OUR 21ST CENTURY LEARNING MODEL

The term “21st century skills” refers to core competencies students need to be successful in the competitive 21st century economy. Collaboration, digital literacy, critical thinking, and problem-solving are necessary for students to thrive in today’s world.

Students growing up in the 21st century face new opportunities and challenges and together, we support young minds in academic, social and behavioral growth by building skills and awareness around **how, why and what** we need to be independent learners.

OUR APPROACH

STEP #1: IDENTIFY CHALLENGES & BUILD AWARENESS

We identify an individual's needs and challenges in form of lagging skills. Then, we bring awareness to how these unsolved problems affect the student's social, emotional, behavioral and academic life.

STEP #2: TEACH & REINFORCE POSITIVE STRATEGIES

We empower students to learn the following skills and strategies and provide them with opportunities for practice. Then, students apply these techniques in contexts in which they are needed and we reinforce all progress made on the development to foster intrinsic motivation and cultivate independence.

SOCIAL & EMOTIONAL SKILLS:

Transitions
Social Awareness

Self-Regulation
Collaboration

Emotional Regulation
Positive Peer Interactions

EXECUTIVE FUNCTIONING SKILLS:

Attention & Focus
Memory & Reasoning

Goal Planning
Time Management

Critical Thinking
Planning & Organization

ACADEMIC SKILLS:

Math
Reading & Writing

Subject Matter
Study Skills

Learning Strategies
Technology Skills

STEP #3: APPLY & MAINTAIN KNOWLEDGE

Coaches and tutors support students in maintaining new skills and strategies as they apply them to all areas of their lives. As students become motivated by their new found success, they pave the way for further independent growth and development.
