Summary of Accreditation Decision

*University of Nebraska, Lincoln*

The interior design program leading to the Bachelor of Science in Design degree meets Council for Interior Design Accreditation (CIDA) Professional Standards and has been awarded accreditation for a term of six years, effective August 2020. The Accreditation Commission is pleased to recognize this achievement.

The Accreditation Commission’s decision was based on the interior design program’s demonstrated achievement of sixteen accreditation standards, which are evaluated within the context and overarching purpose and intent of the program. CIDA accreditation standards broadly address the evolving components of graduate preparation for interior design practice, including:

- critical thinking, professional values, and processes that provide the framework of interior design practice;
- core design and technical knowledge that provide the historical, theoretical, and technical contents of interior design practice.

CIDA accreditation standards also address the institutional systems, structures, and resources that are fundamental to providing an effective higher education learning environment for interior design.

Award of CIDA accreditation attests to the quality of the interior design program and benefits the public and program in many ways. Parents, students, and employers of graduates can be assured that the program meets the rigor of peer review and develops the skills and knowledge required to practice interior design. Furthermore, the accreditation process provides the program with valuable input for continued development and assists the program in adapting to meet evolving professional requirements as CIDA updates standards.

In three years, the interior design program will be required to submit a Progress Report to CIDA addressing ongoing program development, as well as the following Standards:

**Standard 7. Human-Centered Design.** Interior designers apply knowledge of human experience and behavior to designing the built environment.

**Standard 14. Environmental Systems and Comfort.** Interior designers use the principles of acoustics, thermal comfort, and indoor air quality in relation to environmental impact and human wellbeing.

The program is scheduled to be revisited in fall 2026 to seek re-accreditation.
