The 30/30 Project envisions a world in which healthcare is a human right. Our mission is to increase healthcare access worldwide by providing healthcare infrastructure for communities that lack medical service. Our goal is to construct 30 healthcare projects worldwide that are built to such rigorous standards, that they stand for at least 30 years.

Due to the COVID-19 pandemic, the two final projects were delayed. We are excited to announce that we will break ground on both projects in early 2022.

The 30/30 Project is a five-year initiative of Construction for Change, a registered 501(c)(3).
