

## Application

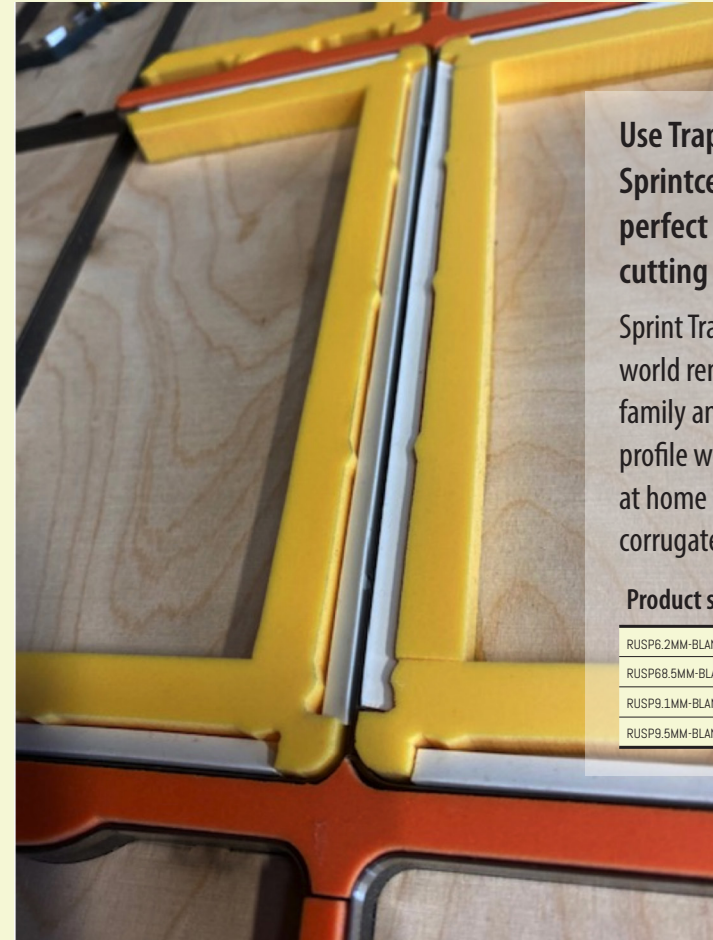

**Corrugated board** - Used to assist combatting board swarf (fragmentation), the Trapezium profile also supports the liners on common cuts (where cartons are butted together or share the same rule).

When used in conjunction with our Sprintcell rubber range the Trapezium profile range offers the perfect combination of performance and platen speed that enhances your die and die cutting process.

**Solid carton board** – Works well on window cut outs or areas where you need to reduce bruising of the printed surface.

## Features and benefits

- In excess of 1.5 million impressions
- UV resistant
- High resistance to heat
- Unique profile reduces nicking and delamination
- Approved for direct food contact
- 70 shore

**Use Trapezium and Sprintcell rubbers for the perfect corrugated die cutting performance.**

Sprint Trapezium is part of the world renowned Sprintrubba family and offers a unique profile which is equally at home on solid board or corrugated material.

### Product sizes
