ODIN

RIGGING - ACCESS - RESCUE

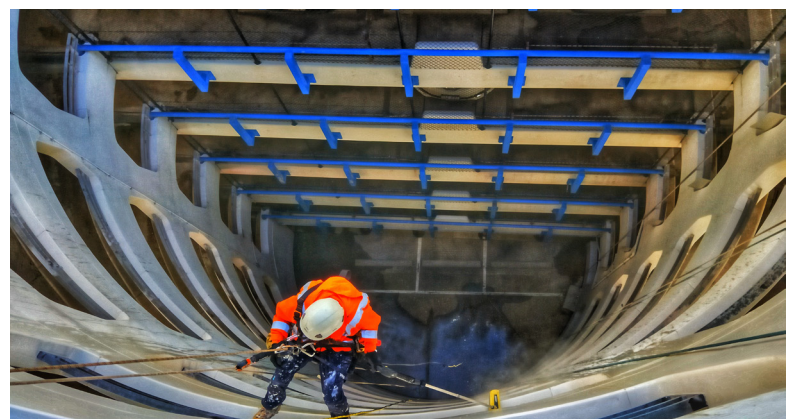

Odin Access are your partners in complex and difficult access environments

Odin Access offers a wide range of services for projects that require complex access solutions. Our approach is efficient, economical, and causes minimal disruptions to traffic, the environment, and workflow. Scaffolding, cranes and elevated work platforms cause interruptions due to prolonged mobilisation and demobilisation times. They require large exclusion zones that cause disruption to traffic and workflow. With the use of rope access techniques, Odin Access can reduce the size of required exclusion zones, maintaining traffic and workflow within your project location. Rope access equipment is compact and light, keeping lead and set up times down.

Odin Access is fully equipped to undertake facade and concrete cleaning projects from light surface agitation cleans through to protective coating or paint removal tasks.

CAPABILITY STATEMENT

ODIN

RIGGING - ACCESS - RESCUE

With the complexities of the natural environment, there are a magnitude of factors to take into consideration. Whether it be a simple slope stabilisation inspection, or a scaling operation requiring loose material removal under the direction of a Geo-technical Engineer, Odin Access are well equipped to assist!

Welding and steel fabrication at heights is a speciality that Odin Access can offer. Our full time Level 3 Rope access supervisor is also a trade qualified Boilermaker and tested welder with over a decade of experience in the industry.

Works performed within confined spaces fall under different legislation and require expert knowledge and experience. Odin Access can assist you to complete the task, maintaining the highest level of safety with our experienced, professional team. We provide and employ rescue plans and procedures, atmospheric testing, breathing apparatus and additional specialised equipment where required.
