to the Department’s surveillance powers in the coming months.

Sincerely,

/s/
Albert Fox Cahn, Esq.
Executive Director
