RE: FY 2023 Funding for National Wildlife Refuge System Operations and Maintenance

Dear Chairs and Ranking Members:

Thank you for your continued work to ensure the integrity of our national wildlife refuges. The National Wildlife Refuge System (Refuge System) is the largest network of public lands and waters dedicated to wildlife conservation. We appreciated the small increase in the fiscal year (FY) 2022 budget for the Refuge System to help address fixed costs like salary increases; however, it did not address systemic needs of the Refuge System compounded by a decade of underfunding. Current funding is only $16 million over the FY 2010 level in nominal value. The Refuge System needs a substantial increase in funding to account for inflationary costs, salary increases, and the significant increase in visitation and land base of the Refuge System. In this age of rapidly worsening biodiversity and climate crises, we must invest as much funding as possible today so these protected areas are available tomorrow for shifting conservation needs.
The undersigned groups are writing to express support for continued funding increases, and request that the appropriations committee allocate at a minimum $574 million – the funding level in the House-passed Interior, Environment and Related Agencies appropriations bill – for National Wildlife Refuge System operations and maintenance in the final FY 2023 appropriations legislation. Our millions of members – bird watchers, hikers, hunters, anglers, wildlife professionals, and conservationists – use and enjoy national wildlife refuges and support careful stewardship of the System for their own and future generations.

The Refuge System has grown since 2010, when funding was at its highest level, adding 2 million land acres, 13 national wildlife refuges, and 597 million acres of marine national monuments. Visitation has increased 38% since 2010 and rose markedly in FY 2020 and FY 2021, to more than 60 million visitors, as Americans turned to national wildlife refuges for safe places to recreate during the COVID-19 pandemic, including for wildlife dependent recreation like angling, hunting, wildlife observation, and education. Yet, funding levels have not kept pace with the increase in visitors and other operations and maintenance needs.

As funding levels have plummeted, the Service has had to eliminate more than 1,000 full-time positions – 25 percent of staff. Staffing shortages have put additional pressures on the System. Funding is not available to hire biologists, visitor services staff, law enforcement, and maintenance staff. These shortages severely hamper the Fish and Wildlife Service’s ability to fulfill its mission on behalf of the American public.

Conservation planning and wildlife and habitat management are crucial to achieving the conservation mission of the Refuge System and fulfilling the purposes of each refuge unit. The 1997 Refuge Improvement Act mandates the creation of Comprehensive Conservation Plans (CCPs) for each refuge or complex of refuges, outlining the general management goals, and those plans are to be updated at least every fifteen years. Currently, there is a backlog of more than 200 comprehensive conservation plans that are older than fifteen years, and therefore out of compliance with the Refuge Improvement Act. We appreciate the $5.684 million that was allocated for conservation planning in the Senate appropriations committee released text, and encourage the conference committee to recede to this Senate funding level.

Invasive species are one of the most serious threats to native plants, fish, and wildlife populations. Increased funding for planning and management will also provide the Service with more of the tools it needs for active water management, habitat management and restoration, and invasive species eradication.

Additionally, the Urban Wildlife Conservation Program, which targets investments in historically excluded communities and seeks to address racial inequalities in recreational access and conservation participation, was not funded at all between 2017 and 2020 and was funded at $6 million in FY 2022. This level is short of what the Service requires to deliver on its commitments to racial equity, social and environmental justice, and natural resources conservation, and we encourage funding increases to this program in the final legislation.

Our national wildlife refuges are essential for protecting biodiversity, climate resilient habitats, and cultural resources, improving landscape connectivity, and expanding recreational opportunities nationwide. Despite the increase provided in FY 2022, funding is far below the FY 2010 inflation adjusted level of $689 million. We appreciate the increased funding levels in the FY23 House-passed bill and Senate committee’s released text, and we urge Congress to pass at
least $574 million for the National Wildlife Refuge System’s operations and maintenance account so the agency can address the growing needs.

Thank you for your consideration of our request.

Sincerely,
