AIMS K-12 College Prep Charter District

IPM Plan

(Draft provided by the IPM Institute as part of the IPM STAR or GREEN SHIELD CERTIFIED evaluation process)

AIMS K-12 College Prep Charter District
171 12th St Oakland, CA 94607 & 746 Grand Ave Oakland, CA 94610
510-893-8701

INTRODUCTION

Pests are populations of living organisms (animals, plants, or microorganisms) that interfere with use of healthcare and other facilities for human purposes.

Integrated Pest Management (IPM) is an approach that establishes a sustainable approach to managing pests by combining biological, cultural, physical and chemical tools in a way that minimizes economic, health and environmental risks.

AIMS K-12 College Prep Charter District (AIMS) has adopted this Integrated Pest Management Plan for the buildings and grounds of AIMS. The plan outlines procedures to be followed to protect the health and safety of staff, patients and visitors from pest and pesticide hazards. The plan is designed to voluntarily comply with policies and regulations promulgated by the Department of Agriculture for public buildings and health care facilities.

Objectives of this IPM plan include:

- Elimination of significant threats caused by pests to the health and safety of patients, staff and the public.
- Prevention of loss or damage to structures or property by pests.
- Protection of environmental quality inside and outside buildings.

This IPM plan will be stored in the office of the IPM Coordinator.

IPM COORDINATOR

The Superintendent or designee shall be AIMS IPM Coordinator and be responsible to implement the IPM plan and to coordinate pest management-related communications between AIMS its landlords, service providers, staff and patients.

The Superintendent shall designate an employee at each AIMS managed facility to serve as the IPM Site Coordinator for the site.

IPM COMMITTEE

AIMS will maintain an IPM or other safety-related committee with responsibility for annual review of the IPM program and for assisting the IPM Coordinator in resolving pest-related issues. The committee will address IPM issues as needed and at least annually. Minutes will be taken of committee meetings and kept on file by the IPM Coordinator. Membership will include the IPM Coordinator and IPM Site Coordinators, and may also include community members, health advocates, patients and representatives.

POSTING AND NOTIFICATION OF PESTICIDE APPLICATIONS

The IPM Coordinator shall be responsible to annually notify patients and guardians of the procedures for requesting notification of planned and emergency applications of pesticides in facility buildings and on facility grounds.
When pesticide applications are scheduled in AIMS-managed buildings or on grounds, AIMS Service Providers and staff shall provide notification in accordance with law, including:

1. Posting a pest control information sign with the date, time and location of the application and the product applied in an appropriate area and including contact information for additional details.

2. Providing this information to all individuals working in the building.

3. Providing this information to all patients and guardians who have requested notification of individual applications of pesticides.

Where pests pose an immediate threat to the health and safety of patients or employees, AIMS may authorize an emergency pesticide application and shall notify by telephone any guardian who has requested such notification. Disinfectants, anti-microbials and self-contained or gel-type pesticide baits applied in inaccessible areas are exempt from posting, notification and the 7-hour reentry requirement.

RECORD KEEPING & PUBLIC ACCESS TO INFORMATION
AIMS will maintain records of all Service Provider visits and pest control treatments for at least three (3) years. Information regarding pest management activities will be made available to the public at the AIMS’s administrative office. Requests to be notified of pesticide applications may also be made to this office. All guardians will be informed of their option to receive notification of all pesticide applications at enrollment and once annually.

TRAINING
All AIMS staff will be provided with training on AIMS IPM policy at hire and during annual update training. Training will include the rationale for the IPM policy and program and specific elements including use of the pest-sighting log and prohibition on pesticide applications by non-certified individuals.

Additionally, designated staff including the IPM Coordinator, IPM Site Coordinators and those who conduct regular inspections of AIMS facilities will receive advanced training on identifying pest infestations and pest-conducive conditions. This training will improve the ability of AIMS staff to oversee Service Providers and AIMS staff compliance with AIMS IPM policy and plan.

