B. More Recent Scientific Publications:

4. A NIH randomized study (CALERIE) in 2019 shows that even for non-obese young adults age 21-50, cutting 300 Calories a day without changing their dietary patterns results in a 15-lb weight loss in 2 years and improvement of many major health risk factors. THE LANCET [https://doi.org/10.1016/S2213-8587(19)30151-2](https://doi.org/10.1016/S2213-8587(19)30151-2)

5. 100% Juice to 24% Higher Mortality. REGAARDS Study. JAMA 2019 In a survey of more than 13,000 adults aged 45 years or older from across the U.S., each additional daily 12-ounce serving of fruit juice, independent of other sugar-sweetened beverages, was associated with a 24% increase in the risk for all-cause mortality, in an article published online 5/17/19 in *JAMA Network Open*. Each additional serving of any sugary beverage was associated with an 11% increase in all-cause mortality risk. [https://jamanetwork.com/journals/jamanetworkopen/fullarticle/2733424](https://jamanetwork.com/journals/jamanetworkopen/fullarticle/2733424)

10. Cancer prevention and Lifestyle 2019
Findings from the Canadian Population Attributable Risk of Cancer (ComPARe) study show that in 2015, more than one third of cancers were caused by "largely preventable" lifestyle, environmental, and infectious agent risk factors.
Smoking tobacco remains the king of cancer risk factors, responsible for more than 18% of all cancers diagnosed in 2015. However, the results also show that the combination of physical inactivity, a sedentary lifestyle, and excess weight accounted for an additional 12% of cancer cases.
