

C&T Matrix bottom/lower stripping pins have been designed for longevity and on press performance. Brass composite is used for the body of the pin, which self-lubricates the needle for a smooth action.

Air escape holes are added on the body of the pin to reduce wear.

The pin needles themselves are made from hardened steel, which ensures optimum performance and waste removal.

The bottom/lower stripping pins are available for all cutters Bobst, Heidelberg, Iberica and Brausse.

Other machine types available upon request.

D=15mm with elongated hard nickel bushing and hardened needle 4mm
Order code: YSTPFA4MM

D=10mm with needle 4mm
Order code: YSTPF4MM

D=8mm with hardened needle 2.5mm
Order code: YSTPF2.5MM

D=8mm with hardened needle 1.5mm
Order code: YSTPF1.5MM