GENERAL IPM STRATEGIES
Pest management strategies may include education, exclusion, sanitation, maintenance, biological and mechanical controls, and pre-approved, site-appropriate pesticides.

An Integrated Pest Management decision at AIMS shall consist of the following steps:

1. Identify pest species.

2. Estimate pest populations and compare to established action thresholds.

3. Select the appropriate management tactics based on current on-site information.

4. Assess effectiveness of pest management.

5. Keep appropriate records.

Decisions concerning whether or not pesticides should be applied in a given situation will be based on a review of all available options. Efforts will be made to avoid the use of pesticides by
adequate pest proofing of facilities, good sanitation practices, selection of pest-resistant plant materials, and appropriate horticultural practices.

When it is determined that a pesticide must be used in order to meet pest management objectives, the least-hazardous material, adequate for the job, will be chosen.

All pesticide storage, transportation, and application will be conducted in accordance with the requirement of the Federal Insecticide, Fungicide, and Rodenticide Act (7 United States Code 136 et seq.), Environmental Protection Agency regulations in 40 CFR, Occupational Safety and Health Administration regulations, AIMS policies and procedures, and local ordinances.

No person shall apply, store, or dispose of any pesticide on AIMS managed property without an appropriate pesticide applicator license. All pesticide applicators will be trained in the principles and practices of IPM and the use of pesticides approved for use by AIMS. All applicators must comply with the IPM policy and follow appropriate regulations and label precautions when using pesticides in or around AIMS facilities.

Pest-specific strategies will be included in the IPM Program Specifications provided to each service provider.

AIMS SERVICE PROVIDER ROLES
AIMS service providers including cleaning, pest control and landscape maintenance will be guided by written and signed contracts including AIMS-developed IPM program specifications for structural pest control providers.

Service providers will be directed to provide special attention to pest-vulnerable areas including food storage, preparation and serving areas; washrooms; custodial closets; mechanical rooms and entryways into the building.

Service providers or other IPM experts will be asked to provide input on any AIMS facility renovation or reconstruction projects including reviewing plans for pest-conducive conditions, suggesting pest-proofing measures and inspecting construction where applicable to prevent and avoid pest problems.

AIMS STAFF ROLES
AIMS administration will provide support to assist the IPM Coordinator in maintaining an IPM program that relies on minimal pesticide use. Such support will include efforts to promptly address any structural, horticultural, or sanitation changes recommended by the coordinator to reduce or prevent pest problems.

Furthermore, AIMS administration will assist the Coordinator in developing and delivering materials and programs for staff, students, and the public to educate them about the importance of good sanitation and pest control.

The facility operations department is responsible for ensuring staff compliance with the IPM policy and plan, including the attached check list.

PEST-SPECIFIC STRATEGIES
The following strategies will be used for frequently encountered pests:

1. **ANTS**
   a. Ants will be identified to species to aid in locating nesting sites, preferred food, habits and appropriate baits when necessary.
   b. Ants inside buildings will be cleaned up with soapy water, including the areas ants are traversing to eliminate any pheromone recruiting trail, which ants deposit to help other ants find the location of food and water sources.
c. Maintenance will be informed and the opening providing entry for ants into the building will be located and repaired.

d. Building and room occupants will be informed of any action they need to take to prevent future problems, e.g., cleaning up spilled food or drink more promptly or thoroughly, storing food in sealed containers, repairing leaking or dripping pipes or faucets, etc.

e. If the above steps fail to correct the problem, the contractor will inform the IPM Coordinator and discuss additional steps, such as more extensive repairs, changes in the food policy, changes in exterior landscaping to remove ant habitat, or selection of least-toxic pesticide baits or gels, preferably in manufactured tamper-resistant bait stations placed in areas inaccessible to children or other building occupants.

ADD MORE PESTS AS APPROPRIATE. THE IPM INSTITUTE CAN ASSIST IN COMPLETING THE PLAN, CONTACT US FOR MORE INFORMATION.
